

Full Contents

Preface xi

1. Introduction 1

- 1.1 How to Use This book 2
- 1.2 Brain Facts Brief 2
- 1.3 Mathematical Preliminaries 4
- 1.4 Units 7
- 1.5 Sources 8

2. The Passive Isopotential Cell 9

- 2.1 Introduction 9
- 2.2 The Nernst Potential 11
- 2.3 Membrane Conductance 12
- 2.4 Membrane Capacitance and Current Balance 12
- 2.5 Synaptic Conductance 14
- 2.6 Summary and Sources 15
- 2.7 Exercises 16

3. Differential Equations 21

- 3.1 Exact Solution 21
- 3.2 Moment Methods* 23
- 3.3 The Laplace Transform* 25
- 3.4 Numerical Methods 27
- 3.5 Synaptic Input 28
- 3.6 Summary and Sources 29
- 3.7 Exercises 29

4. The Active Isopotential Cell 33

- 4.1 The Delayed Rectifier Potassium Channel 34
- 4.2 The Sodium Channel 36
- 4.3 The Hodgkin-Huxley Equations 37
- 4.4 The Transient Potassium Channel* 40
- 4.5 Summary and Sources 43
- 4.6 Exercises 43

5. The Quasi-Active Isopotential Cell 49

- 5.1 The Quasi-Active Model 49
- 5.2 Numerical Methods 51
- 5.3 Exact Solution via Eigenvector Expansion 54
- 5.4 A Persistent Sodium Current* 58

- 5.5 A Nonspecific Cation Current that is Activated by Hyperpolarization* 59
- 5.6 Summary and Sources 60
- 5.7 Exercises 61

6. The Passive Cable 67

- 6.1 The Discrete Passive Cable Equation 67
- 6.2 Exact Solution via Eigenvector Expansion 69
- 6.3 Numerical Methods 71
- 6.4 The Passive Cable Equation 73
- 6.5 Synaptic Input 78
- 6.6 Summary and Sources 81
- 6.7 Exercises 82

7. Fourier Series and Transforms 87

- 7.1 Fourier Series 87
- 7.2 The Discrete Fourier Transform 89
- 7.3 The Continuous Fourier Transform 94
- 7.4 Reconciling the Discrete and Continuous Fourier Transforms 95
- 7.5 Summary and Sources 98
- 7.6 Exercises 98

8. The Passive Dendritic Tree 103

- 8.1 The Discrete Passive Tree 103
- 8.2 Eigenvector Expansion 105
- 8.3 Numerical Methods 107
- 8.4 The Passive Dendrite Equation 110
- 8.5 The Equivalent Cylinder* 111
- 8.6 Branched Eigenfunctions* 113
- 8.7 Summary and Sources 115
- 8.8 Exercises 115

9. The Active Dendritic Tree 119

- 9.1 The Active Uniform Cable 120
- 9.2 On the Interaction of Active Uniform Cables* 122
- 9.3 The Active Nonuniform Cable 125
- 9.4 The Quasi-Active Cable* 130
- 9.5 The Active Dendritic Tree 134
- 9.6 Summary and Sources 136
- 9.7 Exercises 136

10. Reduced Single Neuron Models	143	14.5 Summary and Sources	233
10.1 The Leaky Integrate-and-Fire Neuron	143	14.6 Exercises	233
10.2 Bursting Neurons	146	15. Quantification of Spike Train Variability	237
10.3 Simplified Models of Bursting Neurons	147	15.1 Interspike Interval Histograms and Coefficient of Variation	238
10.4 Summary and Sources	152	15.2 Refractory Period	239
10.5 Exercises	153	15.3 Spike Count Distribution and Fano Factor	240
11. Probability and Random Variables	155	15.4 Renewal Processes	240
11.1 Events and Random Variables	155	15.5 Return Maps and Empirical Correlation Coefficient	243
11.2 Binomial Random Variables	157	15.6 Summary and Sources	245
11.3 Poisson Random Variables	159	15.7 Exercises	246
11.4 Gaussian Random Variables	159	16. Stochastic Processes	251
11.5 Cumulative Distribution Functions	160	16.1 Definition and General Properties	251
11.6 Conditional Probabilities*	161	16.2 Gaussian Processes	252
11.7 Sum of Independent Random Variables*	162	16.3 Point Processes	254
11.8 Transformation of Random Variables*	163	16.4 The Inhomogeneous Poisson Process	257
11.9 Random Vectors*	164	16.5 Spectral Analysis	259
11.10 Exponential and Gamma Distributed Random Variables	167	16.6 Summary and Sources	262
11.11 The Homogeneous Poisson Process	168	16.7 Exercises	262
11.12 Summary and Sources	170	17. Membrane Noise*	267
11.13 Exercises	170	17.1 Two-State Channel Model	267
12. Synaptic Transmission and Quantal Release	175	17.2 Multistate Channel Models	270
12.1 Basic Synaptic Structure and Physiology	175	17.3 The Ornstein-Uhlenbeck Process	271
12.2 Discovery of Quantal Release	177	17.4 Synaptic Noise	272
12.3 Compound Poisson Model of Synaptic Release	178	17.5 Summary and Sources	275
12.4 Comparison with Experimental Data	180	17.6 Exercises	275
12.5 Quantal Analysis at Central Synapses	181	18. Power and Cross Spectra	279
12.6 Facilitation, Potentiation, and Depression of Synaptic Transmission	183	18.1 Cross Correlation and Coherence	279
12.7 Models of Short-Term Synaptic Plasticity	186	18.2 Estimator Bias and Variance	280
12.8 Summary and Sources	189	18.3 Numerical Estimate of the Power Spectrum*	282
12.9 Exercises	190	18.4 Summary and Sources	286
13. Neuronal Calcium Signaling*	193	18.5 Exercises	286
13.1 Voltage-Gated Calcium Channels	195	19. Natural Light Signals and Phototransduction	291
13.2 Diffusion, Buffering, and Extraction of Cytosolic Calcium	198	19.1 Wavelength and Intensity	291
13.3 Calcium Release from the ER	201	19.2 Spatial Properties of Natural Light Signals	293
13.4 Calcium in Spines	209	19.3 Temporal Properties of Natural Light Signals	293
13.5 Presynaptic Calcium and Transmitter Release	213	19.4 A Model of Phototransduction	294
13.6 Summary and Sources	217	19.5 Summary and Sources	297
13.7 Exercises	217	19.6 Exercises	298
14. The Singular Value Decomposition and Applications*	223	20. Firing Rate Codes and Early Vision	299
14.1 The Singular Value Decomposition	223	20.1 Definition of Mean Instantaneous Firing Rate	299
14.2 Principal Component Analysis and Spike Sorting	226	20.2 Visual System and Visual Stimuli	300
14.3 Synaptic Plasticity and Principal Components	228	20.3 Spatial Receptive Field of Retinal Ganglion Cells	301
14.4 Neuronal Model Reduction via Balanced Truncation	230	20.4 Characterization of Receptive Field Structure	303
		20.5 Spatio-Temporal Receptive Fields	306

20.6	Static Nonlinearities*	308	26.4	Maximum Likelihood	372
20.7	Summary and Sources	308	26.5	Estimation Error and the Cramer–Rao Bound*	374
20.8	Exercises	309	26.6	Population Coding in the Superior Colliculus	375
21.	Models of Simple and Complex Cells	311	26.7	Summary and Sources	376
21.1	Simple Cell Models	311	26.8	Exercises	378
21.2	Nonseparable Receptive Fields	318	27.	Neuronal Networks	381
21.3	Receptive Fields of Complex Cells	320	27.1	Hopfield Networks	382
21.4	Motion-Energy Model	321	27.2	Leaky Integrate-and-Fire Networks	383
21.5	Hubel–Wiesel Model	321	27.3	Leaky Integrate-and-Fire Networks with Plastic Synapses	389
21.6	Multiscale Representation of Visual Information	322	27.4	Hodgkin–Huxley Based Networks	392
21.7	Summary and Sources	323	27.5	Hodgkin–Huxley Based Networks with Plastic Synapses	397
21.8	Exercises	323	27.6	Rate Based Networks	398
22.	Stochastic Estimation Theory	327	27.7	Brain Maps and Self-Organizing Maps	401
22.1	Minimum Mean Square Error Estimation	327	27.8	Summary and Sources	403
22.2	Estimation of Gaussian Signals*	329	27.9	Exercises	404
22.3	Linear Nonlinear (LN) Models*	331	28.	Solutions to Selected Exercises	409
22.4	Summary and Sources	332	28.1	Chapter 2	409
22.5	Exercises	332	28.2	Chapter 3	411
23.	Reverse-Correlation and Spike Train Decoding	335	28.3	Chapter 4	413
23.1	Reverse-Correlation	335	28.4	Chapter 5	414
23.2	Stimulus Reconstruction	338	28.5	Chapter 6	416
23.3	Summary and Sources	340	28.6	Chapter 7	419
23.4	Exercises	340	28.7	Chapter 8	421
24.	Signal Detection Theory	343	28.8	Chapter 9	422
24.1	Testing Hypotheses	343	28.9	Chapter 10	422
24.2	Ideal Decision Rules	346	28.10	Chapter 11	423
24.3	ROC Curves*	348	28.11	Chapter 12	428
24.4	Multidimensional Gaussian Signals*	348	28.12	Chapter 13	430
24.5	Fisher Linear Discriminant*	351	28.13	Chapter 14	431
24.6	Summary and Sources	354	28.14	Chapter 15	433
24.7	Exercises	354	28.15	Chapter 16	436
25.	Relating Neuronal Responses and Psychophysics	355	28.16	Chapter 17	442
25.1	Single Photon Detection	355	28.17	Chapter 18	445
25.2	Signal Detection Theory and Psychophysics	359	28.18	Chapter 19	452
25.3	Motion Detection	361	28.19	Chapter 20	453
25.4	Summary and Sources	363	28.20	Chapter 21	453
25.5	Exercises	364	28.21	Chapter 22	455
26.	Population Codes*	367	28.22	Chapter 23	458
26.1	Cartesian Coordinate Systems	367	28.23	Chapter 24	459
26.2	Overcomplete Representations	369	28.24	Chapter 25	464
26.3	Frames	370	28.25	Chapter 26	466
			28.26	Chapter 27	470
			References	473	
			Index	483
