|--------------------------------------------------------------------------------------------------------------------------------|-----|
| Preface .....                                                                                                                  | v   |
| Contributors .....                                                                                                             | ix  |
| 1 Synthesis and Characterization of Self-Assembled DNA Nanostructures .....                                                    | 1   |
| <i>Chenxiang Lin, Yonggang Ke, Rahul Chhabra, Jaswinder Sharma, Yan Liu, and Hao Yan</i>                                       |     |
| 2 Protocols for Self-Assembly and Imaging of DNA Nanostructures .....                                                          | 13  |
| <i>Thomas L. Sobey and Friedrich C. Simmel</i>                                                                                 |     |
| 3 Self-Assembly of Metal-DNA Triangles and DNA Nanotubes with Synthetic Junctions .....                                        | 33  |
| <i>Hua Yang, Pik Kwan Lo, Christopher K. McLaughlin, Graham D. Hamblin, Faisal A. Aldaye, and Hanadi F. Sleiman</i>            |     |
| 4 DNA-Templated Pd Conductive Metallic Nanowires .....                                                                         | 49  |
| <i>Khoa Nguyen, Stephane Campidelli, and Arianna Filoramo</i>                                                                  |     |
| 5 A Method to Map Spatiotemporal pH Changes Inside Living Cells Using a pH-Triggered DNA Nanoswitch .....                      | 61  |
| <i>Souvik Modi and Yamuna Krishnan</i>                                                                                         |     |
| 6 Control of Helical Handedness in DNA and PNA Nanostructures .....                                                            | 79  |
| <i>Roberto Corradini, Tullia Tedeschi, Stefano Sforza, Mark M. Green, and Rosangela Marchelli</i>                              |     |
| 7 G-Quartet, G-Quadruplex, and G-Wire Regulated by Chemical Stimuli .....                                                      | 93  |
| <i>Daisuke Miyoshi and Naoki Sugimoto</i>                                                                                      |     |
| 8 Preparation and Atomic Force Microscopy of Quadruplex DNA .....                                                              | 105 |
| <i>James Vesenka</i>                                                                                                           |     |
| 9 Synthesis of Long DNA-Based Nanowires .....                                                                                  | 115 |
| <i>Alexander Kotlyar</i>                                                                                                       |     |
| 10 G-Wire Synthesis and Modification with Gold Nanoparticle .....                                                              | 141 |
| <i>Christian Leiterer, Andrea Csaki, and Wolfgang Fritzsche</i>                                                                |     |
| 11 Preparation of DNA Nanostructures with Repetitive Binding Motifs by Rolling Circle Amplification .....                      | 151 |
| <i>Edda Reiß, Ralph Hölzel, and Frank E. Bier</i>                                                                              |     |
| 12 Controlled Confinement of DNA at the Nanoscale: Nanofabrication and Surface Bio-Functionalization .....                     | 169 |
| <i>Matteo Palma, Justin J. Abramson, Alon A. Gorodetsky, Colin Nuckolls, Michael P. Sheets, Shalom J. Wind, and James Hone</i> |     |
| 13 Templated Assembly of DNA Origami Gold Nanoparticle Arrays on Lithographically Patterned Surfaces .....                     | 187 |
| <i>Albert M. Hung and Jennifer N. Cha</i>                                                                                      |     |
| 14 DNA-Modified Single Crystal and Nanoporous Silicon .....                                                                    | 199 |
| <i>Andrew Houlton, Bernard A. Connolly, Andrew R. Pike, and Benjamin R. Horrocks</i>                                           |     |

|    |                                                                                                                                            |     |
|----|--------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 15 | The Atomic Force Microscopy as a Lithographic Tool: Nanografting of DNA Nanostructures for Biosensing Applications . . . . .               | 209 |
|    | <i>Matteo Castronovo and Denis Scaini</i>                                                                                                  |     |
| 16 | Trapping and Immobilization of DNA Molecules Between Nanoelectrodes . . . . .                                                              | 223 |
|    | <i>Anton Kuzyk, J. Jussi Toppari, and Päivi Törmä</i>                                                                                      |     |
| 17 | DNA Contour Length Measurements as a Tool for the Structural Analysis of DNA and Nucleoprotein Complexes . . . . .                         | 235 |
|    | <i>Claudio Rivetti</i>                                                                                                                     |     |
| 18 | DNA Molecular Handles for Single-Molecule Protein-Folding Studies by Optical Tweezers . . . . .                                            | 255 |
|    | <i>Ciro Cecconi, Elizabeth A. Shank, Susan Marqusee, and Carlos Bustamante</i>                                                             |     |
| 19 | Optimal Practices for Surface-Tethered Single Molecule Total Internal Reflection Fluorescence Resonance Energy Transfer Analysis . . . . . | 273 |
|    | <i>Matt V. Fagerburg and Sanford H. Leuba</i>                                                                                              |     |
| 20 | Engineering Mononucleosomes for Single-Pair FRET Experiments . . . . .                                                                     | 291 |
|    | <i>Wiepke J.A. Koopmans, Ruth Buning, and John van Noort</i>                                                                               |     |
| 21 | Measuring DNA-Protein Binding Affinity on a Single Molecule Using Optical Tweezers . . . . .                                               | 305 |
