

Contents

Part 1 Basic techniques of biochemistry and molecular biology	
Chapter 1 Basic techniques of preparation of biomacromolecules	1
Section 1 Salting out	2
Section 2 Dialysis and ultrafiltration	3
Chapter 2 Spectrophotometry	5
Section 1 Basic principles	5
Section 2 The basic construction of spectrophotometers	7
Section 3 Some home-made spectrophotometers	9
Chapter 3 Chromatography	12
Section 1 Adsorption chromatography	12
Section 2 Partition chromatography	12
Section 3 Ion-exchange chromatography	14
Section 4 Gel filtration	17
Section 5 Affinity chromatography	18
Chapter 4 Electrophoretic techniques	20
Section 1 Basic principles	20
Section 2 Several types of commonly used electrophoresis	23
Chapter 5 Centrifugation techniques	29
Section 1 Basic principle	29
Section 2 General description of centrifugation	30
Chapter 6 Genetic engineering and analytical technology of gene expression	34
Section 1 Genetic engineering	34
Section 2 Polymerase chain reaction	40
Section 3 Nucleic acid hybridization	45
Section 4 DNA sequencing technology	46
Part 2 Experiments of the biochemistry and molecular biology	
Chapter 7 Analysis of purification and physicochemical properties of proteins	49
Experiment 1 Colorimetric methods for protein determination	49
Experiment 2 Isolation and purification of serum γ -globulin	51
Experiment 3 Cellulose acetate membrane electrophoresis of serum proteins	53
Experiment 4 Determination of relative molecular mass of protein in SDS-PAGE	55

Chapter 8 Kinetics of enzyme-catalysed reactions	58
Experiment 1 The specificity of enzyme and effect of temperature, pH on the enzyme	
Activity	58
Experiment 2 Isolation of alkaline phosphatase and determination of its specific activity	60
Experiment 3 Effects of substrates concentration on enzymatic activity: determination of K_m of alkaline phosphatase	64
Experiment 4 Inhibition effect of phosphate on alkaline phosphatase	66
Experiment 5 Analysis of lactic dehydrogenase isoenzyme	67
Chapter 9 Substance metabolism	70
Experiment 1 Extraction and identification of liver glycogen	70
Experiment 2 Determination of alanine transaminase activity (Reitman-Frankels' method)	71
Experiment 3 Enzyme catalyzed transamination of amino acids detected by paper chromatography	73
Chapter 10 Basic experiment of molecular biology	76
Experiment 1 Preparation of the genomic DNA in the eukaryotic cells	76
Experiment 2 Determination of the concentration and purity of DNA by spectroscopy	77
Experiment 3 Agarose gel electrophoresis of nucleic acids	77
Experiment 4 Polymerase chain reaction (PCR)	79
Experiment 5 Isolation and purification of the DNA fragments	80
Experiment 6 DNA ligation—constructing recombinant plasmids	82
Experiment 7 Preparation of <i>E. coli</i> competent cells	83
Experiment 8 Transformation of Ca^{2+} competent cells	84
Experiment 9 The screening of recombinant DNA	85
Experiment 10 Minipreparation of plasmid DNA	86
Experiment 11 Digestion of plasmid DNA with restriction endonucleases	89
Experiment 12 Southern blot	90
Experiment 13 Expression of exogenous gene in prokaryotic cells	93
References	95
Appendix	96
Appendix I The calculation table of ammonium sulfate saturation	96
Appendix II Common buffer solution preparation	96
Appendix III The relative molecular mass and pI of protein	100
Appendix IV Common data of chromatography	101
Appendix V The conversion between centrifugation speed of centrifugation force	103
