Preface

Chapter 1 The Photoelectric Detection at the Single Cell Level	1
1.1 Introduction	1
1.2 Dielectrophoresis	1
1.3 Optical Tweezers	6
1.4 Microfluidics	13
1.5 Microelectrodes	23
1.6 Conclusions	27
References	28
Chapter 2 Development of Multiple Transmission-Reflection Infrared Spectroscopy	32
2.1 Introduction of Infrared Absorption Methodologies for Thin Films	32
2.2 Optical Theory	37
2.3 Grazing Angle Mirror-Backed Reflection	44
2.4 Multiple Transmission-Reflection Infrared Spectroscopy	51
2.5 Orientation Analyses with IR Spectroscopy	63
2.6 Summary	72
References	73
Chapter 3 Molecular Interactions at Model Cell Membranes Investigated Using Nonlinear Optical Spectroscopy	77
3.1 Introduction	77
3.2 Sum Frequency Generation Vibrational Spectroscopy	79
3.3 Interactions Between Model Cell Membranes and Small Drug Molecules	80
3.4 Interactions Between Model Cell Membranes and Nanomaterials	84
3.5 Interactions Between Model Cell Membranes and Peptides	87
3.6 Interactions of Membrane Associated Proteins	96
3.7 Conclusions and Outlooks	101
3.8 Acknowledgement	103
References	103
Chapter 4 Microparticle Based Biochips' Preliminary Subsections	107

4.1	Introduction	107
4.2	Plain Microparticles	107
4.3	Encoded Microparticles	112
4.4	Microparticles and Chips	133
4.5	Instrumentation for Microparticles Analysis	143
4.6	Conclusions and Prospective	147
	References	148
Chapter 5 Biomedical Applications of Zwitterionic Antifouling Polymers		
	Based Nanoparticles	157
5.1	Introduction	157
5.2	Biomedical Applications of Zwitterionic Nanoparticles	158
5.3	Conclusions and Outlooks	169
	References	170
Chapter 6 Nucleosome Organization Around Transcriptional Sites and Its		
	Role in Gene Regulation	174
6.1	Introduction	174
6.2	Nucleosome Depletion Upstream of Transcription Start Sites	177
6.3	Nucleosome Occupancy Around Transcriptional Splice Sites	180
6.4	Nucleosome Positioning in the Vicinity of Transcription Termination Sites	183
6.5	Nucleosome Occupancy Patterns Around Transcription Factor Binding Sites	186
6.6	Conclusions	189
	References	189
Chapter 7 Virtual and Augmented Reality in Medical and Biomedical		
	Education	193
7.1	Introduction	193
7.2	Reality-Virtuality Continuum	194
7.3	Virtual and Augmented Reality Applications in Medical and Biomedical Education	194
7.4	Curriculum and User Studies	200
7.5	Challenges	201
7.6	Conclusions	202
7.7	Acknowledgement	202
	References	202

Chapter 8 Relating Information in EEGs to Neurocognitive Processes	205
8.1 The Importance of EEG in Cognitive Neuroscience	205
8.2 Significant Findings in Attention, Language, and Social Cognition	216
8.3 Summary	218
References	218
Chapter 9 Detection, Processing, and Application of Neural Signals	222
9.1 Introduction to the Nervous System	222
9.2 Electrical Properties of Nerves and Propagation of Action Potentials	229
9.3 Detection and Recording of Neural Signals	239
9.4 Neural Signal Processing and Pattern Recognition	257
9.5 Functional Electrical Stimulation of Nerves	262
9.6 Microelectronic Neural Signal Regeneration	269
9.7 Summary	277
Chapter 10 Cerebral Glioma Grading Using Bayesian Network with Features Extracted from Multi-modal MRI	278
10.1 Introduction	278
10.2 Methods	280
10.3 Results	286
10.4 Discussion	289
10.5 Conclusions	291
10.6 Acknowledgement	292
References	292
Chapter 11 Histotripsy: Image-guided, Non-invasive Ultrasound Surgery for Cardiovascular and Cancer Therapy	294
11.1 Introduction	294
11.2 Physics	295
11.3 Image Guidance	300
11.4 Congenital Heart Disease Application	302
11.5 Thrombolysis Application	308
11.6 Liver Cancer Application	314
11.7 Summary and Future Work	318
11.8 Acknowledgement	319
References	320

Color Inset with electric fields. Mounted on a micromanipulator, dielectrophoresis tweezers can position a single cell in three dimensions, holding the cell against fluid
