Preface

Chapter 1	Introduction and Preliminaries	1
1.1	Derivation of the basic chemostat model	1
1.2	Brief review on the modified chemostat models	4
1.3	Preliminaries	7
1.4	Notes	14
Chapter 2	Competition in the Unstirred Chemostat	15
2.1	The model	15
2.2	Simplification	18
2.3	Single population growth and extinction	20
2.4	Coexistence	30
2.5	Notes	33
Chapter 3	Global Bifurcation of the Unstirred Chemostat Model	35
3.1	Introduction	35
3.2	Semitrivial steady-state solutions	37
3.3	Global bifurcation	43
3.4	Stability	50
3.5	Notes	53
Chapter 4	Uniqueness and Stability for the Unstirred Chemostat Model	54
4.1	Preliminaries	55
4.2	Bifurcation from a double eigenvalue	61
4.3	Uniqueness and stability	66
4.4	Notes	81
Chapter 5	Competition between Two Similar Species	82
5.1	Introduction	82
5.2	Stability of semitrivial equilibria	87
5.3	Lyapunov-Schmidt reduction	89
5.4	Stability of coexistence solutions	95
5.5	Dynamical behavior	99
5.6	Discussion	102
Chapter 6	The Unstirred Chemostat Model with Different Diffusion Rates	103
6.1	The model and main results	104
6.2	The global attractor	109

6.3	Equilibria	118
6.4	Uniqueness of single population equilibria	125
6.5	Notes	128
Chapter 7	Crowding Effects on Coexistence Solutions	129
7.1	The model and main results	129
7.2	Single population model	133
7.3	Existence of positive solutions	144
7.4	Bifurcation from a simple eigenvalue	152
7.5	Bifurcation from a double eigenvalue	157
7.6	Crowding effects of species	163
7.7	Discussion	165
Chapter 8	The Unstirred Chemostat Model with Two Substitutable Resources	166
8.1	The model	167
8.2	The special case of $m = n$	169
8.3	Positive solution for general (m, n)	172
8.4	Longtime behavior of the limiting system	180
8.5	Notes	186
Chapter 9	Competition for Two Complementary Resources in the Unstirred Chemostat	187
9.1	Single population model	188
9.2	Two-species model with same diffusion rate	192
9.3	Two-species model with different diffusion rates	203
9.4	Notes	218
Chapter 10	Effects of Inhibitor in the Unstirred Chemostat	220
10.1	The model	221
10.2	Existence of coexistence solutions	224
10.3	The effect of inhibitor	230
10.4	Numerical simulations	264
10.5	Notes	269
	Bibliography	270
