<i>List of Contributors</i>	<i>xi</i>
<i>About the Author</i>	<i>xiii</i>
<i>Foreword</i>	<i>xv</i>
<i>Preface</i>	<i>xvii</i>
1. Amphioxus as a Model for Understanding the Evolution of Vertebrates	1
Yuchao Feng, Jun Li, Anlong Xu	
1.1. Brief introduction of amphioxus	1
1.2. Biology of amphioxus	3
1.3. The story of amphioxus and early research studies in China	10
References	12
2. Basic Knowledge of Immunology	15
Xin Tao, Anlong Xu	
2.1. Immune organs	16
2.2. Immune cells	19
2.3. Innate immunity	22
2.4. Adaptive immunity	32
2.5. Complement system	36
References	40
3. Immune Organs and Cells of Amphioxus	43
Jie Ruan, Anlong Xu	
3.1. Introduction	43
3.2. Organs of the amphioxus immune system	45
3.3. Cells of the amphioxus immune system	48
References	54
4. Genomic and Transcriptomic View of Amphioxus Immunity	57
Shengfeng Huang, Anlong Xu	
4.1. Introduction	58
4.2. Trace evidence of adaptive immunity	59
4.3. Extraordinary gene expansion in amphioxus innate immunity	61
4.4. Regulation of the amphioxus immune system	69
4.5. Discussion	78
References	81

5. Pattern Recognition System in Amphioxus	85
Shaochun Yuan, Jie Ruan, Jian Peng, Anlong Xu	
5.1. TLR signaling pathway in amphioxus	85
5.2. Innate antiviral immunity in amphioxus	102
5.3. NLR signaling pathway	105
References	116
6. Transcription Factors in Amphioxus	121
Shaochun Yuan, Jie Zhang, Tingting Zheng, Ruihua Wang, Anlong Xu	
6.1. NF- κ B family members in amphioxus	121
6.2. The interferon regulatory factor family in amphioxus	125
6.3. The STATs in amphioxus	130
References	137
7. The Complement System of Amphioxus	141
Rui Li, Shengfeng Huang and Anlong Xu	
7.1. Introduction	141
7.2. Tracing the evolutionary origin of the complement system	142
7.3. The complement system of amphioxus	144
References	150
8. The Oxidative Burst System in Amphioxus	153
Ping Yang, Shengfeng Huang, Anlong Xu	
8.1. Introduction	153
8.2. NADPH oxidase 2 and the other NOX families	154
8.3. NOX subunits and regulatory proteins	160
8.4. Functions of ROS generated by NADPH oxidases	162
8.5. Phagocytic respiratory burst (PRB) appears to couple with phagocytosis in the amphioxus gut epithelial lining cells	163
References	163
9. Immune Effectors in Amphioxus	167
Guangrui Huang, Shengfeng Huang and Anlong Xu	
9.1. Galectin	167
9.2. C-type lectin	170
9.3. Peptidoglycan recognition protein	173
9.4. Gram-negative bacteria-binding protein	175
9.5. Chitin-binding protein	175
9.6. Apextrin-like protein	176

9.7. Bactericidal/permeability-increasing protein	182
9.8. Other effector genes	184
References	185
10. Evolution of Inflammation-Related Lipid Metabolism Pathway and Inflammatory Lipid Signaling in Amphioxus	189
Dongjuan Yuan, Anlong Xu	
10.1. Introduction	189
10.2. The classification, structure, and function of fatty acids and eicosanoids	190
10.3. Origin of vertebrate eicosanoid production	191
References	202
11. Apoptosis in Amphioxus	207
Shaochun Yuan, Anlong Xu	
11.1. Apoptosis in mammals	207
11.2. Apoptosis-related gene families in amphioxus	209
References	218
12. Primitive Adaptive Immune System of Amphioxus	221
Yuchao Feng, Shengfeng Huang, Xingsheng Cai, Anlong Xu	
12.1. Evidence of the emergence of adaptive immunity in amphioxus	223
12.2. The primary building blocks for MHC and Rag protein	226
12.3. Alternative forms of variable immune receptors	236
12.4. Closing remark	239
References	239
13. Future Research Directions	245
Xiangru Dong, Rirong Yang, Yuxin Li, Anlong Xu	
13.1. Ubiquitination of immune signaling in amphioxus	245
13.2. The microRNAs in amphioxus	253
13.3. Alternative 3' UTRs in the amphioxus immune response	256
References	260
Abbreviation Index	265
Subject Index	277
