

Contents

Preface to the fourth edition

Section A – Informational macromolecules

A1	Information processing and molecular biology	6
A2	Nucleic acid structure and function	9
A3	Protein structure and function	17
A4	Macromolecular assemblies	27
A5	Analysis of proteins	31

Section B – Properties of nucleic acids

B1	Chemical and physical properties of nucleic acids	40
B2	Spectroscopic and thermal properties of nucleic acids	44
B3	DNA supercoiling	47

Section C – Prokaryotic and eukaryotic chromosome structure

C1	Prokaryotic chromosome structure	56
C2	Chromatin structure	59
C3	Eukaryotic chromosome structure	64
C4	Genome complexity	70

Section D – DNA replication

D1	DNA replication: an overview	77
D2	Bacterial DNA replication	82
D3	Eukaryotic DNA replication	87

Section E – DNA damage, repair, and recombination

E1	DNA damage	94
E2	Mutagenesis	98
E3	DNA repair	102
E4	Recombination and transposition	107

Section F – Transcription in bacteria

F1	Basic principles of transcription	115
F2	<i>Escherichia coli</i> RNA polymerase	118
F3	The <i>E. coli</i> δ^{70} promoter	121
F4	Transcription initiation, elongation, and termination	124

Section G – Regulation of transcription in bacteria

G1	The <i>lac</i> operon	132
G2	The <i>trp</i> operon	136
G3	Transcriptional regulation by alternative δ factors and RNA	141

Section H – Transcription in eukaryotes

H1	The three RNA polymerases: characterization and function	149
H2	RNA Pol I genes: the ribosomal repeat	152
H3	RNA Pol III genes: 5S and tRNA transcription	156
H4	RNA Pol II genes: promoters and enhancers	160
H5	General transcription factors and RNA Pol II initiation	163

Section I – Regulation of transcription in eukaryotes

I1	Eukaryotic transcription factors	170
I2	Examples of transcriptional regulation	177

Section J – RNA processing and RNPs

J1	rRNA processing and ribosomes	187
J2	tRNA and other small RNA processing	193
J3	mRNA processing, hnRNPs, and snRNPs	197
J4	Alternative mRNA processing	204

Section K – The genetic code and tRNA

K1	The genetic code	211
K2	tRNA structure and function	216

Section L – Protein synthesis

L1	Aspects of protein synthesis	227
L2	Mechanism of protein synthesis	231
L3	Initiation in eukaryotes	238
L4	Translational control and post-translational events	243

Section M – Bacteriophages and eukaryotic viruses

M1	Introduction to viruses	252
M2	Bacteriophages	255
M3	DNA viruses	260
M4	RNA viruses	264

Section N – Cell cycle and cancer

N1	The cell cycle	271
N2	Oncogenes	276
N3	Tumor suppressor genes	281
N4	Apoptosis	285

Section O – Gene manipulation

O1	DNA cloning: an overview	292
O2	Preparation of plasmid DNA	297
O3	Restriction enzymes and electrophoresis	301
O4	Ligation, transformation, and analysis of recombinants	306

Section P – Cloning vectors

P1	Design of plasmid vectors	316
P2	Bacteriophages, cosmids, YACs, and BACs	321
P3	Eukaryotic vectors	329

Section Q – Gene libraries and screening

Q1	Genomic libraries	336
Q2	cDNA libraries	339
Q3	Screening procedures	343

Section R – Analysis and uses of cloned DNA

R1	Characterization of clones	350
R2	Nucleic acid sequencing	354
R3	Polymerase chain reaction	360
R4	Analysis of cloned genes	366
R5	Mutagenesis of cloned genes	370

Section S – Functional genomics and the new technologies

S1	Introduction to the 'omics	380
S2	Global gene expression analysis	384
S3	Proteomics	391
S4	Cell and molecular imaging	396
S5	Transgenics and stem cell technology	400
S6	Bioinformatics	404
S7	Systems and synthetic biology	413
