

Brief Contents

1 Introduction to Ecology: Historical Foundations and Developing Frontiers 1

Section I Natural History and Evolution 9

- 2 Life on Land 9
- 3 Life in Water 40
- 4 Population Genetics and Natural Selection 70

Section II Adaptations to the Environment 90

- 5 Temperature Relations 90
- 6 Water Relations 114
- 7 Energy and Nutrient Relations 135
- 8 Social Relations 156

Section III Population Ecology 181

- 9 Population Distribution and Abundance 181
- 10 Population Dynamics 196
- 11 Population Growth 216
- 12 Life Histories 227

Section IV Interactions 248

- 13 Competition 248
- 14 Exploitative Interactions: Predation, Herbivory, Parasitism, and Disease 268
- 15 Mutualism 290

Section V Communities and Ecosystems 307

- 16 Species Abundance and Diversity 307
- 17 Species Interactions and Community Structure 325
- 18 Primary Production and Energy Flow 344
- 19 Nutrient Cycling and Retention 361
- 20 Succession and Stability 381

Section VI Large-Scale Ecology 403

- 21 Landscape Ecology 403
- 22 Geographic Ecology 426
- 23 Global Ecology 444

Appendix Statistical Tables 464

Contents

Preface xii

Chapter 1 Introduction to Ecology: *Historical Foundations and Developing Frontiers* 1

- Overview of Ecology 2
- The Ecology of Forest Birds: Old Tools and New 3
- Forest Canopy Research: A Physical and Scientific Frontier 5
- Climatic and Ecological Change: Past and Future 6
- The Scope of Ecology 8

Section I

NATURAL HISTORY AND EVOLUTION

Chapter 2 Life on Land 9

Terrestrial Biomes 10

Concepts 10

2.1 Large-Scale Patterns of Climatic Variation 11

Temperature, Atmospheric Circulation, and Precipitation 11

Climate Diagrams 11

Concept 2.1 Review 14

2.2 Soil: The Foundation of Terrestrial Biomes 14

Concept 2.2 Review 17

2.3 Natural History and Geography of Biomes 17

Tropical Rain Forest 17

Tropical Dry Forest 18

Tropical Savanna 21

Desert 22

Mediterranean Woodland and Shrubland 25

Temperate Grassland 27

Temperate Forest 29

Boreal Forest 30

Tundra 33

Mountains: Islands in the Sky 35

Concept 2.3 Review 37

Applications: Climatic Variation and the Palmer Drought Severity Index 37

Chapter 3 Life in Water 40

Concepts 41

3.1 The Hydrologic Cycle 41

Concept 3.1 Review 41

3.2 The Natural History of Aquatic Environments 41

The Oceans 41

Life in Shallow Marine Waters: Kelp Forests and Coral Gardens 47

Marine Shores: Life Between High and Low Tides 50

Estuaries, Salt Marshes, and Mangrove Forests 54

Rivers and Streams: Life Blood and Pulse of the Land 58

Lakes: Small Seas 63

Concept 3.2 Review 67

Applications: Biological Integrity—Assessing the Health of Aquatic Systems 67

Number of Species and Species Composition 68

Trophic Composition 68

Fish Abundance and Condition 68

A Test 68

Chapter 4 Population Genetics and Natural Selection 70

Concepts 72

4.1 Variation Within Populations 72

Variation in a Widely Distributed Plant 72

Variation in Alpine Fish Populations 73

Concept 4.1 Review 76

4.2 Hardy-Weinberg 76

Calculating Gene Frequencies 76

Concept 4.2 Review 78

4.3 The Process of Natural Selection 78

Stabilizing Selection 78

Directional Selection 80

Disruptive Selection 80

Concept 4.3 Review 80

4.4 Evolution by Natural Selection 80

Evolution by Natural Selection and Genetic Variation 80

Adaptive Change in Colonizing Lizards 81

Rapid Adaptation by Soapberry Bugs to New Host Plants 83

Concept 4.4 Review 84

4.5 Change Due to Chance 84

Evidence of Genetic Drift in Chihuahua Spruce 84

Genetic Variation in Island Populations 85

Genetic Diversity and Butterfly Extinctions 86

Concept 4.5 Review 87

Applications: Evolution and Agriculture 87

Evolution of Herbicide Resistance in Weeds 87

Section II

ADAPTATIONS TO THE ENVIRONMENT

Chapter 5 Temperature Relations 90

Concepts 91

5.1 Microclimates 91

- Altitude 91
- Aspect 91
- Vegetation 92
- Color of the Ground 92
- Presence of Boulders and Burrows 93
- Aquatic Temperatures 93
- Concept 5.1 Review* 94

5.2 Temperature and Performance of Organisms 94

- The Principle of Allocation 94
- Temperature and Animal Performance 95
- Extreme Temperatures and Photosynthesis 96
- Temperature and Microbial Activity 97
- Concept 5.2 Review* 99

5.3 Regulating Body Temperature 99

- Balancing Heat Gain Against Heat Loss 99
- Temperature Regulation by Plants 100
- Temperature Regulation by Ectothermic Animals 102
- Temperature Regulation by Endothermic Animals 104
- Temperature Regulation by Thermogenic Plants 108
- Concept 5.3 Review* 108

5.4 Surviving Extreme Temperatures 109

- Inactivity 109
- Reducing Metabolic Rate 109
- Hibernation by a Tropical Species 110
- Concept 5.4 Review* 111

**Applications: Climatic Warming and the Local
Extinction of a Land Snail** 111

Chapter 6 Water Relations 114

Concepts 115

6.1 Water Availability 116

- Water Content of Air 116
- Water Movement in Aquatic Environments 117
- Water Movement Between Soils and Plants 118
- Concept 6.1 Review* 120

6.2 Water Regulation on Land 120

- Water Acquisition by Animals 120
- Water Acquisition by Plants 122
- Water Conservation by Plants and
Animals 124

**Investigating the Evidence 1: Sample
Size** 125

**Dissimilar Organisms with Similar Approaches
to Desert Life** 127

**Two Arthropods with Opposite Approaches to
Desert Life** 128

Concept 6.2 Review 130

6.3 Water and Salt Balance in Aquatic Environments 130

- Marine Fish and Invertebrates 132
- Freshwater Fish and Invertebrates 132
- Concept 6.3 Review* 134

Chapter 7 Energy and Nutrient Relations 135

Concepts 137

7.1 Photosynthetic Autotrophs 137

- The Solar-Powered Biosphere 137
- Concept 7.1 Review* 141

7.2 Chemosynthetic Autotrophs 141

- Concept 7.2 Review* 141

7.3 Heterotrophs 141

- Chemical Composition and Nutrient
Requirements 142
- Concept 7.3 Review* 148

7.4 Energy Limitation 148

- Photon Flux and Photosynthetic Response
Curves 148
- Food Density and Animal Functional
Response 149
- Concept 7.4 Review* 151

7.5 Optimal Foraging Theory 151

- Testing Optimal Foraging Theory 151
- Optimal Foraging by Plants 153
- Concept 7.5 Review* 154

**Applications: Bioremediation—Using the Trophic
Diversity of Bacteria to Solve Environmental
Problems** 154

Leaking Underground Storage Tanks 154

Cyanide and Nitrates in Mine Spoils 155

Chapter 8 Social Relations 156

Concepts 158

8.1 Mate Choice 158

- Mate Choice and Sexual Selection in Guppies 159
- Mate Choice Among Scorpionflies 163
- Nonrandom Mating Among Wild Radish 166
- Concept 8.1 Review* 168

8.2 Sociality 168

- Cooperative Breeders 168

**Investigating the Evidence 2: Estimating
Heritability Using Regression Analysis** 172

Concept 8.2 Review 175

8.3 Eusociality 175

Eusocial Species 175

Evolution of Eusociality 177

Concept 8.3 Review 179

Applications: Behavioral Ecology and Conservation 179

Tinbergen's Framework 179

Environmental Enrichment and Development of Behavior 179

Section III POPULATION ECOLOGY

Chapter 9 Population Distribution and Abundance 181

Concepts 183

9.1 Distribution Limits 183

Distributions of Plants Along a Moisture-Temperature Gradient 183

Distributions of Barnacles Along an Intertidal Exposure Gradient 184

Concept 9.1 Review 186

9.2 Patterns on Small Scales 186

Scale, Distributions, and Mechanisms 186

Distributions of Desert Shrubs 187

Concept 9.2 Review 188

9.3 Patterns on Large Scales 188

Bird Populations Across North America 189

Plant Distributions Along Moisture Gradients 190

Concept 9.3 Review 191

9.4 Organism Size and Population Density 191

Animal Size and Population Density 191

Plant Size and Population Density 192

Concept 9.4 Review 193

Applications: Rarity and Vulnerability to Extinction 193

Seven Forms of Rarity and One of Abundance 193

Chapter 10 Population Dynamics 196

Concepts 197

10.1 Dispersal 197

Dispersal of Expanding Populations 198

Range Changes in Response to Climate Change 199

Dispersal in Response to Changing Food Supply 199

Dispersal in Rivers and Streams 201

Concept 10.1 Review 202

10.2 Metapopulations 202

A Metapopulation of an Alpine Butterfly 202

Dispersal Within a Metapopulation of Lesser Kestrels 203

Concept 10.2 Review 204

10.3 Patterns of Survival 204

Estimating Patterns of Survival 204

High Survival Among the Young 205

Constant Rates of Survival 207

High Mortality Among the Young 207

Three Types of Survivorship Curves 208

Concept 10.3 Review 208

10.4 Age Distribution 208

Contrasting Tree Populations 208

A Dynamic Population in a Variable Climate 209

Concept 10.4 Review 210

10.5 Rates of Population Change 210

Estimating Rates for an Annual Plant 210

Estimating Rates When Generations Overlap 212

Concept 10.5 Review 213

Applications: Using Population Dynamics to Assess the Impact of Pollutants 214

Chapter 11 Population Growth 216

Concepts 217

11.1 Geometric and Exponential Population Growth 217

Geometric Growth 217

Exponential Growth 218

Exponential Growth in Nature 219

Concept 11.1 Review 220

11.2 Logistic Population Growth 221

Concept 11.2 Review 223

Applications: The Human Population 223

Distribution and Abundance 223

Population Dynamics 224

Population Growth 225

Chapter 12 Life Histories 227

Concepts 228

12.1 Offspring Number Versus Size 228

Egg Size and Number in Fish 229

Seed Size and Number in Plants 230

Seed Size and Seedling Performance 232

Concept 12.1 Review 234

12.2 Adult Survival and Reproductive Allocation 235

Life History Variation Among Species 235

Life History Variation Within Species 236

Concept 12.2 Review 239

12.3 Life History Classification 239

r and K Selection 239

Plant Life Histories 240

Opportunistic, Equilibrium, and Periodic Life Histories 241

Reproductive Effort, Offspring Size, and Benefit-Cost Ratios 242

Concept 12.3 Review 244

Applications: Using Life History Information
to Restore Riparian Forests 245

Section IV INTERACTIONS

Chapter 13 Competition 248

Concepts 250

13.1 Intraspecific Competition 250

- Intraspecific Competition Among Plants 250
- Intraspecific Competition Among Planthoppers 251
- Interference Competition Among Terrestrial Isopods 252
- Concept 13.1 Review* 252

13.2 Competitive Exclusion and Niches 252

- The Feeding Niches of Galápagos Finches 253
- The Habitat Niche of a Salt Marsh Grass 253
- Concept 13.2 Review* 255

13.3 Mathematical and Laboratory Models 255

- Modeling Interspecific Competition 255
- Laboratory Models of Competition 257
- Concept 13.3 Review* 258

13.4 Competition and Niches 258

- Niches and Competition Among Plants 259
- Niche Overlap and Competition Between Barnacles 259
- Competition and the Habitat of a Salt Marsh Grass 260
- Competition and the Niches of Small Rodents 261
- Character Displacement 262
- Investigating the Evidence 3: Field Experiments 265
- Concept 13.4 Review* 266

Applications: Competition Between Native
and Invasive Species 266

Chapter 14 Exploitative Interactions: Predation, Herbivory, Parasitism, and Disease 268

Concepts 269

14.1 Complex Interactions 269

- Parasites and Pathogens That Manipulate Host Behavior 269
- The Entangling of Exploitation with Competition 271
- Concept 14.1 Review* 273

14.2 Exploitation and Abundance 273

- A Herbivorous Stream Insect and Its Algal Food 273
- A Pathogenic Parasite, a Predator, and Its Prey 274
- Concept 14.2 Review* 277

14.3 Dynamics 277

- Cycles of Abundance in Snowshoe Hares and Their Predators 277
- Experimental Test of Food and Predation Impacts 279
- Population Cycles in Mathematical and Laboratory Models 279

Concept 14.3 Review 281

14.4 Refuges 281

- Refuges and Host Persistence in Laboratory and Mathematical Models 281
- Exploited Organisms and Their Wide Variety of "Refuges" 283
- Concept 14.4 Review* 286

Applications: Using Predators to Control
a Parasite 287

Chapter 15 Mutualism 290

Concepts 291

15.1 Plant Mutualisms 291

- Plant Performance and Mycorrhizal Fungi 292
- Ants and Swollen Thorn Acacias 295
- A Temperate Plant Protection Mutualism 299
- Concept 15.1 Review* 301

15.2 Evolution of Mutualism 301

- Facultative Ant-Plant Protection Mutualisms 303
- Concept 15.2 Review* 303

Applications: Mutualism and Humans 303

- Guiding Behavior 304

Section V COMMUNITIES AND ECOSYSTEMS

Chapter 16 Species Abundance and Diversity 307

Concepts 308

16.1 Species Abundance 309

- The Lognormal Distribution 309
- Concept 16.1 Review* 310

16.2 Species Diversity 310

- A Quantitative Index of Species Diversity 310
- Rank-Abundance Curves 311
- Concept 16.2 Review* 312

Investigating the Evidence 4: Estimating
the Number of Species in Communities 313

16.3 Environmental Complexity 314

- Forest Complexity and Bird Species Diversity 314
- Niches, Heterogeneity, and the Diversity of Algae and Plants 315
- The Niches of Algae and Terrestrial Plants 315
- Complexity in Plant Environments 316
- Soil and Topographic Heterogeneity and the Diversity of Tropical Forest Trees 316
- Algal and Plant Species Diversity and Increased Nutrient Availability 318
- Nitrogen Enrichment and Ectomycorrhizal Fungus Diversity 318
- Concept 16.3 Review* 319

16.4 Disturbance and Diversity 319

- The Nature of Equilibrium 319
- The Nature and Sources of Disturbance 319
- The Intermediate Disturbance Hypothesis 319
- Disturbance and Diversity in the Intertidal Zone 320
- Disturbance and Diversity in Temperate Grasslands 321
- Concept 16.4 Review* 322

- Applications: Disturbance by Humans** 322
- Disturbance by Humans and the Diversity of Chalk Grasslands 323

Chapter 17 Species Interactions and Community Structure 325

Concepts 327

- 17.1 Community Webs 327**
 - Detailed Food Webs Reveal Great Complexity 327
 - Strong Interactions and Food Web Structure 327
 - Concept 17.1 Review* 329

17.2 Indirect Interactions 329

- Indirect Commensalism 329
- Apparent Competition 330
- Concept 17.2 Review* 330

17.3 Keystone Species 330

- Food Web Structure and Species Diversity 330
- Experimental Removal of Sea Stars 332
- Snail Effects on Algal Diversity 334
- Fish as Keystone Species in River Food Webs 336
- Concept 17.3 Review* 339

17.4 Mutualistic Keystones 339

- A Cleaner Fish as a Keystone Species 339
- Seed Dispersal Mutualists as Keystone Species 339
- Concept 17.4 Review* 340

Applications: Human Modification of Food Webs 340

- The Empty Forest: Hunters and Tropical Rain Forest Animal Communities 340
- Ants and Agriculture: Keystone Predators for Pest Control 341

Chapter 18 Primary Production and Energy Flow 344

Concepts 346

- 18.1 Patterns of Terrestrial Primary Production 346**
 - Actual Evapotranspiration and Terrestrial Primary Production 346
 - Soil Fertility and Terrestrial Primary Production 347
 - Concept 18.1 Review* 348

18.2 Patterns of Aquatic Primary Production 348

- Patterns and Models 348
- Whole Lake Experiments on Primary Production 349
- Global Patterns of Marine Primary Production 349
- Concept 18.2 Review* 351

18.3 Consumer Influences 351

- Piscivores, Planktivores, and Lake Primary Production 351
- Grazing by Large Mammals and Primary Production on the Serengeti 353
- Concept 18.3 Review* 353

18.4 Trophic Levels 355

- A Trophic Dynamic View of Ecosystems 355
- Energy Flow in a Temperate Deciduous Forest 356
- Concept 18.4 Review* 357

Applications: Using Stable Isotope Analysis to Trace Energy Flow Through Ecosystems 357

- Trophic Levels of Tropical River Fish 358
- Using Stable Isotopes to Identify Sources of Energy in a Salt Marsh 358
- Food Habits of Prehistoric Human Populations 359

Chapter 19 Nutrient Cycling and Retention 361

Concepts 362

19.1 Nutrient Cycles 362

- The Phosphorus Cycle 363
- The Nitrogen Cycle 364
- The Carbon Cycle 365
- Concept 19.1 Review* 366

19.2 Rates of Decomposition 366

- Decomposition in Two Mediterranean Woodland Ecosystems 366
- Decomposition in Two Temperate Forest Ecosystems 367
- Decomposition in Aquatic Ecosystems 369
- Concept 19.2 Review* 370

19.3 Organisms and Nutrients 370

- Nutrient Cycling in Streams 371
- Animals and Nutrient Cycling in Terrestrial Ecosystems 372
- Plants and the Nutrient Dynamics of Ecosystems 373
- Concept 19.3 Review* 375

19.4 Disturbance and Nutrients 375

- Disturbance and Nutrient Loss from the Hubbard Brook Experimental Forest 375
- Flooding and Nutrient Export by Streams 376
- Concept 19.4 Review* 378

Applications: Altering Aquatic and Terrestrial Ecosystems 378

Chapter 20 Succession and Stability 381

Concepts 383

- 20.1 Community Changes During Succession 383**
 - Primary Succession at Glacier Bay 383

Secondary Succession in Temperate

Forests 384

Succession in Rocky Intertidal Communities 385

Succession in Stream Communities 385

Concept 20.1 Review 387**20.2 Ecosystem Changes During Succession 387**

Ecosystem Changes at Glacier Bay 387

Four Million Years of Ecosystem Change 387

Recovery of Nutrient Retention Following
Disturbance 389

Succession and Stream Ecosystem Properties 391

Concept 20.2 Review 392**20.3 Mechanisms of Succession 392**Successional Mechanisms in the Rocky
Intertidal Zone 394

Successional Mechanisms in Forests 395

Concept 20.3 Review 396**20.4 Community and Ecosystem Stability 396**

Some Definitions 396

Lessons from the Park Grass Experiment 397

Replicate Disturbances and Desert Stream Stability 398

Concept 20.4 Review 400**Applications: Using Repeat Photography to Detect
Long-Term Change 400**

Section VI LARGE-SCALE ECOLOGY

Chapter 21 Landscape Ecology 403**Concepts 405****21.1 Landscape Structure 405**

The Structure of Six Landscapes in Ohio 405

The Fractal Geometry of Landscapes 407

Concept 21.1 Review 408**21.2 Landscape Processes 408**

Landscape Structure and the Dispersal of Mammals 409

Habitat Patch Size and Isolation and the Density
of Butterfly Populations 410

Habitat Corridors and Movement of Organisms 411

Landscape Position and Lake Chemistry 412

**Investigating the Evidence 5: Comparison of Two
Samples Using a Rank Sum Test 413***Concept 21.2 Review* 414**21.3 Origins of Landscape Structure and Change 414**Geological Processes, Climate, and Landscape
Structure 414

Organisms and Landscape Structure 417

Fire and the Structure of a Mediterranean
Landscape 421*Concept 21.3 Review* 421**Applications: Restoring a Riverine Landscape 422**

Riverine Restoration: The Kissimmee River 423

Chapter 22 Geographic Ecology 426**Concepts 428****22.1 Area, Isolation, and Species Richness 428**

Sampling Area and Number of Species 428

Island Area and Species Richness 428

Island Isolation and Species Richness 430

Concept 22.1 Review 431**22.2 The Equilibrium Model of Island
Biogeography 431**

Species Turnover on Islands 432

Experimental Island Biogeography 433

Colonization of New Islands by Plants 434

Manipulating Island Area 435

Island Biogeography Update 436

Concept 22.2 Review 436**22.3 Latitudinal Gradients in Species Richness 436**

Area and Latitudinal Gradients in Species Richness 438

Continental Area and Species Richness 439

Concept 22.3 Review 440**22.4 Historical and Regional Influences 440**

Exceptional Patterns of Diversity 440

**Investigating the Evidence 6: Sample Size
Revisited 441**

Historical and Regional Explanations 441

Concept 22.4 Review 443**Chapter 23 Global Ecology 444**The Atmospheric Envelope and the
Greenhouse Earth 445**Concepts 446****23.1 A Global System 446**

The Historical Thread 447

El Niño and La Niña 448

El Niño and Marine Populations 449

El Niño and the Great Salt Lake 451

El Niño and Terrestrial Populations in Australia 452

Concept 23.1 Review 453**23.2 Human Activity and the Global
Nitrogen Cycle 453***Concept 23.2 Review* 454**23.3 Changes in Land Cover 454**

Tropical Deforestation 454

Concept 23.3 Review 458**23.4 Human Influence on Atmospheric
Composition 458**

Depletion and Recovery of the Ozone Layer 460

The Future 461

Concept 23.4 Review 462**Applications: Cooperative Research Networks
for Global Ecology 462****Appendix Statistical Tables 464****Glossary 468****Credits 478**
