

Contents

Introduction	1
Chapter 1 Overview of Cell	7
1.1 Structural Organization of Prokaryotic Cells	7
1.2 Structural Organization of Eukaryotic Cells	8
Membrane	8
Cytoskeleton	9
The Nucleus	10
The Endoplasmic Reticulum and Golgi Apparatus	10
Mitochondria	12
Lysosomes and Peroxisomes	13
Key Words	13
Chapter 2 Protein	14
2.1 Amino Acids	14
General Structures of Amino Acids	14
Structures of the 20 Common Amino Acids	15
Spectroscopic Properties of Amino Acids	19
The Ninhydrin Reaction	20
Ionization of Amino Acids	20
2.2 Structures of Proteins	22
Peptide	22
Peptide Bonds	23
Primary Structure	24
Secondary Structure	25
Supersecondary Structure	28
Tertiary Structure	29
Quaternary Structure	29
The Classification of Proteins	30
2.3 Structure-function Relationships of Proteins	30
Primary Structure Determine the Conformation of Protein	30
Protein Denaturation and Renaturation	32
Protein Stability	32
Correlation between Conformation and Function of Protein	34
Protein Misfolding and Diseases	38
2.4 Protein Purification Techniques	39

Salting Out	39
Dialysis	40
Gel Filtration Chromatography	40
Ion Exchange Chromatography	41
Affinity Chromatography	42
Electrophoresis	42
SDS Polyacrylamide Gel Electrophoresis (SDS-PAGE)	43
Isoelectric Focusing	43
Two Dimensional Electrophoresis	44
Ultracentrifugation	44
Key Words	45
Chapter 3 Enzymes	46
3.1 The History of Enzymes	46
3.2 Naming and Classification of Enzymes	47
EC 1 Oxidoreductases	47
EC 2 Transferases	48
EC 3 Hydrolases	48
EC 4 Lyases	48
EC 5 Isomerases	48
EC 6 Ligases	48
3.3 Structural Components of Enzymes	49
Apoenzymes, Cofactors and Holoenzymes	49
Active Center of Enzymes	50
Isozymes	50
3.4 The Properties of Enzymatic Catalysis	50
Enzymes Greatly Accelerate the Rates of Chemical Reactions	51
Specificity of Enzymes	51
Controllability of Enzyme Activity	52
3.5 Mechanism of Enzymatic Catalysis	52
Transition State and Activation Energy	52
Lock and Key Hypothesis	54
Induced Fit Hypothesis	54
Enzyme-Substrate Interactions	55
3.6 Enzyme Kinetics	56
Substrate Concentration Affects the Rate of Reactions	56
Michaelis-Menton Kinetics	57
The Significance of K_m	58
Measurement of K_m and V_{max}	59
Enzyme Concentration Affects the Rate of Reactions	60
Temperature Affects the Rate of Reactions	60
pH Value Affects the Rate of Reactions	61
Inhibition of Enzyme Catalyzed Reactions	62

3.7	Enzyme Inhibitors and Drugs	65
3.8	Regulation of Enzyme Activity	66
	Allosteric Regulation	67
	Covalent Modification	67
	Zymogen Activation	68
3.9	Enzymes in the Diagnosis of Pathology	68
	Key Words	70
Chapter 4 Coenzymes and Vitamins		71
4.1	Water-soluble Vitamins	72
	Vitamin B ₁	72
	Vitamin PP	73
	Vitamin B ₂	74
	Pantothenic Acid	75
	Vitamin B ₆	76
	Vitamin B ₁₂	77
	Vitamin C	78
	Biotin	78
	Lipoic Acid	79
	Folate	79
4.2	Fat-soluble Vitamins	80
	Vitamin A	80
	Vitamin D	81
	Vitamin E	82
	Vitamin K	82
	Key Words	83
Chapter 5 Nucleic Acids		84
5.1	Building Blocks of Nucleic Acids	84
	Ribose and Deoxyribose	84
	Nitrogenous Bases	85
	Nucleosides	85
	Nucleotides	86
5.2	Nucleic Acid Structure	88
	3'-5' Phosphodiester Bonds	88
	The Primary Structure of Nucleic Acids	89
	DNA Double Helix	89
	DNA Organization in Cells	92
	Structure of RNA	93
	Ribozymes	99
5.3	Physicochemical Property of Nucleic Acids	99
	Spectroscopic Properties of Nucleic Acids	99
	Denaturation and Renaturation of DNA	100

Nucleic Acid Hybridization	101
Key Words	102
Chapter 6 DNA Replication	103
6.1 Fundamental Rules in DNA Replication	103
Semiconservative	103
Bidirectional Replication of DNA	104
Semidiscontinuous and Okazaki Fragments	105
6.2 The Key Enzymes and Protein Factors in DNA Replication of <i>E. coli</i>	105
DNA Polymerase	105
Model of the Replisome	107
6.3 DNA Replication in the <i>E. coli</i>	108
Initiation	109
Elongation	109
Termination	110
6.4 DNA Replication in Eukaryote	111
Eukaryotic Cell Cycle	111
Multiple Replicons	111
Eukaryotic DNA Polymerases	112
Other Enzymes and Proteins in DNA Replication of Eukaryote	113
Replication of the Ends of Chromosomes	113
6.5 Repair of Damaged DNA	114
Nucleotide Excision Repair	115
Transcription-coupled Repair	116
Base Excision Repair	116
Mismatch Repair	117
Direct Repair	117
SOS Response Repair	118
Key Words	118
Chapter 7 RNA Synthesis—Transcription	120
7.1 DNA-dependent Synthesis of RNA	120
DNA-dependent RNA Polymerase	121
Promoter Sites on the DNA Template	122
7.2 Transcription in Prokaryote	123
Initiation	123
Elongation	124
Termination	125
7.3 Transcription in Eukaryotes	126
Eukaryotic RNA Polymerases	126
Eukaryotic Transcription Factors	127
7.4 RNA Processing	129
Eukaryotic mRNA Processing	129

The Splicing of mRNA Precursors	131
Processing of pre-rRNA and pre-tRNA	132
RNA Editing	133
Key Words	134
Chapter 8 Protein Synthesis—Translation	135
8.1 The Genetic Code	135
The Genetic Code Is a Triplet Code	136
The Genetic Code Is Nonoverlapping and without Punctuation	137
The Genetic Code Is Degenerate, but Unambiguous	137
The Code Is Almost Universal	139
8.2 Formation of Aminoacyl-tRNA	139
8.3 Translation in Prokaryotes	140
Initiation of Translation	140
Elongation	143
Termination and Release	144
Polyribosomes	146
8.4 Translation in Eukaryotes	148
8.5 Events Following Protein Translation	149
Processing of Proteins	149
Posttranslational Modifications	150
8.6 Protein Targeting	150
Signal Hypothesis	151
Lysosomal Proteins	152
Mitochondrial Proteins	153
Nuclear Proteins	155
Proteins of the Endoplasmic Reticulum	155
Integral Plasma Membrane Proteins	155
8.7 Inhibitors of Protein Synthesis	156
Key Words	157
Chapter 9 Regulation of Gene Expression	158
9.1 Principles of Gene Regulation	158
Specificity of Gene Expression	158
Types of Gene Expression	159
The Specific DNA Sequences	159
Regulatory Proteins	160
9.2 Regulation of Gene Expression in Prokaryotes	162
Operons	162
Lactose (<i>lac</i>) Operon	162
Negative Regulation of Gene Transcription	163
Positive Regulation of Gene Transcription	164
Tryptophan (<i>trp</i>) Operon	165

Attenuation of Transcription	166
9.3 Regulation of Gene Expression in Eukaryotes	167
Modification of DNA	168
Gene Regulatory Sequences	168
Gene Specific Regulatory Proteins	169
Key Words	170
Chapter 10 Carbohydrate Metabolism	171
10.1 Glycolysis	171
The Reactions of Glycolysis	172
The Fate of Pyruvate	177
Regulation of Glycolysis	178
10.2 The Citric Acid Cycle	180
The Formation of Acetyl Coenzyme A from Pyruvate	180
The Reactions of the Citric Acid Cycle	181
Energy Yield of the Citric Acid Cycle	184
The Regulation of Citric Acid Cycle	186
Major Metabolic Pathways Converging on the Citric Acid Cycle	187
10.3 The Pentose Phosphate Pathway	188
The Reaction of the Pentose Phosphate Pathway	188
The Regulation of the Pentose Phosphate Pathway	190
Metabolic Disorders Associated with the Pathway	190
10.4 Glycogen Metabolism	191
Glycogen Synthesis	191
Glycogen Degradation	193
Regulation of Glycogen Metabolism	193
10.5 Gluconeogenesis	195
Gluconeogenic Pathway	195
The Cori Cycle	196
10.6 Regulation of Blood Glucose Level	198
Key Words	198
Chapter 11 Electron Transport and Oxidative Phosphorylation	200
11.1 Electron Transport Chains	200
Complex I : NADH to Coenzyme Q	202
Complex II : Succinate to Coenzyme Q	203
Complex III : Coenzyme Q to Cytochrome c	203
Complex IV : Cytochrome c to O ₂	203
11.2 Coupling with Oxidative Phosphorylation	204
Chemiosmotic Coupling	204
P/O Ratio	205
ATP Synthase or the F ₀ F ₁ Complex	205
11.3 Aerobic Oxidation of Cytosolic NADH	207

Glycerol -3-phosphate Shuttle	207
Malate-Aspartate Shuttle	207
11.4 Effect Factors of Oxidative Phosphorylation	208
Inhibitors of Electron Transport	208
Uncouplers	209
11.5 Mutations in Mitochondrial DNA (mtDNA)	210
Key Words	210
Chapter 12 Lipid Metabolism	211
12.1 The Digestion and Absorption of Lipids	211
12.2 Oxidation of Fatty Acids	212
Mobilization of Fatty Acids	212
Activation and Transport of Fatty Acids	214
The Reaction of β -Oxidation	214
Energy Yield of Fatty Acid Oxidation	216
Alternative Oxidation Pathways	216
12.3 Synthesis and Oxidation of Ketone Bodies	218
Synthesis of Ketone Bodies	218
Oxidation of Ketone Bodies as Fuels	218
12.4 Fatty Acid Synthesis	219
Transport of Acetyl CoA to the Cytosol	220
Carboxylation of Acetyl CoA	220
The Reactions of Fatty Acid Synthesis	221
Elongation and Desaturation	222
Regulation of Fatty Acid Metabolism	224
12.5 Triglyceride Synthesis	224
12.6 Metabolism of Glycerophospholipids and Sphingolipids	225
Synthesis of Glycerophospholipids	227
Synthesis of Sphingolipids	229
Degradation of Glycerophospholipids and Sphingolipids	232
12.7 Cholesterol Metabolism	232
Biosynthesis of Cholesterol	233
Regulation of Cholesterol Biosynthesis	235
The Transform of Cholesterol	236
12.8 Lipoprotein Metabolism	236
Chylomicrons	238
VLDLs, IDLs and LDLs	238
HDLs	239
Key Words	239
Chapter 13 Amino Acid Metabolism	241
13.1 General Metabolism of Amino Acids	241
Transamination Reactions	241

Oxidative Deamination of Glutamate	242
Purine Nucleotide Cycle	243
Transportation of Amino Acid Nitrogen to the Liver	244
The Urea Cycle	245
Links between the Citric Acid and Urea Cycles	248
Regulation of the Urea Cycle	248
Metabolism of Carbon Skeletons of Amino Acids	249
13.2 Individual Metabolism of Some Amino Acids	250
Decarboxylation of Amino Acids	251
One Carbon Unit	252
S-Adenosyl Methionine	254
Synthesis of the Catecholamines	255
Key Words	255
Chapter 14 Nucleotides Metabolism	256
14.1 Nucleotide Synthesis	256
The <i>de novo</i> Pathway of Purine Synthesis	259
Synthesis of AMP and GMP	259
Phosphorylation of AMP and GMP	260
Regulation of Purine Synthesis	260
Purine Salvage Pathways	262
Purine Nucleotides Transformation	262
The <i>de novo</i> Pathway of Pyrimidine Synthesis	264
Regulation of <i>de novo</i> Pyrimidine Synthesis	264
The Salvage Pathway of Pyrimidine Synthesis	264
The Production of Deoxyribonucleotides	265
14.2 Degradation of Nucleotides	266
Degradation of Purine Nucleotides	267
Degradation of Pyrimidine Nucleotides	267
Key Words	269
Chapter 15 Cell Signaling	269
15.1 Signaling Molecules	269
Types of Signaling Molecules	270
15.2 Signaling Receptor	270
Properties of Binding between Receptors and Ligands	271
Cell Surface Receptors	276
Intracellular Receptors	277
15.3 Principles of Intracellular Signal Transduction	277
Second Messengers	280
Protein Kinases and Phosphatases	280
Protein Interaction Domains	281
Adaptor Protein	281

Scaffolding Proteins	282
15.4 Several Classic Examples of Signal Transductions	282
MAPK/ERK Pathway	282
JAK-STAT Pathway	284
TGF- β Signaling Pathway	285
Insulin Signaling Pathways	286
Glucagon and Epinephrine Signaling Pathways	287
Key Words	289
Chapter 16 The Popular Techniques in Molecular Biology	290
16.1 Molecular Hybridization and Blotting Technique	290
The Principle of Molecular Hybridization and Blotting Technique	290
The Types and Applications of Blotting Technique	291
16.2 The Principle and Application of Polymerase Chain Reaction (PCR)	294
The Principle of PCR	294
The Application of PCR	295
16.3 Nucleic Acid Sequencing	296
RNA Sequencing	296
DNA Sequencing	296
The Application of DNA Sequencing	299
16.4 Gene Library	299
Genomic DNA Library	299
cDNA Library	300
The Application of cDNA Library	301
cDNA Library vs. Genomic DNA Library	301
16.5 Biological Chip Techniques	301
Gene Chip	302
Protein Chip	303
16.6 The Method of Protein-Protein and Protein-DNA Interaction Study	304
Protein-Protein Interaction Technology	304
DNA-Protein Interaction Molecular Analysis Technology	305
16.7 The Establishment and Application of Heredity-Modified Animal Model	305
Transgenic Technology	306
Nuclear Transfer Technology	306
Gene Targeting	307
Gene Knockout	307
Gene Knockin	308
Gene Knockdown	309
16.8 Cloning and Identification of Disease Relative Genes	309
Functional Cloning	309
Positional Cloning	310

16.9 Gene Therapy	310
Approach of Gene Therapy	311
Types of Gene Therapy	311
Vectors in Gene Therapy	311
Key Words	313
Reference	315
Index	318
