

CONTENTS

Chapter 1	Historical Review of Molecular Biology	1
1.1	Definition of Molecular Biology	1
1.2	Brief History of Molecular Biology	2
1.3	Basic Content of Molecular Biology	4
1.4	Role of Molecular Biology in Medical Science	5
Chapter 2	Transmission of Genetic Information	8
2.1	DNA Replication	9
2.2	Transcription	13
2.3	Translation	18
Chapter 3	Gene Regulation	25
3.1	Gene Regulation in Prokaryotes	26
3.2	Gene Regulation in Eukaryotes	28
3.3	Non-coding RNA and RNA Interference	30
3.4	Epigenetic Regulation of Gene Expression	33
3.5	Gene Regulatory Network	35
Chapter 4	DNA Damage and Repair	38
4.1	Factors Causing DNA Damage	39
4.2	Types of DNA Damage	39
4.3	DNA Repair Mechanisms	41
4.4	DNA Damage Caused Effects	45
Chapter 5	Protein Modification, Trafficking and Degradation	48
5.1	Folding of Nascent Polypeptide Chains	49
5.2	Assembly of Protein Subunits	50
5.3	Post-translational Modifications of Proteins	51
5.4	Transport and Localization of Proteins	55
5.5	Degradation of Cellular Proteins	58
5.6	Clinical Significance of Protein Modification, Trafficking and Degradation	59
Chapter 6	Molecular Cloning and Genetic Engineering	62
6.1	Cloning Enzymes	63
6.2	Cloning Vectors	66
6.3	Principle and Procedures of Molecular Cloning	68
6.4	Genetic Engineering	72
Chapter 7	Gene Characterization and Functional Analysis	77
7.1	Nucleic Acid Molecular Hybridization	78
7.2	Polymerase Chain Reaction	82
7.3	Nucleic Acid Sequencing	87
Chapter 8	Omics and System Biology	95
8.1	Genomics	96

8.2	Transcriptomics	98
8.3	Proteomics	99
8.4	Metabolomics	101
Chapter 9	Gene Transfer and Gene Targeting	104
9.1	Gene Recombination	105
9.2	Gene Transfer and Transgenic	106
9.3	Gene Targeting by Homologous Recombination	112
9.4	Transgenic and Its Application	114
Chapter 10	Molecular Biology of Cancer	117
10.1	Cell Cycle and Apoptosis	118
10.2	Oncogenes and Tumor Suppressor Genes	120
10.3	Molecular Basis of Cancer Development	124
10.4	Gene Regulation	125
10.5	Gene Regulation in Prokaryotes	126
10.6	Gene Regulation in Eukaryotes	128
10.7	Non-coding RNA and RNA Interference	130
10.8	Epigenetic Regulation of Gene Expression	133
10.9	Gene Regulatory Network	135
10.10	DNA Damage and Repair	138
10.11	Factors Causing DNA Damage	139
10.12	Types of DNA Damage	140
10.13	DNA Repair Mechanisms	141
10.14	DNA Damage-Related Effects	143
10.15	Protein Modification, Trafficking and Degradation	145
10.16	Polypeptide Chains	146
10.17	Assembly of Protein Subunits	148
10.18	Post-translational Modifications of Proteins	151
10.19	Transport and Localization of Proteins	153
10.20	Degradation of Cellular Proteins	155
10.21	Clinical Significance of Protein Modification, Trafficking and Degradation	159
10.22	Molecular Cloning and Genetic Engineering	163
10.23	Cloning Enzymes	164
10.24	Cloning Vectors	166
10.25	Principle and Procedures of Molecular Cloning	168
10.26	Genetic Engineering	172
10.27	Gene Characterization and Fractional Analysis	177
10.28	Nucleic Acid Molecular Hybridization	178
10.29	Polymerase Chain Reaction	182
10.30	Nucleic Acid Sequencing	187
10.31	Omics and System Biology	192
10.32	Genomics	193
