

Contents

Chapter 1 Introduction

- Section 1 The contents and theories in Histochemistry (001)
- Section 2 The basic requirements of Histochemistry methods (004)

Chapter 2 The Tissue Preparation

- Section 1 Tissue collection (006)
- Section 2 Fixation (006)
- Section 3 Tissue washing-up, dehydration and clearance (015)
- Section 4 Embedding (017)
- Section 5 Sectioning (018)
- Section 6 Adherence and mounting (020)
- Section 7 Buffer (022)

Chapter 3 The Carbohydrate and its Derivatives Histochemistry

- Section 1 Classification (024)
- Section 2 Histochemistry methods (026)

Chapter 4 The Nucleic Acid Histochemistry

- Section 1 DNA Histochemical demonstration (033)
- Section 2 Comparison demonstration of DNA and RNA Histochemistry (035)

Chapter 5 The Lipid Histochemistry

- Section 1 Overview (039)
- Section 2 Demonstration of lipids with physical methods (040)
- Section 3 Demonstration of lipids with chemical methods (042)

Chapter 6 Enzyme Histochemistry

- Section 1 Enzyme and its basic histochemical theory (044)
- Section 2 Histochemistry for common enzymes (049)

Chapter 7 The Basic Theory of Immunohistochemistry

- Section 1 Basic Immunology (054)
- Section 2 Common markers and their detection (057)
- Section 3 Basic conditions (063)

Chapter 8 Common Methods Used in Immunohistochemistry

- Section 1 Principles (074)
- Section 2 Immunofluorescence method (076)
- Section 3 Immunoenzyme technique (080)
- Section 4 Avidin-biotin method (083)
- Section 5 Protein A method (087)
- Section 6 Immunogold method and immuno gold-silver method (089)

Chapter 9 Specificity and Sensitivity of Immunohistochemistry

- Section 1 Specificity and specific staining (092)
- Section 2 Control experiment (093)
- Section 3 The methods to enhance immunohistochemical sensitivity (095)

Chapter 10 The Double-Staining in Immunohistochemistry

- Section 1 Double-staining Immunohistochemistry on serial section (100)
- Section 2 Immunofluorescence double labeling technique (100)
- Section 3 Immunoenzyme double staining technique (102)
- Section 4 Immunoenzyme-Immunofluorescence double staining (109)
- Section 5 Immunoenzyme-Immunogold double staining (109)

Chapter 11 The Lectin Histochemistry

- Section 1 Characteristics and application of lectin (111)
- Section 2 Application of lectin Histochemistry (113)

Chapter 12 The Progress of in Situ Display

- Section 1 The envision method (119)
- Section 2 The catalyzed signal amplification method (119)
- Section 3 The ferric oxide alternative method for HRP (120)

Chapter 13 In Situ Hybridization Immunohistochemistry

Section 1	Basic principle	(121)
Section 2	Probe preparation	(121)
Section 3	Procedure of in situ hybridization histochemistry	(123)
Section 4	Factors affecting in situ hybridization	(138)
Section 5	Control test	(139)

Chapter 14 In Situ Polymerase Chain Reaction Technique

Section 1	Basic principle	(143)
Section 2	Basic types	(143)
Section 3	Procedure	(144)
Section 4	Application of in situ PCR technology	(147)

Chapter 15 Electron Microscopic Cytochemical Technique

Section 1	Electron microscopic enzyme cytochemistry technology ...	(149)
Section 2	Electron microscopic Immunocytochemical technique	(161)

Chapter 16 The Quantitative Assay of Histochemistry Results

Section 1	The photomicrography	(177)
Section 2	The image analyzer	(178)
Section 3	The flow cytometry	(180)
Section 4	The laser scanning confocal microscopy	(185)
