

Contents

Preface and Acknowledgements v

How to Use this Book vi

1. FUEL METABOLISM AND NUTRITION: BASIC PRINCIPLES 1

- I. Metabolic Fuels and Dietary Components 1
- II. The Fed or Absorptive State 5
- III. Fasting 7
- IV. Prolonged Fasting (Starvation) 9

Review Test 11

2. BASIC ASPECTS OF BIOCHEMISTRY: ORGANIC CHEMISTRY, ACID-BASE CHEMISTRY, AMINO ACIDS, PROTEIN STRUCTURE AND FUNCTION, AND ENZYME KINETICS 19

- I. A Brief Review of Organic Chemistry 19
- II. Acids, Bases, and Buffers 20
- III. Amino Acids and Peptide Bonds 22
- IV. Protein Structure 25
- V. Enzymes 34

Review Test 39

3. GENE EXPRESSION (TRANSCRIPTION), SYNTHESIS OF PROTEINS (TRANSLATION), AND REGULATION OF GENE EXPRESSION 51

- I. Nucleic Acid Structure 52
- II. Synthesis of DNA (Replication) 58
- III. Synthesis of RNA (Transcription) 66
- IV. Protein Synthesis (Translation of mRNA) 70
- V. Regulation of Protein Synthesis 77
- VI. Recombinant DNA and Medicine 86

Review Test 95

4.	CELL BIOLOGY, SIGNAL TRANSDUCTION, AND THE MOLECULAR BIOLOGY OF CANCER	109
	I. Compartmentation in Cells; Cell Biology and Biochemistry 110	
	II. Cell Signaling by Chemical Messengers 116	
	III. The Molecular Biology of Cancer 125	
	IV. Cancer and Apoptosis 131	
	V. Cancer Requires Multiple Mutations 133	
	VI. Viruses and Human Cancer 133	
	Review Test 134	
5.	GENERATION OF ATP FROM METABOLIC FUELS AND OXYGEN TOXICITY	145
	I. Bioenergetics 145	
	II. Properties of Adenosine Triphosphate 147	
	III. Electron Carriers and Vitamins 148	
	IV. TCA Cycle 154	
	V. Electron Transport Chain and Oxidative Phosphorylation 159	
	VI. Oxygen Toxicity and Free-Radical Injury 164	
	Review Test 170	
6.	CARBOHYDRATE METABOLISM	181
	I. Carbohydrate Structure 181	
	II. Proteoglycans, Glycoproteins, and Glycolipids 185	
	III. Digestion of Carbohydrates 188	
	IV. Glycogen Structure and Metabolism 190	
	V. Glycolysis 197	
	VI. Gluconeogenesis 204	
	VII. Fructose and Galactose Metabolism 209	
	VIII. Pentose Phosphate Pathway 212	
	IX. Maintenance of Blood Glucose Levels 215	
	Review Test 220	
7.	LIPID AND ETHANOL METABOLISM	230
	I. Lipid Structure 232	
	II. Membranes 234	
	III. Digestion of Dietary Triacylglycerol 235	
	IV. Fatty Acid and Triacylglycerol Synthesis 237	
	V. Formation of Triacylglycerol Stores in Adipose Tissue 242	
	VI. Cholesterol and Bile Salt Metabolism 243	
	VII. Blood Lipoproteins 246	
	VIII. Fate of Adipose Triacylglycerols 251	
	IX. Fatty Acid Oxidation 252	
	X. Ketone Body Synthesis and Utilization 257	

- XI. Phospholipid and Sphingolipid Metabolism 259
- XII. Metabolism of the Eicosanoids 262
- XIII. Ethanol Metabolism 264
- Review Test 268

8. NITROGEN METABOLISM—AMINO ACIDS, PURINES, PYRIMIDINES, AND PRODUCTS DERIVED FROM AMINO ACIDS 279

- I. Protein Digestion and Amino Acid Absorption 280
- II. Addition and Removal of Amino Acid Nitrogen 282
- III. Urea Cycle 284
- IV. Synthesis and Degradation of Amino Acids 286
- V. Interrelationships of Various Tissues in Amino Acid Metabolism 294
- VI. Tetrahydrofolate, Vitamin B₁₂, and S-Adenosylmethionine 298
- VII. Special Products Derived from Amino Acids 302

Review Test 313

9. MOLECULAR ENDOCRINOLOGY AND AN OVERVIEW OF TISSUE METABOLISM 325

- I. Synthesis of Hormones 325
- II. General Mechanisms of Hormone Action (Only a Summary is Provided here as this has Already Been Covered in Chapter 4.) 329
- III. Regulation of Hormone Levels 329
- IV. Actions of Specific Hormones 330
- V. Biochemical Functions of Tissues 339

Review Test 350

10. HUMAN GENETICS—AN INTRODUCTION 359

- I. Mendelian Inheritance Patterns 360
- II. Genes 360
- III. Mutations 361
- IV. Inheritance Patterns 362
- V. A Summary of Inheritance Patterns is given in Table 10.1. 367
- VI. Cytogenetics 367
- VII. Population Genetics 372
- VIII. Multifactorial Diseases (Complex Traits) 372
- IX. Triplet Repeat Expansions 373
- X. Imprinting 374
- XI. The Genetics of Tumor Suppressors 376

Review Test 378

Comprehensive Examination 389

Index 431
