Preface

vii

- 1. Genetic Mechanisms and Molecular Biology** **1**
Slipped Strand Mispairing can Cause VNTR Polymorphism at Short Tandem Repeats (Microsatellites) • Large Units of Tandemly Repeated DNA are Prone to Insertion • Pathogenic Mutations • The Pathogenic Potential of Repeated Sequences • Interspersed Repeats often Predispose to Large Deletions and Duplications • DNA Repair • Physical and Transcript Mapping • Human DNA Clones can be Physically Mapped to any Desired Resolution
- 2. Gene Technology** **37**
Genetic Code • Genetic Change • Natural Selection and Evolution • Research and Technology • For Human Genetic Diseases and Genetic Disorders • DNA Sequencing and Genomics • Measures of Genetic Distance • In Eukaryotes • In Prokaryotes • Number of Chromosomes in Various Organisms • Prokaryotes • Karyotype
- 3. Mutations of Chromosomes** **63**
Non-Disjunction and Down's Syndrome • Mutation Frequency and Polyploidy • Recombinant DNA • Creating Recombinant DNA • Recombinant DNA Technology • Cloning Genes • Gene Therapy • DNA Microarrays
- 4. Transformation and Transfection of Gene** **89**
Gene Expression Assays • Rice Embryo Showing GUS Expression • Advantages and Disadvantages • Preparation and Hybridization Process • Medical Applications • Virtual Karyotype • Applications • Chronic Lymphocytic Leukemia • Acute Lymphoblastic Leukemia • Malignant Rhabdoid Tumors • RT-PCR Principles and Procedure • Polymerase Chain Reaction • Application of PCR • DNA in Forensic Entomology • The Technology • Comparison to DNA Microarrays

5. Advancement of Genetic Technology	139
Gene Pool Concept in Crop Breeding • Models of Gene Flow • Density Independent Dispersal • Animal Dispersal Mechanisms • Processes and Consequences • Genetic Erosion in Agricultural and Livestock Biodiversity • Genetic Admixture • The Concept of Miscegenation • Demographics of Ethnoracial Admixture • Domestic and Wild Hybrids • Hybrid Plants	
6. Latest Genomic Revolution	208
Modelling Biological Systems • Cellular Model • Protein Structure Prediction • Chou-Fasman Method • GOR Method • De Novo Protein Structure Prediction • Homology Modelling • Threading (Protein Sequence) • Protein-protein Interaction Prediction • CASP • Human Biological Systems • Simulated Growth of Plants • Ecosystem Model • Mathematical Modelling of Infectious Disease • Basic Reproduction Number • Epidemic Model • Macromolecular Docking • Scoring Functions for Docking • Critical Assessment of Prediction of Interactions • Biopharmaceutical • Pharming (Genetics) • Molecular Farming
