Preface

xi

1. Introduction	1-6
2. Basics of Probability Theory	7-37
2.1 Probability	7
2.2 Simple and Compound Events	8
2.3 Addition and Multiplication Laws	10
2.4 Conditional Event and Multiplication Law and Theorem of Probability	13
2.5 Multiplication Theorem	14
2.6 Partitioning of Sample Space	18
2.7 Bayes Theorem	18
2.8 Use of Matrix Theory in Solving Problems in the Field of Probability	20
2.9 Common Mating Systems	24
3. Distributions	38-86
3.1 Expectations and Moments of a Variable	40
3.2 Discrete and Continuous Distributions	43
3.3 Analysis of Variance (ANOVA)	69
3.4 Fixed and Random Effects Model: Major Difference	73
3.5 <i>t</i> -test and Inferences	75
3.6 Duncan's Multiple Range Test (DMRT)	77
Appendix 3.6	85
4. Inference: Essential Basics	87-98
4.1 Important Concepts of Inference	87
4.2 Tests of Significance, Confidence Limit and Confidence Interval	91
4.3 Likelihood	93
4.4 Likelihood Ratio	97

5. Quantitative Genetics: Genetic Analysis of Phenotypic Variation	99-136
5.1 Basics	99
5.2 QT and Genetic Values: Case of a Single Gene	101
5.3 Phenotypic and Genetic Variance	108
5.4 Alternate Formulation of Additive Genetic Variance and Interpretation of Additive Effect	109
5.5 Generation Means and Genetic Effects	114
5.6 Additive Genetic Variance and Natural Selection	116
5.7 Two Genes	119
5.8 QT Values in Two Genes	124
5.9 Genetic Effects and Variances in Two Genes	127
5.10 Various Types of Gene Interaction	130
6. Inbreeding and Heterosis	137-160
6.1 Genotypic Frequencies Under Inbreeding	138
6.2 Li's Formulation of Inbreeding Coefficient	140
6.3 Additive Genetic Variance Under Inbreeding	141
6.4 Useful Relationships Involving Inbreeding	144
6.5 Heterosis	147
6.6 Inbreeding Depression	156
6.7 Breeding Value	158
7. Genetic Divergence	161-183
7.1 Basics of Genetic Divergence	161
7.2 Numerical Example	164
7.3 Importance of Characters in Genetic Differentiation	172
7.4 Genetic Divergence and Heterosis	173
7.5 Implications of Genetic Divergence-Heterosis Hypothesis in Plant Breeding	181
<i>Appendix 1: The process of obtaining linear combinations Y using error variance-covariance matrix in Section 7.2</i>	182
8. Mating Systems	184-237
8.1 Diallel Crosses	185
8.2 Covariance Between Relatives	188
8.3 Half-sibs and Full-sibs	191
8.4 Covariance of Half- and Full-sibs in the General Case	197
8.5 Diallel Crosses (Griffing's Approach)	199
8.6 Line $\times$ Tester Design	214
8.7 Partial Diallel Cross	223
8.8 Multiple Crosses	225
8.9 Diallel Crosses: Some General Observations	228

8.10 Inferences Derived from Analysis of Diallel Crosses	229
8.11 Covariance of Combining Ability	236

9. Selection 238-262

9.1 Basics	238
9.2 Improvement by Selection	242
Annexure 9-1	259

10. Populations 263-276

10.1 Types of Equilibria	263
10.2 Stability of Equilibria	265
10.3 Mean Fitness Curve and Equilibria	267
10.4 Synthetic and Composite Populations	271
10.5 Pathway to Construct Populations	274

Appendix 1: Elements of Matrices and Determinants, and Basics of Differentiation	277
---	-----

Appendix 2: Permutations and Combinations	294
---	-----

References	307
------------	-----

Index	315
