

Preface	8		
1 Introducing the reed warblers	10	3 Habitat characteristics	54
1 An imaginary journey round the world's reed warblers	16	1 Wetlands	56
Camargue, France	16	Swamps, wet marshes, and mangroves	57
Hortobágy, Hungary	16	Reedswamps and tall aquatic emergents	57
Lake Victoria and Mount Elgon, Uganda	17	Mangroves	62
Cousin Island, Seychelles	17	2 Dry marsh, tall herbaceous, and wet meadow communities	62
Bandar Abbas and adjacent coast, southern Iran	18	3 Wetlands in sharper focus for passerines	63
Novosibirsk, western Siberia, Russia	19	The varied nature of wetlands	63
Khao Sam Roi Yot, Thailand	20	The water-depth gradient	65
Henderson Island, Polynesia	20	4 Scrub, shrubby, and woodland vegetation	66
2 A factual journey round the book's chapters	20	5 Habitats for migration and in winter	67
2 Systematics – relationships and diversification in the family of acrocephalid warblers	26	4 Foraging, diet, and habitat use	72
1 Mistaken identities and molecular methods	28	1 A variety of 'search-and-capture' tactics	73
2 What are acrocephalid warblers?	30	2 Habitat and food supply – a comparison of six wetland species	75
Characterization and boundaries of a uniform family	30	Making a living in the centre or on the edge	76
Are acrocephalids truly uniform?	35	3 The food spectrum	78
3 Characterization of the family's genera and clades	35	Diet specificities and food selection	78
Nesillas (brush warblers)	37	Prey size	79
Calamonastides (Papyrus Yellow Warblers)	37	4 Climbing the ladder of success in vertical habitat	80
Phragamaticola aedon (Thick-billed Warblers)	37	5 Feeding techniques	82
Iduna species (bush and scrub warblers)	39	6 Diurnal niches and weather-dependent strategies	84
Hippolais species (tree warblers)	39	7 Learning the whys and wherefores	84
Acrocephalus warblers (reed warblers)	39	5 Integrated ecomorphology – challenges and solutions	88
Large Acrocephalus warblers	40	1 The insectivorous reedbed passerine guild	89
Small Acrocephalus warblers	42	Acrocephalids do it their way in a vertical world	90
4 Species and speciation	43	Juvenile development	92
Speciation – the genesis of reproductive barriers	44	Straddling the reedbed	93
Stages of speciation and 'secondary contact'	45	2 Other forms of locomotion and habitat use	94
Hybridizations and hybrid zones	47	3 Adaptations to migration	96
The case of Melodious and Icterine Warblers	48	4 Measuring diversification in the acrocephalids	99
Other hybrids	49		
5 Origins and distribution of the reed warblers	50		

6 Competition and coexistence	104	8 Reed warblers reproduced	138
1 Intraspecific territoriality and densities	105	1 Masterpieces of construction	139
What is territoriality for?	106	Nest sites	140
The case of Great Reed Warblers and Sedge Warblers	109	Nest building	142
Getting together socially	110	Nest characteristics	143
Habitat structure and population density	111	2 Getting the timing right	144
2 Interspecific aggression and territorial overlaps	113	3 Reproductive effort	148
Marshland warblers keep their distance	113	A brief excursion into life history	148
The case of Great and Eurasian Reed Warblers	114	Clutch size	149
Singing from a different songsheet	114	Seeing it through from incubation to post-fledging	150
The benefits of getting rid of the competition	115	4 Brood losses	153
Recognizing other species	116	Predators	153
Competition and shared parasites	116	Nest defence and anti-predator strategies	154
		5 Reproductive success – fitness matters	156
		Inbreeding and dispersal	158
		6 Life span and adult survival	159
7 A song worth warbling	118	9 Coping with the Cuckoo's trickery	160
1 Diversity of song	119	1 Brood parasitism by Common Cuckoos	161
Complexity and structure	120	2 Acrocephalid hosts and parasitism rates	163
Tempo and syntax	121	3 On the battlefield: before the egg is laid	163
2 Song and systematic relationships	122	4 On the battlefield: an alien egg in the nest	166
Dendrogram: a diagram of branches	125	5 How to deal with this strange new chick	168
3 Why do birds sing?	127	The breeding success of Common Cuckoos	169
The case of six reed warbler species	128	6 Mounting a varied counter-attack	170
4 Sexual selection and honest signals	130	Cuckoo-related breeding losses by reed warblers	172
The example of Sedge and Great Reed Warblers	131	7 Flexibility in a world of change	173
5 Singing different songs	133	Gene flow, immigration, and host tolerance to	
Habitat and body size	133	multiple parasitism	173
Will they hear me from here?	135	Habitat structure	174
Migration, mimicry and more	135	Phenotypic plasticity	174
		Combination is the key	174

10 A battle of the sexes

- 1 Breeding systems and resources
The case of six marsh-nesting species.....
.....and the case of other acrocephalids
- 2 Social versus genetic mating systems
Why should females be promiscuous?
What's in extra-pair copulation for females?
- 3 Monogamy
- 4 Choosing to breed cooperatively
The case of Seychelles Warblers
Extra-pair paternity and the benefits of helping
Benefits for dominant birds and offspring sex ratio
Formation of families and grandparent helpers
Other acrocephalids
- 5 Polygyny
The polygyny threshold model
What's in it for females?
What's in it for males?
Extra-pair paternity
Offspring sex ratio
Polyterritorial behaviour
- 6 Promiscuity – no pair bonds for Aquatic Warblers
- 7 The evolution of mating systems

11 Warblers on the move and in moult

- 1 Getting organized for migration
Accumulating fat
Time is of the essence
- 2 Migration routes and wintering grounds
Migrating towards Africa
Crossing central Asia
Other geographical factors
- 3 Post-fledging movements, dispersal, and site fidelity
Nocturnal exploratory flights
Shall we go or shall we stay?
- 4 Mortality, predation, and parasites
- 5 Moult
Strategies for when and where to moult
Scheduling the time and duration of moult

12 Our island home

- 1 Island species – relatives, distribution, and colonization history
- 2 Island habitats
- 3 Island conditions and phenomena
- 4 Morphological adaptations and the expansion of niches
- 5 Communication, breeding biology, and further idiosyncracies
- 6 Population trends of island warblers
The case of the Laysan and Nihoa Millerbirds
- 7 What it takes to be a successful reed warbler colonizer

13 A life of change – population and conservation issues

- 1 Range, abundance, and species numbers
- 2 Reasons to be positive
- 3 Negative population trends and their causes
The example of European reed-dwelling acrocephalids
Habitat loss
Reedswamp decline
Abandoning agricultural management
The case of Aquatic Warblers, part one
- 4 Some consequences of climate change
Changes on the breeding grounds
Changes on the wintering grounds
- 5 Conservation matters
Restoration of habitats
The case of Aquatic Warblers, part two
- 6 Aspects of population genetics

14 Ecological equivalents and convergence	266
1 Morphological convergences	268
Marsh dwellers in South America	270
Papyrus birds	272
Small changes – great consequences	272
2 Behavioural convergences	274
Interspecific aggression	274
Mating systems	275
Polygyny in deep-water marshes	275
Promiscuity on marsh edges	277
15 Postscript	280
Acknowledgements	288
References	290
Index	316
