Preface.....	2
1. Introduction.....	3
1.1 Vegetation and macroclimate.....	3
1.2 Macro, meso and microclimate.....	7
2. Microclimate: principles and processes.....	12
2.1 Energy balance of a dry surface.....	12
2.2 Solar radiation.....	13
2.3 Heat radiation.....	18
2.3.1 General.....	18
2.3.2 Atmospheric long-wave radiation.....	19
2.3.3 Long-wave radiation in spatially complex situations.....	22
2.3.4 Net radiation.....	23
2.4 Heat transfer to the air.....	25
2.5 Air humidity.....	31
2.6 Evaporation.....	33
2.7 Thermal properties of the soil surface.....	38
2.7.1 Temperature and energy budget of a wet surface.....	38
2.7.2 High surface temperatures.....	40
2.8 Thermal properties of the soil.....	44
2.9 The situation at night.....	52
2.9.1 Energy balance, night frost.....	52
2.9.2 Water relations, dew formation and hoarfrost.....	59
2.10 Wind.....	64
2.11 Snow.....	69
2.12 Aspect and inclination.....	72
3. The influence of vegetation on microclimate.....	83
3.1 Introduction.....	83
3.2 The energy and water balance of the vegetation.....	84
3.3 Vegetation and microclimate.....	87
3.4 The microclimate of forests.....	91
3.4.1 Temperature and humidity.....	91
3.4.2 Precipitation.....	98
3.4.3 Light climate.....	100
3.5 The microclimate of heathland.....	103
3.6 The microclimate of juniper scrub.....	105
3.6.1 Vegetation.....	105
3.6.2 Temperature and radiation.....	106
3.6.3 Precipitation.....	108
3.6.4 Evaporation, air and soil moisture.....	111
3.6.5 Periodicity of fungi.....	112
3.6.6 Litter fall.....	112
3.6.7 Microclimatological experiments.....	113
3.7 The microclimate of grassland.....	116
3.7.1 Microclimatological grassland types.....	116
3.7.2 Vegetation mosaic and temperature mosaic in grasslands.....	121
3.8 The microclimate of vegetation edges and gaps.....	124

3.8.1	Introduction.....	124
3.8.2	The open shade.....	124
3.8.3	Warm fringes, south sides.....	128
3.8.4	The microclimate of gaps.....	130
4	The biological significance of the microclimate for plants and animals.....	133
4.1	The significance of temperature and air humidity for living organisms.....	133
4.1.1	Introduction.....	133
4.1.2	Evaporation and transpiration.....	134
4.1.3	Heat and water budget of vascular plants.....	136
4.1.4	Heat and water budget of poikilothermic animals.....	141
4.1.5	Heat and water budget of homoiothermic animals.....	143
4.2	Resistance and preference.....	152
4.3	Phenological aspects.....	160
4.4	The influence of microclimate on texture and structure of vegetation.....	163
4.4.1	Introduction.....	163
4.4.2	Leaf size.....	164
4.4.3	Leaf consistency.....	166
4.4.4	Leaf inclination.....	166
5	The analysis of the microclimate.....	170
5.1	Methods of investigation.....	170
5.1.1	Objects of investigation.....	170
5.1.2	Choice of measurement points, location and number.....	171
5.1.3	Time of measurement.....	172
5.1.4	Measurement height.....	173
5.1.5	Choice of parameters and locations.....	173
5.1.6	How to measure.....	173
5.2	Instruments and investigation techniques.....	174
5.2.1	General remarks.....	174
5.2.2	Temperature measurement.....	175
5.2.3	Measurement of air humidity.....	181
5.2.4	Measurement of radiation.....	184
5.2.5	Measurement of heat flow.....	186
5.2.6	Measurement of wind.....	187
5.2.7	The use of models.....	188
5.2.8	Tools for site descriptions.....	189
6	Birds in the sun.....	192
6.1	Energetics and energy flows of birds.....	192
6.1.1	Introduction.....	192
6.1.2	Energetics of the bird.....	192
6.1.3	Production and flow of energy.....	196
6.1.4	Operative temperatures in winter.....	198
6.2	Observations on behaviour.....	200
6.2.1	Field observations on sunning birds.....	200
6.2.2	Sunning behaviour against parasites.....	203
	Epilogue.....	208
	References.....	210
	List of symbols.....	222
	General Index.....	224
	Index of Latin names.....	230
