

Contents

Chapter 1

1—12

HUMAN RETROVIRUS PSEUDOGENES

Non-Long Terminal Repeat, Line Elements, Ancient SINEs, Mechanism of Processed Pseudogenes, Endogenous Retroviruses of Man, Ancient Copy of DNA, Concluding Remarks

Chapter 2

13—35

BACTERIAL GENOMIC SCREENING

Research Screening, Screening, Screening of Antibacterial Cell, Concluding Remarks

Chapter 3

36—48

ANALYSING MICROBIAL GENOMES

Comparative Analysis, Analysing Integrated Microbial Genome, Method of Analysis, Profile Analysis, Tools and Techniques, Occurrence Profile, Interpreting Results, Gene Model Validation, Concluding Remarks

Chapter 4

49—57

VISUALIZING MICROBIAL GENOMES

Concept of Tags, Construction of Genomic Map, Preparation of Genome Circle, Plotting Genomic Data, Plotting Classification-Style Data, Plotting Numerical Data, Graphical Presentation of Navigation, Using Mouse Over, Marking Genes, Marking COGs, Finding Desirable Genes, Removing Unwanted Genes, Plot Summary, Print Order, Invisible Menu, Bring into Force, Platforms, ActiveTcl, Perl, Points to Remember

PROKARYOTIC FINGERPRINTING

Method of Southern Blotting, Basic Requirement, Isolation of DNA for Fingerprinting, DNA Hybridization, Fluorescent Fingerprinting, Agarose Fingerprinting, Restriction Digests of Clones, Electrophoretic Method, Southern Blotting, Hybridization, Procedures, Preparing DNA for Fingerprinting, Preparing DNA for Southern Blotting and Hybridization, Fluorescent Fingerprinting, Agarose Fingerprinting, Entry of Fingerprint Data Using Image, Analyzing Fingerprints Using FPC, Clones for Southern Blotting, Electrophoretic Method for Southern Blotting, Methods for Southern Blotting, Hybridization, Points to Remember

SEQUENCING BACTERIAL GENOMES

Purpose of Sequencing Genomes, Antimicrobial Resistance, Applications of Genomic Sequences, Comparative Genomes, Determinants, Concluding Remarks

PROKARYOTIC GENOMES

Procedures, Computerized Preservation, Observing sRNAPredict2, Stage 1, Stage 11, Stage III, Stage IV, Points To Remember

PROTEIN-PROTEIN INTERACTION

Mapping Bacterial Proteome, Proteomics of Subcellular Products, Applications of Proteomics, Proteomic "Signatures", Objectives, Modifications After Synthesis, Posttranslational Changes, Protein-Protein and Protein-Ligand Interactions, Conclusions

GENETIC DIVERSITY IN BACTERIA

Micro-arrays, Bacterial Genomic Sequences, Genomotyping, Molecular Evolution and Diversity, New Studies, Requirements, Slides, Amplified Probes, Objectives, Prehybridization Buffer, Hybridization Studies, Scanners and Software, Procedures, Preparation and Printing of Probes, Hybridization and Posthybridization Techniques, Methods of Analysis, Realistic Goal, Points to Remember

GENOME ALIGNMENT

Requirements, Procedures, Local Multiple Alignments, Evolutionary Guide Tree, Marking

Anchors, Gapped Alignment, Progressive Alignment, Parameters of Alignment, Points to Remember

Chapter 11

137—147

PROKARYOTIC ARTIFICIAL CHROMOSOME

BAC Vectors, Requirements, Procedures, Making BAC Vector, High Molecular Weights Genomic DNA, Ligation, Electroporation, Preparation of BAC DNA, Colonial Hybridization, Points to Remember

Chapter 12

148—159

GENOMIC STUDY IN TOXOPLASMA gondii

Requirements, Procedures, Collecting Samples, Independent Genetic Markers, Generic Oligonucleotide Array, Methods of Preamplification, Allele-Specific Primer, Points to Remember

Chapter 13

160—181

CLONAL COMPLEX

Bacterial Recombination, Neutral Variation in Populations, Advantages, Prokaryotic Clone, Producing Clonal Complexes, Molecular Diversity, Spectrum of Genetic Variation, Bacterial Population Structures, Periodic Selection, Occurrence of Clones, Clonal Diversification, Recombination Frequency, Relative Contribution of Recombination, Concluding Remarks

Chapter 14

182—203

PHYLOGENOMICS

Gene Specific, Production of Quality Microarrays, Requirements, Production of Microarray, Microarray CGH, Methods, Production of Microarrays, Microarray CGH, Microarray based Methods, Conclusions, Points to Remember

Chapter 15

204—219

CLONING IN TRICHOMONAS

Requirements, Isolating Nucleic Acid, Hsp70 Gene of *T. hominis*, mitHsp70 Gene of *T. hominis*, Genetic Engineering, Procedures, Isolation of Nucleic Acids, Hsp70 Gene of *T. hominis*, 5'-End mitHsp70 Gene of *T. hominis*, Cloning of Gene Family, Points to Remember

Chapter 16

220—241

PHYLOGENY OF BACTERIA

Phenetic Classification, Description of Species, Molecular Taxonomic Parameters, Genomic

DNA Analysis, Evolutionary Path, Gathering and Sequencing Data, Reliability of Gene Trees, Evolutionary Chronometers, Sequencing of 23S rRNA, DNA Gyrase B Subunit Gene, Urea Accessory Gene, RNase P, Other Protein Encoding Genes, The Polyphasic Path, Concluding Remarks

Chapter 17

242—249

MOLECULAR TYPING

Requirements, VNTR Analysis, Capillary Electrophoresis-Based VNTR, Procedures, Gel-Based VNTR, Growth and Lysis in Bacteria, Points to Remember, Gel-Based VNTR, Capillary Electrophoresis-Based VNTR, Other Points to Remember

Chapter 18

250—254

PROTEIN EXPRESSION SCREEN

Requirements, Procedures, Expression of Proteins, Dot Blot Techniques, Points to Remember

Chapter 19

255—260

PROTEIN SYNTHESIS IN *E.coli*

Requirements, Procedures, Expression Plasmids, Purification of Proteins, Isolation of Protein, Points to Remember

Chapter 20

261—279

GENE EXPRESSION IN BACULOVIRUS

Requirements, Cell Line of *E. coli*, Enzymes, Chemicals and Kits, Plasticware, Instruments, General Stock Solutions and Media, Solutions and Media for Cloning, Buffers for Protein Purification, Procedures, Initiation of Cell Cultures, Cloning of Desirable Genes, Preparing Bacmid, Transposition on Bacmid DNA, Transfection and Infection of Insect Cells, Isolation and Purification of Plaque, Recombinant Viruses, Small-Scale Expression, Criteria of Expression, Points to Remember

Chapter 21

280—288

WHOLE GENOME

Requirements, Enzymatic Digestion, Annealing, Ligation, PCR Amplification, Procedures, Sequential Digestion, Annealing, Ligation, Amplification, Separation of Fragments, FAFLP Fragment Analysis, Points to Remember

INDEX

289—306
