

Contents

Chapter 1

1-11

INTRODUCTION

Status of Centromere, In Eukaryotes, Human Centromere, Phylogeny of a-Satellite, Phylogenetic Characters, Centromeric Organization, Genetic System of Centromere, Dicentric Chromosomes, Neocentromeres, Usual Centromeres, Chromosomal Biotechnology

Chapter 2

12-34

EVOLUTIONARY TREES

Human Immuno Deficiency Viruses, Finding Inter Relationships, Understanding the Evolutionary Flow, Naming the Graphs, Biological Entities, Methods of Constructing Trees, Basic Methods, Parsimony Methods, Distance Methods, Conceptual Issues, Evolutionary Clock, Mutation Mechanism, Site Substitutions, Estimating K, Evolution of Sites, Distance Calculation, Evolutionary Tree, Comparative Sequences, Likelihood of Data, Mathematical Study, Concluding Remarks

Chapter 3

35-44

EVOLUTION OF DNA SEQUENCING

Requirements, Procedures, Points to Remember

Chapter 4

45-57

DETERMINING DNA VARIANTS

Requirements, Mathematical Calculation of DNA Melting, PCR, Allele separation, Procedures, Target Sequence of DNA, PCR, Capillary Electrophoresis, Points to Remember

HEREDITARY CHANGES IN EVOLUTION

Basic Principles, Hereditary Changes in Man, Biostatistics Calculation, Structure of Human Population, Allelic Recombination, Recombination and Distance Between Genes, Measurement and Recombination, Non Random Allelic Association, Quantitative Description of LD, Decaying Linkage Disequilibrium, Factors Affecting LD, Human Genome and LF, Gene Frequencies in Populations, The Wright-Fisher Model as a Markov Chain, Mutation in Evolution, A Stochastic Process, Coalescence Model, Variation in Two DNA Sequences, Establishing Ancestral Relationship, Estimating Recombination, Concluding Remarks

Chapter 6

93—104

OBTAINING GENOMIC SEQUENCE

Requirements, Procedures, Detecting Sequence of Genome, Laboratory Preparation, Use of Mercator, Creating Input Files for Mercator, Running Mercator, Genome's Component Sequence, Landmarks for Orthologous Segments, Orthology Mapping, Nucleotide-Level Alignment Step, Slice Alignment Program, Points to be Noted

Chapter 7

105—112

PHYLOGENY AT THE SEQUENCE LEVEL

Requirements, Role of Computer, FASTA-Like Format, Procedures, GeneSyn Package, Default Parameters, Additional Parameters, Display on the Screen, Points to Remember

Chapter 8

113—124

REPOSITIONING OF CENTROMERE

Evolutionary Approach, End to End Fusion, Cytogenetics of Centromeres, Phylogeny of Third Chromosome, Phylogeny of Centromeres and Telomeres, Seeding of New Centromere, Segmental Duplication, Generation of Acentric Fragments, Sequencing Project

Chapter 9

125—132

PROTEIN SEQUENCE ALIGNMENT

Requirements, Pairwise Sequence Alignment, Algorithm Implementations, Points to Remember

Chapter 10

133—146

ANALYZING THE COPY NUMBER

Requirements, Cancer Cell Lines, .cel and .chp Files, Installation, Chip Description Files (CDF),

Procedures, Extracting Data From .cel and .chp Files, Modes of Analyzing Copy Number, Inferred Values, Calculation of log2 Ratio, Abnormalities and Imbalances, Points to Remember

Chapter 11

147—165

CULTURE OF EMBRYONIC CELLS

Requirements, Culture Techniques, ES Cell Clones, Staining Method for b-Galactosidase, Production of Chimeras, Procedures, Feeder Cell Monolayers, Electroporation, Production of Chimeras, Mouse Breeding, Identification of Tagged Gene, Points to Remember

Chapter 12

166—180

EXAMINE MUTATIONS

Requirements, Presentation, Hydrolytic Action, Electrophoresis, Autoradiographic Analysis, Procedures, Presentation, Restriction Enzyme Digestion and Isotope Labeling, Electrophoresis Method, Electrophoresis Gels, Second Stage Technique, Analyzing Results, Additional Hydrolytic, Points to Remember

Chapter 13

181—189

TRANSCRIPTION FACTORS

Requirements, Procedures, Methods of Feeding, Parameters, Interpretation, Web Tools, Points to Remember

Chapter 14

190—206

PHYLOGENY OF CHROMOSOMES

Primate Karyology, Chromosomes of Prosimians, Chromosomes of Platyrrhines, Chromosomes of Catarrhines, Chromosomes of Hominoids, Phylogenetic Rearrangements in Primates, Chromosomal Recapitulation, Genomic Context, Head to Head Arrays, Molecular Characteristics, Reciprocal Translocation t(4;19) in the Gorilla, Inversions of Chromosome 7 in Great Apes, Inversions Pericentric in Chimpanzee and Gorilla, Centromere in the Great Ape Ancestor, Inversion Pericentric in Chimpanzee, Inversion Pericentric in Chimpanzee, Inversion Pericentric in Human, Diversified Chromosomal Changes, Phylogeny of Genomic Changes, Concluding Remarks

Chapter 15

207—221

DETECTING MUTATIONS

Requirements, Step Wise Methodology, Sequencing Reactions, Isolating Reactions, Sequencing of DNA, Use of Computer, Procedures, Qiagen Kit, PCR Reaction, Cycle Sequencing Reactions, Big Dye Cycle Sequencing Kit, Extracting Samples, ABI DNA Analyzer, Analyzing Results, Interpretation of DNA Sequencing, Points to Remember

EVOLUTIONARY FOOTPRINTING

Requirements, Accessing the Gibbs, Materials, Methods, Sequence Data, Procedures, Sequence Phylogenetic, Sampling, Building Options, Experimental Evidence, Binding Sites, Results, Orthologous Promoter Sequence, Points to Remember

DNA LIBRARIES AND MUTAGENESIS

Requirements, XL 1-Red Mutator in *E. coli*, Error-Prone PCR Technique, DOP Mutagenesis, Procedures, In Vivo Mutagenesis Method, Error-Prone PCR, DOP Mutagenesis, Points to Remember

EVOLUTIONARY HYBRIDIZATION

Materials, Extraction of Total Genomic DNA from Environmental Samples, Suppressive Subtractive Hybridization (SSH), Cloning and Sequencing of Library, One Shot[®] TOP 10 Electrocomp[™] *E. coli* and Reagents, Confirmation of Tester-Specific DNA Fragments by Dot-Blot and Southern Blot Hybridizations, Total RNA Extraction and 16S rRNA Dot-Blot Hybridization, Methods, Extraction of Total Genomic DNA from Environmental Samples, Suppressive Subtractive Hybridization, Confirmation of Tester-Specific DNA Fragments by Dot-Blot and Southern Blot Hybridizations, Total RNA Extraction and 16S rRNA Dot-Blot Hybridization, DNA Sequencing and Bioinformatic Analyses, Points to Remember
