

Contents

Chapter 1

1-9

ABBERATION OF UNUSUAL GENOME

Conformations of Unusual DNA, Structural Translocation, Non-B DNA Conformations Cause Rearrangements, Chromosomal Rearrangements, Rearrangement and Anti Male Sterility, Rearrangements of Chromosomal Segments Causing on Chogenic Effect, Resequencing Causing Malignancy in Lymph Glands, Neurological Disorders, Remarks, Conclusion

Chapter 2

10-20

BACTERIAL GENOME SEQUENCING

Individual Sequences, Generating Gap, Assembling cotigs, Physical Mapping & DNA Sequencing, Role of Genetic Code a Determining Nucleotide Sequence, Searching New Genomes, Multiple Sequence alignment, Products of predicted genes

Chapter 3

21-28

SEQUENCING GENOME

Whole-Genome Alignments, Accessing Browsers, How to Display Browser, Control Panel, Pair Wise Alignment, Toolbar Control, Text Browser, Special Cases of Alignment, Visualizing Alignments, Points to Remember

Chapter 4

29-39

NUCLEOTIDE POLYMORPHISMS OF GENOMIC DNA

Requirements, Cultural Conditions, Method of Slide Preparation, Technique of Fabrication, Postprocessing Slides, Labeling, Hybridizations, Procedure, Culture of Bacteria, Obtaining Genomic DNA, Slide Preparation, Technique of Fabrication, Postprocessing Slides, Labeling, Hybridizations, Mathematical Calculation, Detection of Locus, Corelative Studies, Assessment of Samples, Points to Remember

GENETIC MAPPING

Problem in Computational Biology, Algorithmic Solution, Restriction Mapping, Genomic Libraries, Number of Cosmid Clones, Constructing Restriction Maps, Assembly of Contigs, Reality check, Fingerprinting

GATHERING GENOME SEQUENCES

Large-Scale Genome Sequences, Genomic Sequence *Pseudomonas Aeruginosa*, Genomic Sequence of *Salmonella Enterica*, Genomic Sequence of *Yersinia Pesitis*, Genomic Sequence of *Staphylococcus Aureus*, Genomic Sequence of *A Streptococci*, Genomic Sequence of *Mycobacterium Spp.*, Genomic Sequence of *Helicobacter Pylori*, Detecting Gene Contents, Prokaryotic Genomic Hybridization (Comparative Approach), Deleting Common Sequence, Subtractive Cloning, Analysing Complete Genomic, Comparative Proteomics

MAPPING SNPs

Requirements, Supplied by Affymetrix Affymetrix Reagents, Equipment and Software, Hydrolytic Effect of Restriction Enzyme, Ligation, Amplification Technique, Purification and Elution, Marking, Hybridization, Procedures, Hydrolysis of XbaI, Ligation, Amplification Technique, Isolating the Amplification Product, Process of Fragmentation, Labeling, Preparation of Hybridization, Method of Staining, Use of Scanner, Analyzing the Results, Points to Remember

IDENTIFYING PROTEINS

Requirements, Procedures, De-Staining Technique, Reduction of Disulfide Bonds, Enzymatic Hydrolysis Protein, Observing Peptides by MALDI-TOF MS, Finding Protein Databases, Weak Points, Points to Remember

NON CODING RNA

Availability, Handling, Output Page, Points to Remember

TRANSPOSABLE ELEMENTS

Gene Flow in Bacteria, Translocation of nucleolide, Model of Transposable Elements, Distribution of Transposable Elements, Functional status of Transposable Elements, Reporting

Transposable Elements, Various Categories of transposable Elements, Composite Structure Transposon, Transposons of complicated Genetic structure, Gene Cassettes, Categories of integrons, Specific transposable elements, New Type of Element, Transposition of Site-Specific elements, Additional type of elements, Element Encoding Resistance to Antibiotics, Site Designated Element Tn554, Transposable Elements, Genomic Descendants, Insertion of One DNA Sequence Into Another DNA, Summary

Chapter 11

134—144

MOBILE ELEMENTS

ALU Elements, Introducing Technique, Phylogeny of Alu Elements, Alu Elements in Human Genome, Genomic Insertion in Coding Area, After Effects, Changes due to Genetic Instability, Phylogenetic Effects of Alu, Control, Amplification

Chapter 12

145—154

PROCESS OF IDENTIFICATION

Requirements, Feeding, Web Based Tool, Sources Used, Procedures, Programming, Results, Discussion, Applicability of Installation, Points to Remember

Chapter 13

155—171

ncRNA AND RNAz

RNAz, RNA Alifold, Diagnostic Features, Main Goals, Topography, Requirements, Procedures, Loading Optional Software, Loading Required Files, Basic Usage of RNAz, Modernization of RNAz, Genomic Screens of Commercial Level, Use of Statistics, Points to Remember

Chapter 14

172—181

cDNA MACROARRAY from *Arabidopsis thaliana*

Requirements, Sampling, Laboratory Preparation, Method of Hybridization, Procedures, Laboratory Preparation, cDNA Macroarray Filters, Method of Hybridization, Mathematical Calculations, Subset Macroarray Filters, Points to Remember

Chapter 15

182—191

MULTIPLE ALIGNMENT OF RNAs

Procedures, Scoring of Alignment, Multiple Alignment, Experimental Approach, Final Alignment, Points to Remember

Chapter 16

192—207

BEAD ARRAYS TECHNOLOGY

Gene Expression Profiling, Requirements, Kit for Extraction of RNA, Reagents Required,

Additional Reagents Required, Array Matrix and Bead Chip, Array Imaging, Procedures, RNA Extraction from FFPE Tissues, DASL Assay Protocols, Laboratory Synthesis of cDNA, Formation of Array Hybridization, Conversion of Hybridization to Bead Arrays, Technique for Imaging, Analysing Data, Applications, Points to Remember

Chapter 17

208—216

OPEN READING FRAMES OF GENOMES

Softwares, Experimental Approach, Statistics Methods, Processing Data, Exploring Data, Handling ORF Sequences, Handling ORFeome, Points to Remember

Chapter 18

217—240

SYNTHESIS OF cDNA LIBRARY

Requirements, Obtaining Pure RNA, Synthesis of cDNA Library, Amplification of the Library, Screening of the Library, In Vivo Excision of Clones, Miniprep Plasmid Isolation, Role of Restriction Enzymes, Synthesis of Probe, Method of Northern Blotting, Northern Blots, Methods, Extraction of RNA, Synthesis of cDNA Library, Amplification of the cDNA Library, Screening of the cDNA Library, In vivo Excision of Clones, Separation of Miniprep Plasmid, Introducing Plasmid DNA, Synthesis of Probe, Method of Northern Blotting, Probing the blots, Analyzing Clones, Points to Remember

Chapter 19

241-250

DETERMINING CHANGES IN GENE EXPRESSION

Requirements, Obtaining Clones, Method of Printing, Hybridization, Method of Scanning, Procedures, Process of Amplification, Mechanism of Printing, Labeling Samples, Washing, Quantification, Mathematical Calculation, Points to Remember

Chapter 20

251—255

ALIGNMENT WITH SOFTWARE PROGRAM

Selected Features of the Programme, Resemblance at Different Levels, Applicable Alignment, Results of Input and Output Programmes, DIALING and CHAOS at GOBICS, Command-Line Version of the Program, Options for the Program Run, Alternative Alignments

INDEX

256—278
