
Contents

1. Introduction	1
The Federal Role in Biotechnology	2
The Promise of Agricultural Biotechnology	5
Gene Sequencing and Mapping	7
Genetics of Rhizosphere Microorganisms	8
Cell Wall Biomass Products	11
Novel Products from Plants	12
Plant Flowering	13
Animal Growth and Development	14
Plant Pests and Diseases	16
Animal Pests and Diseases	18
Opportunities in Environmental Biotechnology	21
Bioremediation: an Overview	23
Fundamental Research Areas	25
Microcosm/Mesocosm Studies	28
Efficacy Testing Methods and Data Evaluation	32
Biosensors: One Promising Assessment Technology	33
Opportunities in Manufacturing/	
Bioprocessing Upstream Processing	34
Bioreactor Design and Cell Culturing Techniques	37
Process Monitoring and Control	41

Bioelectronics and Bionetworks	43
Biomolecular Materials	49
Biomass for Energy Production	52
New and Improved Processes from the Seas	53
Aquaculture	54
Improving Health and Well-Being	56
Improving Quality and Value	57
Understanding And Conserving The Seas	58
Identifying Organisms and Their Niches	59
Marine Ecology	60
Infrastructure Needs	61
Databases and Reference Standards	64
2. Biotechnology in Agricultural Development	65
Introduction	65
Application of Cell Biotechnology	67
Application of DNA Technology	69
Viruses	73
Biotechnology for the Cotton Farmer	
Problems and Prospects	73
Genes	74
Prospects and Potential	78
Biotechnological Tools for Increasing	
Productivity of Pulse Crops	80
Biotechnological Applications for	
the Improvement of Indian Tobacco	82
Biotechnological Approaches to Weed Management	85
Management of Parthenium	
Parthenium HysterophorusL)	
by Marigold (Tagetes PatulaL)	86

Biotechnological Application	88
Bacterial Biotechnology	90
Production of Transgenic Plants	93
3. Plant Breeding versus Plant Genetics	96
Plant Breeding	96
Hybrid Breeding	97
Responses to Biotechnology in Crop Improvement	100
Farming in Environmentally Friendly Systems	103
Risk Assessment of Transgenic Crops	107
Polyploidy in Plants	110
Classification of Polyploids	115
Consequences/implications of Polyploidy	116
Breeding Perennial Grain Crops	123
Perennials to Annuals, and Now Back to Perennials	125
Breeding Perennial Grains: Cool-season Grasses	130
Breeding Perennial Grains: Warm-season Grasses	145
V. Breeding perennial grain legumes: prospects	153
Breeding Perennial Composites: Prospects	155
Establishing Gene Pools	157
Breeding Perennial vs. Annual Grains	159
4. Major Breeding Objectives	163
Rice Research Proposal	163
Resistance to Disease	164
Rice Research Priorities and Areas of Breeding Research ...	165
NCVDevolution of Plant Breeding	167
Technology: Toward an Evolutionary Plant Breeding	168
Participatory Plant Breeding	172
In Conclusion: Using Biodiversity	174

Participatory Breeding and Selection	175
Experimentation for PVS	177
Results Obtained From Participatory Selection in KRIBP ...	179
Participatory Plant Breeding	181
Impact of Farmer Participatory Research on Biodiversity ...	182
Participatory Plant Breeding	185
Seed Selection and Plant Breeding	186
Possibilities of Plant Breeding	197
5. Microbiology in Biotechnology	202
Microbiology in Biotechnology	202
Microbes and Agriculture	203
Microbes And Public Health	204
Microbes In Recovery of Metals	205
Biotechnology in Agriculture :	
The New Green Revolution	205
Protein Synthesis	211
Southern and Northern Blot Techniques	213
Recombinant DNA Technology and Gene Cloning	213
Gene Exchange in Bacteria	215
The Agrobacterium Mediated Transfer of Genes	216
Procedures for Agrobacterium	
Mediated Transformations	219
Direct DNA-Transfer Technologies	220
Antisense RNA Strategy	220
Frost Control Biotechnology	221
Virus Resistance in Transgenic Plants	222
Transformation of Sequences Related to	
Viral Capsid Protein	223
Resistance Conferred by Antisense RNA	225

6. Relation of Bacteria to Agriculture	226
The Silo	226
The Fertility of The Soil	227
Sustainable Agriculture Focus on Issues Facing Farmers and Producers	232
Soil Health	233
Decline of Kansas Soils	233
Nitrogen and Organic Matter	235
Soil Bacteria	239
Analysis of the Soil	240
Western Kansas Cropping Systems	244
Organic Matter Content of Western Kansas Soils	246
Looking to the Future of Kansas Soils	248
Role of Bacteria in Coffee Plantation Ecology	248
Distribution and Functions of Bacteria	250
Environmental Factors	253*
Nutritional Requirements of Bacteria: Macronutrients	257
Specialised Bacterial Cells	258
Most Commonly Encountered Soil Bacteria	259
Conclusion	260
7. Prospects and Limitations of Agricultural Biotechnologies	262
Introductory Remarks	262
Plants and Agriculture	264
Animal Biotechnology	268
Biotechnology in Agriculture	269
Production of Disease Resistant Plants	271
Biotechnology and Indian Agriculture: The Challenge of the Next Millennium	274

The Indian Challenge	274
Biotechnology and India Agriculture	276
Movement in Transgenics	277
Public Concerns	279
Biotechnological Applications Relevance to The Indian Farmer	282
Research and Technology Transfer	282
Commercial Seed Production.....	284
Private Hybrid's Share of Seed Market	286
Future Trends	287
<i>Bibliography</i>	293
<i>Index</i>	295
