<i>Aknowledgements</i>	<i>vii</i>
<i>Preface</i>	<i>xi</i>
Segment 0. Introduction to Biotechnology and Laboratory	1
1. Molecular Biology	
2. Origin of Biotechnology	
3. Chronological history of Biotechnology	
4. Genetic Engineering	
5. Transgenic Plants	
6. Record Making and Keeping	
7. Safety Guidelines.	
8. Safe Handling of Microorganisms	
9. Preparation of Buffers and Solutions	
10. DNA Extraction from Agarose gel	
11. Preparation of Glycerol stocks	
12. Using the Microscope	
13. Diluting Solutions	
14. Streak Plating	
15. Laboratory notes for Microbiological Experiments	
Segment 1. Biophysical Technology and Cell Biology	43
Experiment 1: Preparation of Buffers at Desired pH	
Experiment 2: Preparation of phosphate buffers	
Experiment 3: Qualitative tests of sugars	
Experiment 4: Estimation of sugar by Anthrone method	

- Experiment 5: Qualitative tests for Amino Acids
- Experiment 6: Qualitative tests for Proteins
- Experiment 7: Estimation of protein by Lowry's method
- Experiment 8: Estimation of proteins by Bradford method
- Experiment 9: Estimation of DNA by diphenylamine method
- Experiment 10: Estimation of RNA by Orcinol method
- Experiment 11: Group analysis and Gravimetry
- Experiment 12: Assay of salivary Amylase activity
- Experiment 13: Isolation of Casein and Lactose from Milk

Segment 2. Biochemistry, Bioenergetics and Physiology

79

- Experiment 1: Expressing Concentration of Solutions
- Experiment 2: Determination of Urine Urea Nitrogen
- Experiment 3: Calculating Acid Number of Fats
- Experiment 4: Calculation of Saponification Number and Average Molecular Weight of Triacylglycerols
- Experiment 5: Salting in, Salting Out and Dialysis of Proteins
- Experiment 6: Determination of Serum Albumin by Bromocresol Green Method
- Experiment 7: Determination of Total Cholesterol
- Experiment 8: Determination of Serum Glutamate oxaloacetate transaminase (SGOT)
- Experiment 9: Determination of Serum Glutamic Pyruvate Transaminase (SGPT)
- Experiment 10: Determination of Serum Bilirubin
- Experiment 11: Blood Group Analysis
- Experiment 12: Ouchterlony Double Diffusion Test
- Experiment 13: Determination of Haemoglobin Content by Haemoglobinometer

Segment 3. Biological Techniques and Biotechnology

106

- Experiment 1: Culture of Bacteria on Solid and Liquid Medium
- Experiment 2: Isolation of Bacteria
- Experiment 3: Methods of Sterilization
- Experiment 4: Sterilization of Nutrient Media
- Experiment 5: Preparation of Agar plates
- Experiment 6: Simple Staining

Experiment 7: Gram Staining	
Experiment 8: Negative staining	
Experiment 9: Biochemical Characterization	
Experiment 10: Determination of Bacterial Growth by Turbidimetric method	
Experiment 11: Preparation of Alcohol from Fruit Juice	
Experiment 12: Sterilizing Plant Materials	
Experiment 13: Demonstration of in vitro Morphogenesis and Totipotency of Seedling	
Experiment 14: Effects of Hormone Balance on Explant Growth and Morphogenesis	
Experiment 15: Preparation from Basal Salt Solutions	
Experiment 16: Callus Formation and Multiplication	
Experiment 17: Establishment of Suspension Cultures	
Experiment 18: Anther Culture	
Experiment 19: Culture of Primary Chick Embryo Fibroblasts (CEF)	
Experiment 20: Transfer of Cell Cultures	
Experiment 21: Preservation of Cultured Cells by Freezing	
Experiment 22: Isolation of DNA from Animal tissue	
Experiment 23: Isolation of DNA from Plant Leaves (C-TAB Method)	
Experiment 24: Isolation of High Molecular weight genomic DNA from Bacteria	
Experiment 25: Isolation of plasmid DNA from <i>E. coli</i> bacteria	
Experiment 26: Purification of DNA	
Experiment 27: Quantitative Estimation of DNA by Spectrophotometric method	
Experiment 28: Agarose Gel Electrophoresis (AGE) for Separation of DNA	
Glossary	180
Bibliography	243
Appendices	267
