

CONTENTS

<i>Preface</i>	v
1. Principles of Genetics	1
History, 1	
Gregor Johann Mendel (1822-1884) - Father of Genetics, 4	
Heredity and Variation and its Causes, 6	
Monohybrid Cross and Law (Principles) of Segregation, 6	
Terminology in Genetics, 8	
Dihybrid Cross and Law of Independent Assortment (or)	
Law of Random Assortment, 9	
Modified Mendelian Ratios, 13	
Interaction of Genes/Complementary, 18	
Genetic Versus Environmental Effects, 25	
Multiple Alleles, 27	
Inheritance Related to Sex, 31	
Linkage and Crossing Over, 38	
Sex Determination, 43	
Sex Chromatin, 46	
X Chromosome Inactivation, 47	
Dosage Compensation, 47	
2. Population Genetics	49
Hardy- Weinberg Equilibrium, 55	
Extension of Hardy-Weinberg Law, 61	
Selection, 68	
Metric Characters, 75	
Inbreeding, 77	
Effective Population Size, 79	

Contents/viii

Values and Means, 82	
Population Mean, 83	
Average Effect, 83	
Breeding Value, 85	
Dominance Deviation, 86	
Interaction Deviation, 87	
Components of Variance, 88	
Interaction Variance, 90	
Environmental Variance, 91	
Resemblance Between Relatives, 91	
Heritability, 94	
Repeatability, 102	
Phenotypic, Genetic and Environmental Correlations, 106	
Genotype Environment Correlation and Interaction, 111	
3. Cytoplasmic Inheritance	115
4. Gene Concept – Classical and Molecular (Structure of DNA)	121
5. Mutation	125
6. Mitosis and Meiosis	131
Mitosis, 131	
Meiosis, 133	
7. Structure of Eukaryotic Cell	139
8. Cytogenetics	143
Chromosomal Aberrations, 144	
Preparation of Metaphase Spreads and Karyotyping, 145	
Appendix-1: Ratios and Traits to Remember	151
