

Contents

<i>Preface</i>	v
1. Importance of Plant / Crop Physiology in Agriculture	1
2. Plant Physiology Laboratory	5
2.1 Microscopy	5
2.2 Analytical balance and weighing accuracy	6
2.3 Chemistry and solution dilutions	7
2.4 Protein assay and spectrophotometer use	9
2.5 Standard curves and graphing formats	11
2.6 Preparation of solution	13
2.6.1 Normal solutions	14
2.6.2 Molar solutions	14
2.6.3 Parts per million (ppm) solution	15
3. Osmotic Pressure Potential by Plasmolytic Method	17
3.1 Physiological importance of water	17
3.2 Methods of measuring osmotic potential	19
3.3 Measurement of the water potential of plant tissue by weight method	20
3.4 Tissue water relations	22
3.5 Leaf water, osmotic and turgor potentials and bulk density elastic modules of tissues	22
3.6 Effect of osmotic concentration and temperature on imbibition of water by seed	25
3.7 Chardakov method for water potential measurement	26
3.8 Relative water content (RWC)	29
4. Separation of Plant Pigments by Chemical Method	33
4.1 Estimation of chlorophyll and other chloroplast pigments	34
4.2 Separation of chloroplast pigments by solvent partitioning technique	36

4.3	Paper chromatography separates plant pigments	37
4.3.1	Paper chromatography method.....	38
4.3.2	Identifying pigments isolated by paper chromatography	40
5.	Determination of Stomatal Frequency and Stomatal Index	43
5.1	Measurement of stomatal frequency and stomatal index.....	45
6.	Transpiration.....	47
6.1	Influence of anti transpirant	48
7.	Oxygen Evolution During Photochemical Reaction	51
8.	Measurement of Photosynthetic Rates by Gas Exchange Techniques	55
8.1	Measurement of photosynthetic rate by Infra-red gas analyzer (IRGA)	56
8.1.1	Measurement of photosynthetic rate using a closed IRGA system	59
8.2	Measurement of respiration rate by gas exchange approach	59
8.3	Measurement of respiration rate	60
8.4	Measurement of respiration rate by determining the increase in CO ₂ concentration in a chamber	60
9.	Growth Regulators	63
9.1	Auxins.....	64
9.2	Gibberellins	66
9.3	Cytokinins	69
9.4	Ethylene	70
10.	Seed Physiology	71
10.1	Morphological and physiological changes during seed development:	73
10.2	Biochemical changes during seed development	74
10.3	Morphological and physiological changes during physiological maturity	75
10.4	Seed viability and vigor	76
10.5	Seed dormancy	78
10.5.1	Factors of seed dormancy	78
10.5.2	Breaking of seed dormancy	79
10.6	Methods of testing seed viability and vigor	80
10.7	Mobilization and utilization of seed reserves	82
10.8	Changes during seed germination: morphological, physiological & biochemical	83

11. Tissue Culture Techniques	87
11.1 Demonstration of callus induction in tobacco leaves	91
11.2 Growing plants in tissue culture	92
12. Growth Analysis	97
12.1 Measurement of growth.....	100
13. Hydroponics and Plant Nutrition	107
13.1 Sand Culture.....	116
14. Test for Various Stresses in Crop Plants	121
14.1 Testing for heat tolerance in plants	121
14.2 Desiccation tolerance test for drought resistance	125
14.3 Seed germination test for drought tolerance	126
14.4 Field screening of plant for drought tolerance efficiency	127
14.5 Temperature tolerance in crop plants - Solar energy traps	127
14.6 Chlorophyll stability for drought tolerance in plants	128
15. Analysis for Carbohydrates	131
15.1 Determination of reducing sugars by nelson-somogyi method....	132
15.2 Estimation of reducing sugar by dinitrosalicylic acid method	136
15.3 Determination of total carbohydrate by anthrone method	136
15.4 Phenol sulphuric acid method for total carbohydrate	138
15.5 Estimation of starch by anthrone reagent	139
15.6 Determination of amylose:	140
15.7 Estimation of cellulose	141
15.8 Estimation of hemicellulose:	143
15.9 Determination of fructose and inulin:	144
15.9.1 Inulin	145
15.10 Estimation of pectic substances	145
15.11 Extraction and purification of pectin	147
15.12 Estimation of crude fibre	148
15.13 Estimation of pyruvic acid	149
16. Nitrogen and Protein Analysis	151
16.1 Nitrogen estimation by kjeldahl method	154
16.2. Determination of ammonia nitrogen.....	155
16.2.1 Distillation procedure	155
16.2.2 Colorimetric method	156
16.3 Determination of organic nitrogen	158
16.4 Protein estimation by Lowry's method	158

16.5 Extractable nitrates	160
16.6 Quantitative estimation of total amino acid through ninhydrin	161
17. Analytical Methods for Fats and Fatty Acids.....	165
17.1 Determination of lipid content by ether extraction	168
17.2 Acid-Ether extraction of lipids	169
17.3 Esterification of fatty acids	169
17.4 Lipid extraction	170
17.5 Gas-Liquid chromatography for lipids	170
18. Micronutrient Analysis	173
18.1 Determination of boron	174
18.2 Determination of extractable chloride	176
18.3 Determination of total sulfur	177
18.4 Determination of iron	177
18.5 Determination of molybdenum	180
18.6 Determination of zinc	181
18.7 Determination of manganese	184
19. Determination of Phytochemicals.....	185
19.1 Determination of alkaloids	186
19.2 Determination of total phenols	186
19.3 Determination of flavonoids	186
19.4 Determination of saponins	187
19.5 Determination of riboflavin	187
19.6 Determination of niacin	187
19.7 Determination of ascorbic acid	188
19.8 Alternate method for Ascorbic acid	189
20. Climate Change, Phytotron and Rhizotron	191
20.1 Phytotron	192
20.2 Rhizotron	196
References	201
