Preface

1

1. Biotechnology and Plants

The Science of Modern Plant Biotechnology; Biotech Basics; National Biotechnology Policy-Salient Features; Rising Food Prices; Science and Technology; Resource Alienation and Commodification of Common Resources; Globalisation and the Marginalisation of the Farmer; Our Demands; Biotechnology: Indian Scenario; Vaccines; Medicinal Discovery; Agriculture Sector; Medicinal Research; Clinical Research and Trials; Bioinformatics; Modern biotechnology-Sustainable Growth

18

2. Plant Genetic Engineering

Plant Genetics; Understanding Gene Testing; RNA and DNA Revealed: New Roles, New Rules; RNA Interference (RNAi); Biological Cell; Biological Energy-ADP and ATP; Cell Respiration; Biological Viruses; The Tools of Genetics: Recombinant DNA and Cloning; Discovery of the Hybrid Helix and the First DNA-RNA Hybridization; A New Type of Polymer Chemistry

50

3. Gene Mapping of Plant

Transposition; Amplification And Rearrangement; Genome Contraction; Controlling Transcription, Recombination, And Transposition; Homology-dependent Gene Silencing; The Origin Of Transposons And Methylation; Transposons And Genome Evolution In Plants; The Discovery Of Transposition; Plant Transposons In The Age Of Genomics; The Paradox; Synteny And Divergence

77

4. Plant Cell Structure

History of Plant Cell; Pioneering Pathfinders; A. C. Seward and the Cryptozoon Controversy; Emergence Of A New Field Of Science; Lessons From The Hunt; Crystalline Inclusions within Plant Cells; Eukaryotic Cells and Plant Cell; Anatomy of Plant Cell; Early Evolution and the Origin of Cells; An Appreciation; Solution to Darwin's Dilemma

5. Plant Reproduction	105
Reproduction in Plants; Reproductive Systems and Evolution in Vascular Plants; Modes Of Reproduction; Consequences Of Reproductive Systems; Evolution Of Reproductive Systems; The Cost Of Sex; Plant Reproduction System; Genetic Variations in Plants ; Describing and Observing Phenotypic Variation ; Genetic Diversity; Diagram of a Dicot Plant; Importance of Mode of Reproduction; Self Fertilizing Crops (Autogamous Crops); Selection Methods for the Development of Pure Breeding Cultivars from Crosses; Factors affecting plant reproduction; Conclusions	
6. Transgenic Plants for Recombinant Proteins	149
Legitimate Concerns about Transgenic Agriculture; Misinformation about Food Safety; Some Early Fruits of Transgenic Agriculture; Transgenic Plants for Antibodies ; Transgenic Plants with Beneficial Traits; Production of Polyhydroxybutyrate or PHB	
7. Plant Breeding	192
Introduction; Plant Breeding For A World Community; Speeding-up Plant-breeding Work; Breeding Methods in Crop Plants; Cross Pollinated Crops; Mutation Breeding; Chemical Mutagens; Participatory Plant Breeding; Conventional Breeding; Plant Breeding in the Future	
Bibliography	221
Index	223
