<i>Preface to the First Edition</i>	ix
<i>Acknowledgements</i>	xii

Section 1: Introduction to Cell Biology

1. Organization of Animal Cells and Special Properties	3
1.1 Organization of Mammalian Cells	3
1.2 Comparative Physical Properties of Mammalian and Microbial Cells	11
1.3 Glucose Metabolism in Normal and Tumor Cells	13
1.4 Folding and Secretion of Proteins in Mammalian Cells	16
1.5 Post-translational Modification of Proteins in Mammalian Cells	18
1.6 Summary	21
2. Proliferation and Death of Animal Cells: Molecular Mechanism	23
2.1 Cell Growth	23
2.2 Growth Regulation	29
2.3 Hayflick's Phenomenon	33
2.4 Cell Signaling	35
2.5 Stress-induced Cell Death	39
2.6 Summary	45

Section II: Basic Cell Culture Technology

3. Sources of Animal Cells, Preservation and Control of Cell Lines/Tissues	49
3.1 Sources of Cells	49
3.2 Selection of Cells for Manufacturing Biological	52
3.3 Generation of Cell Banks	55
3.4 Cryopreservation of Animal Cells and Tissues	59
3.5 Summary	63
4. Design of Cell Culture Media	65
4.1 Selection of Cell Culture Medium	65
4.2 Basic Constituents of Media	66

4.3 Other Important Defined Medium Supplements	68
4.4 Serum and Its Role in Animal Cell Culture	69
4.5 Physicochemical Properties of Cell Culture Media	72
4.6 Development of Serum-free Media	74
4.7 Design Approaches to Optimize SFM	77
4.8 Metabolism and Catabolic Control	78
4.9 Media Preparation and Testing	79
4.10 Summary	81
5. Good Manufacturing Practices, Aseptic Techniques, and Cell Culture Equipment	83
5.1 Laboratory Design	83
5.2 Aseptic Process	88
5.3 Biosafety Cabinet	93
5.4 Risk Assessment	98
5.5 Sterile Filtration	99
5.6 Ultra-pure Water for Cell Culture	105
5.7 Basic Equipment	107
5.8 Culture Vessels	109
5.9 Summary	110
6. Environmental Factors and Cell Culture Methods	113
6.1 Animal Cells and the Culture Environment	113
6.2 Environmental Parameters	115
6.3 Suspension Versus Adhered Cell Culture	116
6.4 Adhesion of Cells to Culture Surface	117
6.5 Solid Microcarriers	118
6.6 Hydrodynamic Cell Death	124
6.7 Oxygen Supply in Cell Culture Medium	126
6.8 Types and Operation of Cell Culture Bioreactor	130
6.9 Cell Retention Systems in Perfusion Bioreactor	136
6.10 Summary	140
7. Separation of Viable Cells	143
7.1 Physical Properties	143
7.2 Biological Properties	146
7.3 Summary	153
Section III: Therapeutic Proteins and Bioengineering Aspects	
8. Stable Gene Expression in Mammalian Cells and Monoclonal Antibody	157
8.1 Pathway for Recombinant Protein Production in Mammalian Cells	157
8.2 Selection and Gene Amplification	161
8.3 Monoclonal Antibodies (Mab)	165
8.4 Development of Human Mab	172
8.5 Summary	176

9. Large-scale Animal Cell Culture for the Production of Therapeutic Proteins	179
9.1 Development of Large-scale Animal Cell Culture Process	179
9.2 Animal Cell Culture-based Products and Market Potential	181
9.3 Cell-line Dependent Variation of Product Quality in Large-scale Manufacturing Processes	182
9.4 Production of Monoclonal Antibodies (Mab)	185
9.5 Fluidized-bed Bioreactor	194
9.6 Stirred Tank Bioreactor	197
9.7 Summary	201
10. Scale-Up Studies in Animal Cell Culture Bioreactors	203
10.1 Definition of Scale-up and Biological Constrains	203
10.2 Problems in Cell Culture Process and Corresponding Developments	206
10.3 Density Scale-up Versus Volume Scale-up	206
10.4 Bioreactor Scale-up	209
10.5 Summary	217
Section IV: Advanced Cell Culture Technology	
11. Embryonic and Adult Stem Cells	221
11.1 Beginning of Life	221
11.2 Stem Cells and Classification	226
11.3 Pluripotent Stem Cells: Derivation and Characterization	228
11.4 Adult Stem Cells	240
11.5 Plasticity in Adult Stem Cells	249
11.6 Induced Pluripotent Stem (iPS) Cells	252
11.7 Stem Cell Niche	255
11.8 Summary	259
12. Regenerative Medicine: Tissue Engineering	264
12.1 The Biology of Autonomous Regeneration	264
12.2 Cell and Tissue Therapy in Regenerative Medicine	267
12.3 Tissue Engineering	268
12.4 Bioreactors in Tissue Engineering	282
12.5 Current Approaches in Tissue Engineering	287
12.6 Organ Culture	288
12.7 Bioartificial Organs	294
12.8 Summary	296
13. Regenerative Medicine: Cellular Therapy	300
13.1 Cloning	301
13.2 Gene Therapy	308
13.3 Adult Stem Cells Therapy	318
13.4 Pluripotent Stem Cells Therapy	323
13.5 Summary	325

14. Present Trend and Future Perspective	328
14.1 Shift of Goal in Engineering and Production Technologies	329
14.2 Paradigm Shift in Trend of Future Products	331
Section V: Analytical Techniques and Cell Isolation	
15. Quantitative Analysis	337
15.1 Enumeration of Cell Number	337
15.2 Analysis of Culture Medium	340
15.3 Study of Growth and Metabolic Parameters	342
15.4 Assay of Proteins/Antigens	345
15.5 Plating Efficiency	349
15.6 Cytotoxicity Assay	350
15.7 Summary	354
16. Establishing Primary Cultures and Cryopreservation of Cells/Tissues	356
16.1 Establishing Primary Cultures	356
16.2 Freezing and Reconstituting Cells and Tissues	363
Glossary	367
Index	377
