Preface

xiii

1. Plant biotechnology: A review

1

1.1 Introduction

1

1.2 Applications of biotechnology in agriculture

2

1.3 Biotechnology in agriculture – benefits and risks

3

1.4 Safety and regulations

4

1.5 Plant biotechnology

5

1.6 Plant biotechnology helps quest for sustainability

7

1.7 Role of plant biotechnology in agriculture

8

1.8 Role of plant biotechnology in horticulture

9

1.9 Role of plant biotechnology in medicines

9

1.10 Impact of plant biotechnology in crop improvement

10

1.11 Impact of plant biotechnology on forestry

10

2. Plant cell culture and development

11

2.1 Introduction

11

2.2 Concept of totipotency

11

2.3 Cell-cell interactions

15

2.4 Cytodifferentiation

17

2.5 Plant morphogenesis

20

2.6 Plant growth hormones

23

2.7 Hardening of acclimatisation

36

3. Plant tissue culture

39

3.1 Introduction

39

3.2 Basics of plant cell and tissue culture

40

3.3 Tissue culture in agriculture

41

3.4 Germplasm conservation

41

3.5 Embryo culture

42

3.6 Genetic transformation

43

vi Plant biotechnology

3.7	Protoplast fusion	43
3.8	Haploid production	44
3.9	Current and future status of plant tissue culture	45
3.10	Techniques of plant tissue culture	45
3.11	Tissue culture in pharmaceuticals	47
3.12	Hairy root cultures	49
3.13	Aseptic technique	52
4.	Micropropagation	57
4.1	Introduction	57
4.2	Methods of micropropagation	57
4.3	Important aspects of commercial micropropagation	61
4.4	Micropropagation: The most commercially exploited tool of plant biotechnology	63
4.5	Factors affecting micropropagation	66
4.6	Advantages of micropropagation	73
4.7	Cost-effectiveness in micropropagation	73
4.8	Physical states of the culture medium	74
4.9	Hyperhydricity or vitrification	75
4.10	Mass propagation of plants through bioreactors	76
4.11	Bioreactor: Basic configuration of culture vessel	78
4.12	Types of bioreactors used for micropropagation	79
4.13	Advantages and disadvantages of the use of bioreactors for micropropagation	81
4.14	Automation in micropropagation	83
5.	Germplasm storage	85
5.1	Introduction	85
5.2	Plant biotechnology and germplasm conservation	85
5.3	Applications of germplasm	94
5.4	Molecular conservation technologies	96
5.5	Randomly amplified polymorphic DNA markers	100
6.	Haploid plants	103
6.1	Introduction	103
6.2	Androgenesis	104
6.3	Gynogenesis haploid	109

6.4	General gynogenesis procedures	111
6.5	Ovary and ovule culture	112
6.6	Doubled haploids	114
6.7	Applications of DHs plant breeding	115
6.8	Advantages and disadvantages of DHs	118
6.9	Androgenic haploids	118
7.	Triploid plants	131
7.1	Introduction	131
7.2	Role of polyploidy in plant evolution	132
7.3	Formation of triploid plants	137
7.4	Characteristics and application of triploid plants	137
7.5	Ways to produce triploid plants	140
8.	<i>In vitro</i> pollination and fertilisation	147
8.1	Introduction	147
8.2	Types of pollination	149
8.3	Plant fertilisation	154
8.4	Life cycle of plants	158
8.5	Collection of pollen, starch and phytoliths	160
9.	Protoplast isolation and culture	163
9.1	Introduction	163
9.2	Isolation of protoplasts	164
9.3	Importance of protoplasts and their cultures	164
9.4	Methods of isolation of protoplasts	166
9.5	Applications of protoplast in plant tissue	173
10.	Somatic cell hybridisation	177
10.1	Introduction	177
10.2	Protoplast fusion and somatic hybridisation	177
10.3	Aspects of somatic hybridisation	179
10.4	Applications of somatic hybridisation	182
10.5	Asymmetric somatic plant hybridisation	183
11.	Synthetic seeds	191
11.1	Introduction	191
11.2	Seed technology	192

11.3	Limitations of synthetic seeds	198
11.4	Production and applications of artificial seeds	201
12.	Plant breeding	209
12.1	Introduction	209
12.2	Objectives or aims of plant breeding	211
12.3	Need of plant breeding	211
12.4	Achievements of modern plant breeders	215
12.5	Green revolution	216
12.6	Domestication	216
12.7	Plant breeding methods or techniques	220
12.8	Various steps required for developing new varieties	221
13	Plant derived vaccines	227
13.1	Introduction	227
13.2	Characteristics of plant derived vaccines	227
13.3	Challenges in developing PDV	234
13.4	Nonscientific challenges in developing PDV	237
13.5	Regulatory issues	237
14.	Genetically modified foods	239
14.1	Introduction	239
14.2	Advantages of GM foods	239
14.3	Criticisms against GM foods	241
14.4	Regulation of GM foods and role of government	243
14.5	Labelling of GM foods	245
14.6	Most common genetically modified foods	247
14.7	Pros and Cons of genetically modified foods	249
15.	Improving photosynthesis and crop yield	251
15.1	Introduction	251
15.2	Interception of solar radiation	253
15.3	Net photosynthesis in crop plants	255
16.	Insect resistant plants	263
16.1	Introduction	263
16.2	Insecticidal proteins of <i>Bacillus thuringiensis</i>	264

17. Fungus resistant plants	279
17.1 Introduction	279
17.2 Transgenics with antifungal molecules	281
17.3 Transgenics engineered for protein	290
18. Virus resistant plants	297
18.1 Introduction	297
18.2 Transgenics with pathogen-derived resistance	298
19. Plant biotechnology in ornamental plant	317
19.1 Introduction	317
19.2 Classification of ornamental plants	317
19.3 Uses of biotechnology in ornamental horticulture	320
19.4 Major genetically modified ornamental plants	322
20. Modification of flower colour using genetic engineering	327
20.1 Introduction	327
20.2 Transformation of ornamental species	328
20.3 Flavonoid pathway	330
20.4 Genetic modification of the pathway	332
21. Biotechnology in production of medicinal plants	347
21.1 Introduction	347
21.2 <i>In vitro</i> plant regeneration and micropropagation	348
21.3 <i>In vitro</i> regeneration	352
21.4 Genetic transformation	354
22. Recombinant DNA	357
22.1 Introduction	357
22.2 Creating recombinant DNA	359
22.3 Tools and techniques of recombinant DNA technology	362
22.4 Gene cloning	363
22.5 Cloning vectors	367
22.6 Vectors for plant regeneration	371
22.7 T-DNA border sequences	374
22.8 Agrobacterium as a vector system	374
22.9 Monitoring plant diversity through DNA	379
22.10 Types of biodiversity	380

22.11	Consequences of threatened ecosystem	384
22.12	Sustainable use of plant diversity	384
22.13	Monitoring DNA-diversity	385
22.14	DNA markers	385
23.	Molecular markers in plant biotechnology	387
23.1	Introduction	387
23.2	Biochemical marker - allozymes (isozyme)	388
23.3	Molecular markers	389
23.4	Restriction fragment length polymorphism	391
23.5	Random amplified polymorphic DNA (RAPD)	392
23.6	Amplified fragment length polymorphism	394
23.7	Minisatellites, variable number of tandem repeats (VNTR)	397
23.8	Polymerase chain reaction (PCR)-sequencing	398
23.9	Microsatellites or simple sequence repeat (SSR)	400
23.10	Inter simple sequence repeats (ISSR)	402
23.11	Single-strand conformation polymorphism (SSCP)	403
23.12	Cleaved amplified polymorphic sequence (CAPS)	404
23.13	Sequence characterised amplified region (SCAR)	405
23.14	Single nucleotide polymorphism (SNP)	405
24.	Plant biotechnology and climate change	413
24.1	Introduction	413
24.2	Plant biotechnology	413
24.3	Biotechnology for climate change mitigation	415
24.4	Biotechnology for crop adaptation	417
24.5	Impact of cotton production on climate change	422
24.6	Agriculture value chain as a source of greenhouse gas emissions	427
24.7	Mitigation of cotton value chain emissions	429
24.8	Market incentives to reduce cotton value chain emissions	430
24.9	Agronomy of cotton	432
24.10	Climate change and its impact on cotton yield by various countries	438
24.11	Options to adapt to climate change	451
24.12	Challenges and futures perspectives	452

25. Nanotechnology for micronutrients in soil-plant systems	455
25.1 Introduction	455
25.2 Importance of micronutrients in crops	456
25.3 Soil micronutrient deficiency	459
25.4 Dynamics of MNs in soil-plant systems	461
25.5 Novel technologies for fertiliser micronutrients	463
25.6 Nanoencapsulated micronutrients	464
26. Nanotechnology in plants	477
26.1 Introduction	477
26.2 Effects of nanoparticles on plant growth and development	478
27. Intellectual property rights	499
27.1 Introduction	499
27.2 Patents on biotechnological inventions	499
27.3 Forms of IPRs	500
27.4 Crop biosecurity	502
27.5 IPR and developing countries	504
27.6 Biopiracy: A threat to crop biosecurity	506
27.7 Threat of bioterrorism to agricultural crop biosecurity	509
27.8 Future of IPRs and biotechnology and crop biosecurity	511
27.9 Challenges of IPRs in crop biosecurity	512
References	515
Index	517
