<i>Preface</i>	v
<i>Biography of Author</i>	vii
<i>Acknowledgments</i>	ix
Chapter 1 Introduction to Molecular Machines	1
1.1 Preliminary Aspects of a Conventional Machine	1
1.2 Miniaturization of Machines	7
1.3 Molecular Machine	10
1.4 Terminology in Molecular Machines	12
1.5 Bio-inspired Concepts in the Development of Molecular Machines	14
1.6 Energetics and States of Molecular Machines	18
1.7 Biological Molecular Machines	23
References	28
Chapter 2 Operational Aspects of Molecular Machines	31
2.1 Background	31
2.2 Structural Equilibration	33
2.3 Molecular Machine Design	40
2.3.1 Structural changes	40
2.3.2 Design of rotors	41
2.3.3 Design based on conformations	43
2.3.3.1 Molecular brake	45
2.3.3.2 Molecular bevel gear	47
2.3.3.3 Molecular rotating wheel	49

	2.3.3.4	Molecular tweezers	50
	2.3.3.5	Rotors	51
	2.3.3.6	Molecular gyroscopes	56
	2.3.3.7	Double decker	59
	2.3.3.8	Internal rotations	62
	2.3.3.9	Competitive ion binding	64
	2.3.3.10	Modulation by hydrogen bonds	67
	2.3.3.11	Charge-transfer	71
	2.3.3.12	Nano-car	73
	2.3.3.13	Molecules walking	73
	References		75
Chapter 3	Interlocked Systems as Molecular Machines		79
	3.1	Principles for Formation of Interlocked Molecules	79
	3.2	Catenanes	82
	3.3	Rotaxanes	87
	3.4	Thermodynamics of Interlocked Systems	89
	3.5	Shuttling Motion in Rotaxanes	94
	3.6	Switching in Rotaxanes	96
	3.7	Knots	114
	3.8	Controllable Properties in Rotaxanes Relating to Molecular Machines	117
	3.9	Molecular Machine for Peptide Synthesis	118
	3.10	A Molecular Elevator	120
	3.11	Logic Gate Based on Rotaxane	122
	References		123
Chapter 4	Photochemically and Electrochemically Guided Molecular Machines		127
	4.1	Principles of Photochemical Switching	127
		4.1.1 Movement of cyclodextrin by photoisomerisation of rotaxane	130
		4.1.2 Photochemically guided keto-enol forms	131
		4.1.3 Utility of photoreduction in switching	132
		4.1.4 Role of external photosensitisers	135
		4.1.5 Photochemically driven molecular shuttle	137

4.1.6	Light driven conformation adjustments	139
4.1.7	Fluorescence modulations	140
4.1.8	Light-powered molecular pedal	143
4.1.9	Helical deformation in photosensitive liquid crystalline materials	144
4.2	Electrochemically Driven Machines	145
4.2.1	Rotations by redox couple	145
4.2.2	Machine action due to radicals	147
	References	149
Chapter 5	Artificial Molecular Machine Based on DNA	153
5.1	Principles	153
5.2	DNA Tweezers	153
5.3	DNA Walker	155
5.4	DNA Based Molecular Gear	156
5.5	pH Dependent DNA Nano-machine	157
5.6	Molecular Assembler	158
5.7	Trends of Study	159
	References	160
