<i>Preface</i>	v
1. Preliminaries	1
1.1 Boolean Functions	1
1.2 Computational Complexity	5
1.2.1 Big O Notation	5
1.2.2 Complexity Classes	6
1.2.3 Completeness	7
1.3 Satisfiability Problem	9
1.4 Integer Linear Programming	11
1.5 Graphs	13
1.6 Additional Remarks and Bibliographical Notes	16
2. Boolean Networks	17
2.1 Definition of Boolean Network	17
2.2 Attractors	20
2.3 Robustness against Perturbation	22
2.4 Asynchronous Boolean Networks	25
2.5 Additional Remarks and Bibliographical Notes	28
3. Detection of Attractors	29
3.1 Problem Definitions	29
3.2 NP-hardness of Singleton Attractor Detection	30
3.3 Reduction to SAT	32
3.4 Reduction to Integer Linear Programming	34
3.5 Utilization of Feedback Vertex Sets	36

3.6	Recursive Algorithms for Enumeration of Attractors . . .	38
3.6.1	Recursive Algorithm for Singleton Attractors . . .	38
3.6.2	Recursive Algorithm for Periodic Attractors . . .	40
3.7	Additional Remarks and Bibliographical Notes	41
4.	Detection of Singleton Attractors	43
4.1	Singleton Attractor Detection for AND/OR BNs	43
4.2	Singleton Attractor Detection for nc-BNs	48
4.2.1	Satisfiability for Nested Canalyzing Functions . .	49
4.2.2	Singleton Attractor Detection for nc-BNs	53
4.3	Attractor Detection for nc-BNs with Bounded Treewidth .	56
4.4	Additional Remarks and Bibliographical Notes	62
5.	Detection of Periodic Attractors	63
5.1	Reduction to Singleton Attractor Detection	63
5.2	2-Periodic Attractor Detection for AND/OR BNs	66
5.3	Periodic Attractor Detection for nc-BNs	73
5.4	Additional Remarks and Bibliographical Notes	77
6.	Identification of Boolean Networks	79
6.1	Identification from Samples	79
6.1.1	Problem Definition	79
6.1.2	Sample Complexity	80
6.1.3	Computational Complexity	83
6.2	Inference from Attractors	88
6.2.1	Problem Definitions	88
6.2.2	Algorithms for Inference from Attractors	89
6.2.3	Network Completion Problems for AND/OR BNs	96
6.3	Additional Remarks and Bibliographical Notes	98
7.	Control of Boolean Networks	99
7.1	Basic Control Problem	99
7.1.1	Problem Definition	99
7.1.2	Dynamic Programming Algorithm	101
7.1.3	NP-hardness	105
7.1.4	ILP-based Method for BN Control	106
7.2	Minimum Driver Sets	107
7.2.1	Problem Definition and NP-hardness	107

7.2.2	ILP-based Method for Minimum Driver Set	110
7.3	Control of Attractors	111
7.4	Additional Remarks and Bibliographical Notes	117
8.	Predecessor and Observability Problems	119
8.1	Predecessor Detection	119
8.2	Observation of Attractors	125
8.2.1	Observation of Singleton Attractors	125
8.2.2	Observation of Singleton and Periodic Attractors	131
8.2.3	Relation with Feedback Vertex Sets	133
8.3	Additional Remarks and Bibliographical Notes	135
9.	Semi-Tensor Product Approach	137
9.1	Semi-Tensor Product of Matrices	137
9.2	Matrix Representation of Boolean Functions	139
9.3	Matrix Representation of Boolean Networks	140
9.4	Number of Attractors	143
9.5	Controllability and Observability	145
9.6	Additional Remarks and Bibliographical Notes	149
10.	Analysis of Metabolic Networks	151
10.1	Boolean Model and Reaction Cut	151
10.2	Hardness of Reaction Cut	153
10.3	Algorithms for Reaction Cut	156
10.4	ILP-based Method for Reaction Cut	159
10.5	Additional Remarks and Bibliographical Notes	161
11.	Probabilistic Boolean Networks	163
11.1	Definition of PBN	163
11.2	Steady State Distributions	166
11.3	Influences of Nodes in a PBN	169
11.4	Additional Remarks and Bibliographical Notes	171
12.	Identification of Probabilistic Boolean Networks	173
12.1	Inference of a PBN by Coefficient of Determination	173
12.2	Identification of a Noisy Boolean Network	174
12.3	Identification of the Structure of a PBN	177
12.3.1	Two Models	177

12.3.2	Identification of an AND/OR PBN	181
12.3.3	Identification of a PBTN	184
12.3.4	Sample Complexity for Identification of a PBN	189
12.4	Additional Remarks and Bibliographical Notes	191
13.	Control of Probabilistic Boolean Networks	193
13.1	Problem Definition	193
13.2	Dynamic Programming Algorithm for PBN Control	196
13.3	Hardness of PBN Control	197
13.4	Additional Remarks and Bibliographical Notes	199
	<i>Bibliography</i>	201
	<i>Index</i>	213
