<i>Acknowledgments</i>	xiii
<i>Preface</i>	xv
1. Introduction	1
<i>Bradley Layton and Kayla Nagle</i>	
1.1 Brief Overview of Numbers and Scales	1
1.1.1 Number of Cells on the Planet and in Organisms	1
1.1.2 Number of Cell Phenotypes in an Organism	3
1.1.3 Number of Atoms in a Cell	3
1.1.4 Number and Organization of Molecules in a Cell	4
1.1.5 Mechanical Components of a Cell	5
1.2 History of Cell Mechanics	10
1.2.1 Early Experiments on Measuring Tissue Constitutive Properties	10
1.2.2 ECM Mechanics versus Cell Mechanics	11
1.2.3 First Experiments and Motivation for Measuring Cell Stiffness	11
1.3 Outline of the Book	12
2. Mechanics of Single Molecules and Single Proteins	15
<i>Alan Hunt, Blake Charlebois, and Seth McCubbin</i>	
2.1 Macromolecules, Small Molecules, and Machines: How Are They Alike? How Do They Differ?	15
2.1.1 Macroscale vs. Microscale	16
2.1.2 Macromolecules Behave Like Macroscale Machines	16

2.2	Thermal Energy, Equipartition, and the Boltzmann Distribution	18
2.2.1	Thermal Energy and Thermal Forces	18
2.2.2	The Equipartition Theorem	21
2.2.3	The Boltzmann Distribution	24
2.3	Thermal Ratchets: What Are They?	
	A Practical Definition	27
2.3.1	Maxwell's Demon	30
2.4	Detailed Balance	31
2.5	Entropy and Enthalpy	35
2.6	Two Ways to Model a Chemomechanical Transition: Macromechanical View versus Statistical Mechanics View—When Do They Apply?	39
2.6.1	An Alternative View: Statistical Mechanics	41
2.7	Conclusions	43
3.	Nucleus Mechanics	45
	<i>Kris Noel Dahl and Markus J. Buehler</i>	
3.1	DNA	45
3.1.1	DNA Structure	45
3.1.2	DNA Mechanics	47
3.1.3	DNA Assembly into Chromatin	49
3.1.4	Mechanics of the Nuclear Interior	50
3.2	Lamins	52
3.2.1	Lamin Protein Structure	52
3.2.2	Filament Assembly and Network Properties	53
3.2.3	Other Nucleoskeletal Proteins	54
3.2.4	Actin	55
3.2.5	Nucleoskeleton Mechanics	55
3.3	Whole Nucleus Properties	58
3.3.1	Whole Nucleus Mechanics	58

4. Nanoscale Imaging and Modeling	61
<i>Bradley E. Layton, M. Brent Boyd, and Kathleen B. Allen</i>	
4.1 The Structures of Entropy Partitioning	61
4.1.1 Collagen	62
4.1.2 Cellular "Safety Factor"	64
4.1.3 Tubulin and Actin	65
4.1.4 Cell Membranes	67
4.2 Atomic Force Microscopy	70
4.2.1 Air Tapping	74
4.2.2 Contact Mode	75
4.2.3 AFM of DOPC-DOPS Liposomes	76
4.3 Further Considerations	78
4.3.1 Imaging the Engines of Life	78
5. Cell-Substrate Interactions	83
<i>Rebecca Lownes Urbano and Alisa Morss Clyne</i>	
5.1 Introduction	83
5.2 Effect of Substrate Stiffness and Matrix Ligand on Cell Morphology	86
5.3 Morphology: Integration of Biochemical and Biophysical Factors	87
5.4 Effect of Substrate Stiffness and Matrix Ligand on Cell Motility	88
5.5 Motility: Integration of Biochemical and Biophysical Factors	90
5.6 Effect of Substrate Stiffness and Matrix Ligand on Cell Mechanics	91
5.7 Cell Mechanics: Integration of Biochemical and Biophysical Factors	93
5.8 Changes in Substrate Stiffness in Disease	94
5.9 Cell-Substrate Mechanics: Conclusions	97
6. Axonal Transport and Neuromechanics	99
<i>Sameer B. Shah, Joshua Chetta, and Brian G. Bober</i>	
6.1 Introduction	99

6.2	Structural Organization within the Neuron	101
6.2.1	Microtubules, Kinesin, and Dynein	102
6.2.2	Actin and Myosin	104
6.2.3	Neurofilaments	105
6.2.4	Cytoskeletal Connectivity within the Axon	107
6.3	Axonal Transport of the Cytoskeleton	108
6.3.1	Fast vs. Slow Transport	108
6.3.2	Microtubule Transport	109
6.3.3	Actin Transport	111
6.3.4	Neurofilament Transport	113
6.3.5	Mechanical Determinants of Transport	114
6.3.6	Inherent Motor Capabilities	115
6.3.7	Motor Configurations on a Cargo	116
6.3.8	Influences of the Cellular Environment	117
6.4	Neuromechanics	118
6.4.1	Tensile Loading during Normal Axonal Outgrowth	118
6.4.2	Imposed Tensile Loading	120
6.4.3	Compressive and Shear Loading	124
6.5	Summary and Outlook	125
7.	Implications for Disease: Valvular Fibrosis and the Myofibroblast	127
	<i>Mark C. Blaser and Craig A. Simmons</i>	
7.1	Introduction	127
7.1.1	Fibrosis: A Disease Rooted in Mechanics	127
7.1.2	The Aortic Valve	130
7.1.3	Aortic Valve Disease	133
7.2	The Myofibroblast	135
7.2.1	Role in Disease and Repair	135
7.2.2	Identification and Cellular Characteristics	136
7.2.3	TGF- β 1-Mediated Mechanical Control of Myofibroblast Differentiation	137

7.2.4 Mechanical Control of Myofibroblast Differentiation Independent of TGF- β 1	141
7.3 Mechanical Regulation of Valvular Fibrosis	144
7.3.1 Substrate Stiffness and Cyclic Stretch	144
7.3.2 The Role of TGF- β 1 in Aortic Valve Disease	147
7.4 Conclusions	150
