

CONTENTS

Preface	vii
About the Editors	xxv
About the Contributors	xxix
 1. Bioinspired Fabrication of Nanostructures from Tissue Slices	 1
<i>Kyle Alberti and Qiaobing Xu</i>	
1. Introduction	1
2. Tissue Processing and Skiving	3
2.1. Decellularizing	3
2.2. Sectioning tools	4
3. Applications	6
3.1. Template for nanofabrication	6
3.1.1. Metallic nanostructures by staining-and-etching	6
3.1.2. Replica molding	7
3.2. Stacking and rolling for tissue engineering	9
3.2.1. Two-dimensional scaffolds	9
3.2.2. Three-dimensional tubular scaffolds	12
4. Conclusions and Outlook	13
4.1. Future perspective	13
4.2. Conclusion	15
Acknowledgments	15
References	15
 2. Bioinspired Artificial Muscles Based on Dielectric Elastomers	 17
<i>Federico Carpi</i>	
1. Introduction	17
2. Dielectric Elastomer Artificial Muscles	19

3. Example of Application: Bioinspired Tunable Lenses	22
4. Conclusions and Outlook	28
Acknowledgments	29
References	29
 3. Bioinspired Engineering of Multifunctional Devices	31
<i>Ryan M. Pearson, Ja Hye Myung and Seungpyo Hong</i>	
1. Introduction	31
2. Physiological Phenomena	33
2.1. Recognition-multivalent binding	33
2.1.1. Extracellular multivalent binding events	34
2.1.2. Intracellular multivalent binding events	35
2.2. Molecular self-assembly	35
2.3. Stimuli-responsive processes	36
2.4. Transfer of genetic materials	37
2.5. Tissue regeneration/wound healing	38
2.6. Natural surface architecture and adhesiveness	39
3. Synthetic and Natural Biomedical Polymers Used for Biomimicry Applications	41
4. Nature-Inspired Engineering	43
4.1. Biomedical engineering for drug/gene delivery	43
4.1.1. Multivalent binding-based cell targeting, therapy and gene delivery for cancer	43
4.1.1.1. Cancer cell targeting through multivalent binding	43
4.1.1.2. Delivery of anticancer therapeutics using multivalent dendrimers	44
4.1.1.3. Anticancer gene delivery using multivalent dendrimers	45
4.1.2. Drug delivery systems using self-assembly	45
4.1.2.1. Micelles and liposomes	45
4.1.2.2. Supramolecules and nanoparticles	47
4.1.3. Drug delivery system using environmentally responsive materials	48
4.2. Engineering strategies for diagnostics	49
4.2.1. Multivalent binding-based diagnostics	50
4.2.2. Self-assembly-based diagnostics	50

4.2.3. Stimuli-responsive materials for diagnostics	52
4.2.4. Biomimetic surface for diagnostics	52
4.3. Engineering strategies for tissue regeneration	53
4.4. Engineering strategies for biomimetic surfaces	54
4.4.1. Self-cleaning surfaces	54
4.4.2. Bioinspired optical devices with antireflection	54
4.4.3. Gecko-inspired adhesives	56
5. Conclusions	57
References	57
4. Bioinspired Self-Cleaning Antireflection Coatings	65

Khalid Askar, Blayne M. Phillips, Bin Jiang and Peng Jiang

1. Introduction	65
1.1. Antireflection coatings	65
1.1.1. Traditional quarter-wavelength and multilayer antireflection coatings	66
1.1.2. Bioinspired broadband moth-eye antireflection coatings	67
1.2. Bioinspired self-cleaning coatings	68
1.3. Overview of the chapter	69
2. Wafer-Scale Bottom-Up Self-Assembly of Colloidal Microspheres	69
2.1. Spin-coating-based colloidal self-assembly	70
2.2. Colloidal self-assembly at air/water interface	75
3. Templating Nanofabrication of Moth-Eye ARCs on Semiconductors	76
3.1. Templated moth-eye ARCs on crystalline silicon wafers	77
3.1.1. Moth-eye ARCs on single-crystalline silicon wafers	78
3.1.2. Moth-eye ARCs on multicrystalline silicon wafers	82
3.2. Templated moth-eye ARCs on other semiconductor wafers	83
3.2.1. Moth-eye ARCs on GaSb wafers	83
3.2.2. Moth-eye ARCs on GaAs wafers	84
4. Templating Nanofabrication of Moth-Eye ARCs on Glass	86

4.1.	Soft-lithography-based fabrication of polymer moth-eye ARCs	86
4.2.	Templated fabrication of sol-gel glass moth-eye ARCs	88
5.	Self-Cleaning Moth-Eye ARCs with Superhydrophobic Surfaces	88
6.	Conclusions and Outlook	90
	Acknowledgments	91
	References	91
5.	Anisotropic Biomimetic Particle Delivery Systems	97
	<i>Stephen C. Balmert and Steven R. Little</i>	
1.	Introduction	97
2.	Soluble Factor Delivery from Anisotropic Multi-Compartment Particles	98
2.1.	Particle fusion	99
2.2.	Core-Shell and Janus particles by electrohydrodynamic co-jetting	101
2.3.	Layer-by-layer assembly of polyelectrolyte multilayer particles	102
3.	Anisotropic Ligand Presentation on Particle Surfaces	103
3.1.	Limitations of isotropic ligand presentation (Example Case: aAPCs)	103
3.2.	Statically anisotropic surface-presentation of ligands on particles	104
3.2.1.	Anisotropic surface patterning by macromolecular self-assembly	104
3.2.2.	Regional surface anisotropy by electrohydrodynamic co-jetting	106
3.2.3.	Colloidal approaches to patchy surface anisotropy on particles	106
3.3.	Dynamically anisotropic surface-presentation of ligands on particles	107
3.3.1.	Dynamically anisotropic ligand presentation on liposomes	109
3.3.2.	Dynamically anisotropic ligand presentation on supported lipid bilayers	109
4.	Delivery with Anisotropic Particle Shapes	110
4.1.	Effects of shape anisotropy on particle uptake by cells	111

4.2.	Effects of shape anisotropy on particle distribution in the body	113
4.2.1.	Extended circulation with erythrocyte-shaped particles	113
4.2.2.	Extended circulation with filament-shaped particles	114
4.3.	Anisotropic shape-shifting particles	114
5.	Conclusions and Outlook	115
	Acknowledgments	115
	References	116
6.	Biomimetic Approaches to Peripheral Neuroprosthetic Interfaces	121
	<i>Shawn M. Dirk, Patrick Lin, Stephen Buerger, Kirsten N. Cicotte, Gregory P. Reece and Elizabeth Hedberg-Dirk</i>	
1.	Introduction	122
2.	Materials	123
2.1.	Hard materials	123
2.2.	Soft materials	125
2.2.1.	Recent use of soft materials	125
2.2.2.	Tissue engineering approaches	128
3.	Interface Fabrication	131
3.1.	Micromachining and microfabrication	132
3.2.	Direct writing or 3D printing	137
3.3.	Electrode coatings	137
3.3.1.	Electrospun fiber electrode coatings	137
3.3.2.	Layer-by-layer assembly	141
3.3.3.	Electropolymerization	141
4.	Surgical Techniques	142
4.1.	Animal model	143
4.2.	Surgical site and choice of nerve	143
4.3.	Microsurgical techniques for electrode attachment	144
5.	Conclusions and Outlook	146
	Acknowledgments	146
	References	146
7.	Biomimetic Superhydrophobic Surfaces	153
	<i>Mariana B. Oliveira and João F. Mano</i>	
1.	Superhydrophobic Surfaces	153
2.	Principles Explaining Superhydrophobicity	154

3.	Superhydrophobic Surfaces in Nature: A Brief Correlation Analysis between Topography/Chemical Features and Surface Properties	155
3.1.	Lotus leaf	155
3.2.	Bird wings	157
3.3.	Rose petal	157
3.4.	Spider web	157
3.5.	Anisotropic surfaces in nature	158
4.	Preparation of Synthetic Superhydrophobic Surfaces	158
5.	Effect of Multiscale/Hierarchical Roughness on Superhydrophobic Surfaces	159
6.	Development of Superhydrophobic Surfaces: Some Examples	160
6.1.	One-step processing superhydrophobic surfaces	160
6.2.	Two-step processing superhydrophobic surfaces	161
7.	Application of Superhydrophobic Surfaces in the Biomedical Field	163
7.1.	Applications as biomaterials	163
7.1.1.	Cell-superhydrophobic surfaces interactions	163
7.1.1.1.	Interactions of eukaryotic cells: As implantable biomaterials	163
7.1.1.2.	Interactions with bacteria	164
7.1.1.3.	Interactions with blood: As vascular grafts	165
7.2.	Superhydrophobic surfaces as platforms for the fabrication of biomaterials spheres	165
7.3.	Exploiting the wettability contrast for the design of microfluidic sensors and reactors	166
8.	Superhydrophobic Surfaces as Devices for High-Throughput Analysis in the Tissue Engineering and Regenerative Medicine Field	168
8.1.	State of the art: High-throughput analysis techniques to be used in tissue engineering and regenerative medicine approaches	168
8.2.	Superhydrophobic surfaces in high-throughput analysis strategies applicable in tissue engineering and regenerative medicine	172
8.2.1.	For 2D strategies	173
8.2.2.	For 3D strategies	175

9. Conclusions	177
References	178
8. Clinical Applications of Bioinspired Artificial Dermis	181
<i>Katsuya Kawai, Naoki Morimoto and Shigehiko Suzuki</i>	
1. Introduction	181
2. Preparation of Artificial Dermis	182
3. Features of Artificial Dermis	182
3.1. Structure of the artificial dermis	182
3.2. Mechanism of wound healing using the artificial dermis	183
3.3. Clinical use	183
3.4. Scanning electron microscopic findings of the dermis-like tissue	184
3.5. Intended use	186
3.6. Special usage of the artificial dermis	186
3.6.1. Usage for skin defect after malignant tumor removal	186
4. Clinical Application of Artificial Dermis	186
4.1. Case 1. Third-degree burn	186
4.2. Case 2. Skin defect after release of scar contracture	186
4.3. Case 3. Skin defect after giant nevus removal	187
4.4. Case 4. Skin defect after malignant tumor removal	187
5. Advantages and Disadvantages of Artificial Dermis	189
5.1. Advantages of treatment with the artificial dermis	189
5.2. Clinical problems using the artificial dermis	189
6. Combination Therapy of Artificial Dermis and bFGF	190
6.1. Biological activities of bFGF	190
6.2. Animal examinations	190
7. Clinical Cases of Combination Therapy of Artificial Dermis and bFGF	191
7.1. Case 5. Diabetic ulcer	191
7.2. Case 6. Decubitus ulcer	192
7.3. Microcirculation in artificial dermis	192
8. Conclusions and Outlook	192
Acknowledgment	194
References	194

9.	Contributions of Collagen and Elastin to Mechanobiology of Arteries	197
	<i>Yanhang Zhang and Ming-Jay Chow</i>	
1.	Introduction	197
2.	Structural and Biomechanical Changes in Elastin	
	Degraded Aorta	200
	2.1. Microstructural changes	201
	2.2. Progressive mechanical property changes due to elastin degradation	205
3.	Structural and Functional Changes of Pulmonary Arteries (PAs) Due to Pressure Gradient	208
	3.1. <i>In vivo</i> vascular remodeling	209
	3.2. Changes in mechanical properties	209
4.	Conclusions	213
	Acknowledgments	213
	References	214
10.	DNA Inspired Self-Assembled Metal Arrays	217
	<i>Yusuke Takezawa and Mitsuhiro Shionoya</i>	
1.	Introduction	217
2.	DNA-Templated Metal Arrays	219
3.	Incorporation of a Metal-Mediated Base Pair into DNA Duplexes	223
4.	Multiple Incorporation of Metal-Mediated Base Pairs into DNA Duplexes	229
5.	Homologous Metal Arrays Inside DNA Duplexes	229
6.	Heterologous Metal Arrays Inside DNA Duplexes	233
7.	Metal Arrays Inside DNA Other Structures and DNA Analogues	236
8.	Application of DNA-Templated Metal Arrays	241
9.	Conclusions and Outlook	242
	Acknowledgments	243
	References	243
11.	Jellyfish Inspired Hybrid Hyrogels	247
	<i>Huiliang Wang</i>	
1.	Introduction	247
2.	Jellyfish Mesogloea: Microstructure and Properties	250
	2.1. Anisotropic microstructure	251

2.2.	Unique anisotropic swelling properties	252
2.3.	Mechanical properties	255
3.	Jellyfish Hybrid Hydrogel	260
3.1.	Hydrogels synthesized with radiation method	262
3.2.	Hybrid hydrogels	262
3.3.	Toughening mechanism	264
4.	Conclusions and Outlook	268
	Acknowledgments	270
	References	270
12.	Mussel-Inspired Adhesive Biomaterials	273
	<i>Kyuri Kim, Seonki Hong and Haeshin Lee</i>	
1.	Introduction	273
2.	Mussel Adhesive Proteins	274
2.1.	Characterization of mussel adhesive proteins	274
2.1.1.	Mefp-1	274
2.1.2.	Mefp-3	276
2.1.3.	Mefp-5	277
2.1.4.	Mefp-2 and Mefp-4	277
2.1.5.	Mefp-6	278
2.2.	Adhesion mechanisms	278
2.3.	Poly(dopamine)	279
2.3.1.	Characteristics of poly(dopamine) coating	279
2.3.2.	Preparation of poly(dopamine)-coated substrates	280
2.3.3.	Cytotoxicity of poly(dopamine)	281
2.3.4.	Applications of poly(dopamine) coating	283
2.3.4.1.	Utilizing redox chemistry of ad-layers on poly(dopamine)	283
2.3.4.2.	Ad-layer formation on poly(dopamine) via chemical reactions	285
2.3.4.3.	One-pot surface immobilization	286
2.4.	Other catecholamine adhesive biomaterials	286
2.4.1.	Poly(norepinephrine)	286
2.4.2.	Application of poly(norepinephrine) in surface modification	287
2.4.3.	Poly(ethyleneimine)-catechol	288
2.4.4.	Chitosan-catechol	289
3.	Conclusions and Outlook	289

Acknowledgments	289
References	290
13. Biomimetic Protamine-Templated Silicification	293
<i>YanJun Jiang, Lei Zhang, Jiafu Shi, Jian Li, Dong Yang and Zhongyi Jiang</i>	
1. Introduction	294
2. Biomimetic Protamine-Templated Silicification	298
3. Synthesis of Hierarchically-Structured Silica-based Materials Using Biomimetic Protamine-Templated Silicification	301
3.1. Protamine-templated biomimetic hybrid capsules	301
3.2. Synthesis of silica-based materials through synergy between self-assembly and biomimetic silicification	303
3.3. Synthesis of capsules-in-bead scaffolds	304
3.4. Synthesis of silica-based materials through synergy between bioadhesion and biomimetic silicification	305
4. Protamine-Directed Syntheses of Other Kinds of Inorganic Materials	308
5. Conclusions and Outlook	317
Acknowledgments	318
References	319
14. Bionic Materials Based on Spectral Characteristics of Plant Leaves	321
<i>Biru Hu, Zhiming Liu, Yunqiu Li and Wenjian Wu</i>	
1. Introduction	321
2. Hyperspectral Characteristics of Plant Leaves and Their Bionics	322
2.1. Histological characteristics of plant leaves	323
2.2. Spectral characteristics of plant leaves and influencing factors	324
2.2.1. Spectral characteristics of plant leaves	324
2.2.2. Main factors influencing the reflectance spectral characteristics of plant leaves	328
2.2.2.1. Pigments	328
2.2.2.2. Tissue structure	330
2.2.2.3. Water	331
2.2.2.4. Other components	332
2.3. Histological and spectral characteristics of angiosperm petals	334

2.3.1.	Histological structures of angiosperm petals	334
2.3.2.	Spectral characteristics of angiosperm petals	335
2.4.	Application of hyperspectral imaging spectroscopy in plants and its bionic simulation	336
2.4.1.	Application of hyperspectral imaging spectroscopy in plants	336
2.4.2.	Spectral bionic simulation of plants	337
3.	The Plant Leaf Infrared Characteristics and Bionic Applications	339
3.1.	Plant leaf infrared characteristics	339
3.2.	Main factors influencing the infrared characteristics of plant leaves	341
3.2.1.	Atmospheric attenuation	342
3.2.2.	Emissivity	342
3.2.3.	Surface temperature	342
3.3.	The mechanism of regulation of the surface temperature of leaves by stomata transpiration	343
3.3.1.	Factors affecting stomata transpiration	343
3.3.2.	Photoreceptors regulating stomata movements	344
3.3.2.1.	Photoreceptors	344
3.3.2.2.	Important photoreceptors	344
3.3.2.3.	Structure of photoreceptors	345
3.3.3.	Signal transduction of cryptochromes	346
3.3.3.1.	The action mechanisms of plant cryptochromes	346
3.3.3.2.	Signal transduction and stomata movement	348
3.4.	Consideration on the bionic design inspired by stomata transpiration	349
4.	Conclusions	350
	References	351
15.	Bioinspired Design of Super-Antiwetted Interfaces	355
<i>Dongliang Tian and Lei Jiang</i>		
1.	Introduction	355
2.	Fundamental Theories	356
2.1.	Contact modes of the superwetted surface	356
2.2.	Dynamic wetting behavior and optimization design	357

3.	Bioinspired Super-Antiwetting Interfaces with Different Functions	358
3.1.	Bioinspired superhydrophobic surfaces	358
3.1.1.	Superhydrophobic surfaces with self-cleaning properties	358
3.1.2.	Superhydrophobic surfaces with enhancing water supporting force	360
3.1.3.	Superhydrophobic surfaces with antifogging/anti-icing properties	362
3.1.4.	Superhydrophobic surfaces with water collection properties	365
3.2.	Bioinspired multifunctional superhydrophobic surfaces	368
3.2.1.	Superhydrophobic surfaces with highly adhesive forces	368
3.2.2.	Superhydrophobic surfaces with anisotropic wetting properties	370
3.2.3.	Superhydrophobic surfaces with special optical properties	373
3.3.	Bioinspired superoleophobic surfaces	376
4.	Application of Bioinspired Super-Antiwetting Interfaces on Integrated Surfaces	379
4.1.	Oil-water separation	379
4.2.	Antibioadhesion	381
4.3.	Liquid printing	382
5.	Conclusions and Outlook	385
	Acknowledgments	385
	References	386
16.	Bioinspired Self-Healing Coatings	391
	<i>Xu Wang, Yang Li and Junqi Sun</i>	
1.	Introduction	391
2.	Methods to Self-Healing	392
2.1.	Extrinsic and intrinsic self-healing materials	392
2.2.	Autonomous and non-autonomous self-healing materials	395
3.	Self-Healing of Structural and Mechanical Properties of Coatings	397
4.	Towards Self-Healing Functions of Coatings	402
4.1.	Self-healing anticorrosive coatings	402

4.2. Bioinspired self-healing of superhydrophobic/ superoleophobic coatings	406
4.3. Restoration of electrical conductivity	411
5. Conclusions and Outlook	414
Acknowledgments	416
References	416

I-1

Esmail Jabbari, Editor-in-Chief, is currently Assistant Professor of Chemical and Biomedical Engineering at the University of Missouri, St. Louis, and holds his Ph.D. from Purdue University. He is currently working at the Biomimetic Corporation (St. Louis, MO, USA) and at University (Houston, TX, USA) and at the Clinic (Rochester, MN, USA). He has contributed to the field of biomimetic materials for applications in regenerative medicine and drug delivery. He received the Beren Rahn Award in Orthopedic Research from the AO Foundation in 2012 for his contribution to biomimetic orthopedic biomaterials and the Stephen B. Milam award from the Oral and Maxillofacial Surgery Foundation in 2013. He has published more than 180 books, journal papers, conference proceedings, book chapters, journal articles, and refereed conference presentations. He has given more than 100 invited lectures and more than 100 presentations at national and international conferences on biomimetic material, tissue engineering, and drug delivery. He is a member of numerous societies, including American Biomedical Materials Society, MRS, EMBS, ACS, AICHE, and ASME. He was elected as a Fellow of the American Institute of Medical and Biological Engineers (AIME) in 2013. His e-mail address is esmail.jabbari@che.slu.edu.

Deok-Ho Kim, Editor, is currently an Assistant Professor in the Department of Bioengineering at the University of Washington. He received his B.S. from POSTECH in 1998, the M.S. degree from Seoul National University in 2000 in Mechanical Engineering, and his Ph.D. degree in Biomedical Engineering from the Johns Hopkins University School of Medicine in 2004. From August 2004 to June 2005, he worked as a research scholar at the Korea Research Institute of Science and Technology (KIST), including the Biomimetic Research Center, the National Institute of Technology Evaluation (NITE). The current research aims to investigate how engineered microenvironments can direct cell growth and tissue regeneration. Several key research directions in this research program include biomimetic materials/devices for tissue formation, tissue engineering, tumor/stem/tumor cell niche engineering, and cell mechanotransduction. He has authored or co-authored over 50 journal papers, over 100 conference papers, and 10 book
