

CONTENTS

Preface	vii
About the Editors	xxi
About the Contributors	xxv
33. Bioinspired Cell Culture Bioreactors	909
<i>Matteo Moretti, Chiara Arrigoni, Arianna Lovati and Giuseppe Talò</i>	
1 Cartilage	910
1.1 Structure and function	910
1.2 Biomimetic bioreactors for cartilage tissue engineering	913
2 Tendon	918
2.1 Structure and function	918
2.2 Biomimetic bioreactors for tendon tissue engineering	921
3 Cardiovascular System	927
3.1 Structure and function	927
3.2 Biomimetic bioreactors for cardiovascular tissue engineering	930
4 Conclusions	938
References	939
34. Bioinspired Materials for Bone Regenerative Engineering	947
<i>Roshan James, Meng Deng, Sangamesh G. Kumbar and Cato T. Laurencin</i>	
1 Introduction	947
2 Bone: Composition and Design	948
3 Bone Grafts	951

4	Design of Bioinspired Bone Grafts	951
5	Bone Regeneration Inspired by Signaling Mechanisms and Molecules	959
6	Conclusions	964
	Acknowledgments	965
	References	965
35.	Bioinspired Muscle Tissue Devices	969
	<i>Toshinori Fujie, Serge Ostrovidov, Samad Ahadian, S. Prakash Parthiban, Ali Khademhosseini and Hirokazu Kaji</i>	
1	Introduction	970
2	Muscle Tissues	970
2.1	Skeletal muscle	971
2.2	Cardiac muscle	973
2.3	Smooth muscle	974
3	Experimental Strategy for Muscle Tissue Engineering	974
3.1	Microfabrication techniques	974
3.2	Control of muscle cell alignment	975
3.3	Microenvironmental control of myogenesis	976
4	Biomedical Application of Engineered Muscle Tissues	977
4.1	Implantable tissues	978
4.2	Drug-screening devices	979
4.3	Bioactuators	979
5	Conclusions and Outlook	981
	Acknowledgments	982
	References	982
36.	Biomimetic 3D Tissue Printing	985
	<i>Falguni Pati, Joydip Kundu, Jin-Hyung Shim and Dong-Woo Cho</i>	
1	Introduction	985
2	Development of 3D Tissue Printing Technologies	988
2.1	Inkjet-based tissue printing	990
2.2	Laser-assisted tissue printing	991
2.3	Extrusion-based tissue printing	992
3	Physical Approaches to Biomimetic 3D Tissue Printing	994
3.1	Mechanical properties	994
3.2	Architecture	995

3.3	Morphology	999
3.4	Modular hierarchical assemblies	1003
4	Chemical Approaches to Biomimetic 3D Tissue Printing	1004
4.1	Composition	1004
4.2	Functionalization/modification	1006
4.3	Signaling molecules presenting scaffolds	1007
5	Future Direction	1009
6	Conclusions	1010
	Acknowledgment	1011
	References	1011
37.	Biomimetic Human Lung Models	1017
	<i>Helen C. Harrington, Paul A. Cato and Amir M. Ghaemmaghami</i>	
1	Introduction	1017
2	Lung Physiology and Pathophysiology	1018
2.1	Conductive airway	1018
2.2	Respiratory airway	1020
3	Lung Disease	1020
3.1	Innate defense mechanisms in lung	1021
3.2	Airway remodeling	1022
4	Models of Respiratory Disease	1023
4.1	Pre-clinical <i>in-vitro</i> models	1025
4.2	3D Lung models	1027
4.3	Microenvironmental factors in the development of 3D models	1029
4.4	Natural polymers	1029
4.5	Synthetic polymers	1030
4.6	Physical conditioning within 3D cultures	1031
5	Conclusion	1032
	Acknowledgment	1033
	References	1033
38.	Biomimetic Materials for Cardiac Regeneration	1037
	<i>Alexander J. Hodge, Petra Kerscher, David A. Dunn and Elizabeth A. Lipke</i>	
1	Introduction	1037
2	Physiology of the Developing Heart	1038
2.1	Role of extracellular matrix in development	1039
2.2	Role of transcription factors in development	1041

3	Overview of Materials	1044
3.1	Considerations for the design of cardiac regenerating materials	1045
3.2	Biomimetic material properties for cardiac regeneration	1046
3.3	Classes of materials	1050
3.3.1	Natural materials	1050
3.3.2	Synthetic materials	1053
4	Biomimetic Materials Used in Cardiac Differentiation and Design of the Cardiac Stem Cell Niche	1054
4.1	Applications of biomimetic materials in cardiac stem cell niche design	1055
4.2	Applications of biomimetic materials in cardiac regeneration	1056
5	Engineered Myocardium for Drug Development and <i>in vitro</i> Research	1057
5.1	Tissue engineered myocardium for drug development	1058
5.2	Modeling diseased tissue using engineered myocardium	1059
6	Conclusions and Outlook	1061
	Acknowledgment	1061
	References	1061
39.	Biomimetic Regeneration of Corneal Tissue	1069
	<i>Li Buay Koh, Kimberley Merrett, Rodolfo Adrian Elizondo and May Griffith</i>	
1	Introduction	1069
2	Keratoprotheses	1070
2.1	Conventional keratoprotheses	1070
2.2	Keratoprotheses with biomimetic capabilities	1071
3	Biomimetic Corneal Substitutes	1072
3.1	Acellular corneal substitutes	1072
3.2	Cell seeded corneal substitutes	1075
3.3	Surface modified biomaterials as corneal substitutes	1078
4	Delivery of Therapeutic Agents by Biomimetic Corneal Substitutes	1082

5	Conclusions and Perspectives	1084
	References	1085
40.	Biomimetic Scaffolds for Musculoskeletal Tissue Engineering	1089
	<i>Brandon W. Engebretson and Vassilios I. Sikavitsas</i>	
1	Introduction	1089
1.1	Methods of scaffold modification	1090
1.2	Common molecules used in scaffold modification	1092
2	Scaffold Modifications for Bone Tissue Engineering	1093
3	Scaffold Modifications for Cartilage Engineering	1097
4	Scaffold Modifications for Tendon and Ligament Tissue Engineering	1102
5	Conclusions and Future Perspectives	1105
	References	1106
41.	Biomimetic Regeneration of Soft Tissues	1113
	<i>Mason J. Burger, Tajila Mullahkhel, Ian C. McPhee, Benjie R. Pease, Michael P.H. Lau and Leonard F. Pease III</i>	
1	Introduction	1113
2	Biomimetic Skin and Wound Healing	1115
2.1	Dermal substitutes	1116
2.2	Wound healing	1117
3	Biomimetic Vessels, Valves and Vasculature	1118
3.1	Mechanical pressure	1118
3.2	Stem cells and co-culture	1119
3.3	Multilayered and structured scaffolds	1120
3.4	Surface modification	1121
4	Biomimetic Ligaments and Tendons	1123
4.1	Anterior cruciate ligament, peridontal ligaments, and more	1123
4.2	Rotator cuff tendons, achilles tendons and more	1125
5	Biomimetic Muscle	1125
5.1	Artificial muscle	1126
5.2	Templated growth	1126
6	Biomimetic Nerves and Neurons	1128
6.1	Guiding regrowth	1129
6.2	Neuroprosthetics	1131

7	Biomimetic and Bioinspired Adipose Tissue	1132
8	Biomimetic Cartilage	1133
8.1	Structure and composition	1133
8.2	Load bearing and frictional	1135
9	Biomimetic Synovial Fluid	1136
10	Emerging Biomimetic & Bioinspired Tissue Replacements and Outlook	1137
	Acknowledgments	1139
	References	1139
42.	Bioinspired Nanotopographically-Defined Cell Culture Models	1149
	<i>Julie Antetomaso, Alex Jiao, Krystal Gauthier-Bell and Deok-Ho Kim</i>	
1	Introduction	1149
2	Fabrication Techniques for Nanotopographically-Defined Biomaterials	1151
2.1	Electron beam lithography	1151
2.2	Nanoimprinting lithography	1153
2.3	Capillary force lithography	1154
2.4	Electrospinning	1155
2.5	Polymer demixing and phase separation	1157
2.6	Colloidal lithography	1158
3	Cell Responses to Nanotopographical Cues	1158
3.1	Morphology	1159
3.2	Migration	1161
3.3	Proliferation	1162
3.4	Differentiation	1163
4	Application of Nanotopographically-Defined Substrates for Stem Cell and Tissue Engineering	1166
4.1	Cardiac tissue	1166
4.2	Neuronal cells	1167
4.3	Tendons and ligaments	1168
4.4	Vasculature	1168
4.5	Large area traumas	1169
5	Applications and Perspective	1170
	Acknowledgment	1172
	References	1172

43.	Bioinspired Liver Tissue Engineering	1177
	<i>Astrid Herrero, Sabine Gerbal-Chaloin and Martine Daujat-Chavanieu</i>	
1	Introduction	1177
2	Liver Morphology, Vascular and Biliary Anatomy	1178
2.1	Liver organization in lobes and segments	1178
2.2	Biliary tree	1181
3	Organization of the Hepatic Lobules	1182
4	Different Cell Types in the Hepatic Lobule	1183
4.1	Hepatocytes	1183
4.2	Sinusoids and liver sinusoidal endothelial cells	1185
4.2.1	Liver sinusoidal endothelial cells (LSEC)	1185
4.2.2	Hepatic stellate cells (HSC)	1186
4.3	Kupffer cells (KC)	1186
4.4	Pit cells or liver lymphocytes	1187
4.5	Cholangiocytes	1187
4.6	Liver stem cells and progenitor cells	1187
5	Extracellular Matrix and Interaction with Liver Cells	1188
5.1	Components of the extracellular matrix	1188
5.2	Interactions between liver cells and ECM	1189
6	Physiological Aspects	1189
6.1	Liver functions	1189
6.1.1	Detoxification function	1189
6.1.2	Protein metabolism and ureagenesis	1191
6.1.3	Lipid metabolism and bile acid production	1192
6.1.4	Carbohydrate metabolism	1193
6.1.5	Metabolic cross-talk	1193
6.2	Functional zonation of the hepatic lobule	1194
6.3	Liver blood circulation	1194
6.4	Liver innervation and impact on metabolism	1195
7	<i>In vitro</i> Models	1197
7.1	Introduction	1197
7.2	Available cell models	1198
7.2.1	Hepatic cell lines	1198
7.2.2	Hepatocytes	1199
7.2.3	Stem cells	1200

7.3	<i>In vitro</i> models based on hepatocyte culture systems	1203
7.3.1	Conventional monolayer culture of hepatocytes	1203
7.3.2	Sandwich cultures	1204
7.3.3	Extended applications	1205
7.4	Towards the development of organotypic models	1206
7.4.1	Culture of liver tissue	1206
7.4.2	Reconstruction of liver tissue	1207
7.4.2.1	Restoring cell-cell contacts and cell cooperation	1207
7.4.2.2	Favoring interactions with extracellular matrix and the 3D organization	1209
7.4.2.3	Improving the exchanges with the environment	1213
7.4.2.4	Integration in bioreactors	1214
7.5	Advanced technologies for tissue engineering	1215
7.5.1	Control of cell-cell interactions and cell positioning	1216
7.5.2	Mimicking the lobule environment	1218
7.5.3	Reconstruction of microvasculature and large scale tissue engineering	1219
7.6	Application in drug testing	1220
7.6.1	Drug metabolism and clearance	1220
7.6.2	Toxicity	1221
7.6.3	Animal or human body-on-a-chip	1222
7.7	Application in tissue replacement	1223
7.8	Application in physio-pathological studies	1226
8	Conclusion	1227
	Acknowledgments	1227
	References	1227
44.	Bioinspired 3D Scaffold for Inducing Differentiation of Embryonic Stem Cells	1241
	<i>Sha Jin, Xiuli Wang, Weiwei Wang and Kaiming Ye</i>	
1	Introduction	1241
2	Scaffolding for Induced Differentiation of ESCs	1243
3	Proliferation of Differentiated ESCs in the Collagen Scaffold	1244

4	Definitive Endoderm Differentiation from ESCs in Collagen Scaffold	1246
5	Insulin-producing Cell Clusters (IPCCs) Formation from ESC Differentiation in the Collagen Scaffold	1247
6	Potential Signaling Pathways in a 3D Culture	1252
7	Conclusions and Outlook	1254
	Acknowledgments	1255
	References	1255
45.	Bioinspired Engineered Matrix to Regulate Cancer Stem Cell Niche	1257
	<i>Esmail Jabbari</i>	
1	Introduction	1257
2	2D Cell Culture Systems	1260
3	3D Culture Systems with Naturally Derived Gels	1261
3.1	Matrigel	1261
3.2	Collagen	1262
3.3	Alginate and Chitosan	1263
3.4	Agar	1263
3.5	Methylcellulose	1264
4	Synthetic 3D Culture Systems	1265
5	Conclusions and Outlook	1271
6	Acknowledgments	1272
	References	1272
