Preface	vii
Acknowledgements	xi
List of Abbreviations	xiii
Chapter 1. What Is the Protein Folding Problem?	1
1.1 Problem A: Can We <i>Predict</i> the 3D Structure from the Sequence of Amino Acids?	5
1.2 Problem B: What Are the Main Factors that <i>Speed</i> and <i>Guide</i> the Folding of Proteins?	10
1.3 Problem C: What Are the Main Factors that Stabilize the Native Structure?	13
1.4 The Fundamental Equations Associated with the Processes of Folding and Unfolding	15

Chapter 2.	Why Has a Solution to the <i>PPF</i> Been So Elusive for So Long?	23
2.1	Target-based Versus Cause-based Approaches	23
2.2	The Search For an Absolute Minimum in the Gibbs Energy Landscape	31
2.3	The Myth of $H\phi O$ Dominance	53
Chapter 3.	What Are the Main Factors that Stabilize the Native Structure?	
	The Solution to the Stability Problem C	57
3.1	The Gibbs Energy Change in Protein Folding	58
3.2	Direct and Indirect Interactions . .	63
3.3	Dissecting the Solvent-induced Part of the Gibbs Energy Change . . .	66
3.4	Summary of the Factors Involved in the Stability of the Native Protein	71
Chapter 4.	What Are the Main Factors that <i>Guide</i> and <i>Speed</i> the Folding of a Protein?	
	The Answer to Mechanism Problem B	75
4.1	Clarifying Problem B	76
4.2	The Origin of the Forces Acting on the Protein, Direct and Indirect	80
4.3	The Forces Exerted on the Groups of the Protein	90

4.4	The Forces on a Protein and the Resulting Motion of the Protein	98
4.5	A Theoretical Framework Showing How Strong Forces Can Guide and Speed the Folding of a Protein . .	103
4.6	Conclusion	107
Chapter 5.	Is There a Folding Code? The Answer to Predictability Problem A	109
5.1	Can One "Read" the Structure in the Sequence?	111
5.2	Can One Compute the Structure Given an Arbitrary Sequence? . . .	119
5.3	Conclusion	123
Chapter 6.	Cold, Pressure and Solute Denaturation	125
6.1	Cold Denaturation	125
6.1.1	The Qualitative Reason for Cold Denaturation Temperature	134
6.1.2	A Simple Model Showing Both Heat and Cold Denaturation	137
6.1.3	Conclusion Regarding Cold Denaturation	145
6.2	Pressure Denaturation	147
6.3	Solute Denaturation	155
Appendix Aleph (N).	The Way I Envisage the Gibbs Energy Landscape of a Protein	161

Appendix A.	The Stability Condition for Chemical Equilibrium	169
Appendix B.	Does Dawkins' Monkey Explain Evolution?	171
Appendix C.	The Relationships between the Gibbs Energy Landscape, the Potential of Mean Force, and the Pair Correlation Function	175
Appendix D.	Non-Additivity of the Gibbs Energy Function	181
Appendix E.	Solvation and Conditional Solvation of $H\phi O$ and $H\phi I$ Groups	195
Appendix F.	Solvent-induced $H\phi O$ and $H\phi I$ Pair Interactions	217
Appendix G.	The Fact that $H\phi O$ Groups Are Buried in the Interior of the Protein Is True. Can We Conclude that the $H\phi O$ Effect Is the Cause for this Fact?	231
Appendix H.	Dissecting the Solvent-induced Effects in Protein Folding	235
Appendix I.	What Do We Mean by the Native Structure and the Denatured State of the Protein?	239

Appendix J.	A Simple Lattice Model Showing the Origin of $H\phi I$ Interaction and of Its Non-Additivity	245
Appendix K.	A Simple Markov Chain Model for a Process of Folding	259
Epilogue		267
Notes		271
