<i>Preface</i>	v
----------------------	---

Chapter 1

A Magician of Virology from Australia	1
The Shaping of a Biologist	2
Virus as an Organism	9
Phages and Receptors	11
Poliovirus	13
The Embryonated Hen's Egg	14
Pioneering Studies of Influenza Virus	16
Viruses Can Persist in Man	20
The Sherlock Holmes of Epidemiology	21
The Evaluations by Nobel Committees	25
Early Steps Towards Virus Chemoprophylaxis	26
Influenza Virus Grown in Eggs	28
Q Fever	28
Hemagglutination	29
The Weakening Candidacy	31
The Continued Studies of Receptors	32
The Golden Age of Virology and the Changing Science	34

Chapter 2

A Divided Nobel Prize and a New Era in Immunology	39
The Early Nobel Prizes in Immunology	40
From Virology to Immunology	46
Self and Non-self	46

Twin Calves.....	47
Instruction versus Selection.....	49
Clonal Selection.....	52
It Takes Two to Tango.....	54
A Multicultural Background.....	54
The Appeal of Oxford.....	55
Tissue Rejection Is an Immune Reaction.....	58
A Visit to Stockholm.....	59
Inbred Mice.....	60
Tolerance Unraveled.....	61
A Graft Can React Against the Host.....	64
The Nobel Committee Reviews the Discovery of Immunological Tolerance.....	64
A Bacteriologist Reviews Immunology.....	64
A Discovery Worthy of a Prize.....	67
Nominations in 1960.....	69
Sven Gard's Busy Summer.....	71
The Support for a Prize Amplified.....	73
Harmony but Breach of Consensus.....	76
The Nobel Events in 1960.....	77
The Post-Prize Engagements of Burnet and Medawar —	
Two Exceptional Statesmen of Science.....	82
Burnet, the Dystopian Visionary.....	83
Medawar — The Years of Hubris and the Rich Aftermath.....	86

Chapter 3

More Nobel Prizes in Immunology.....	89
The Origin of Lymphocytes Engaged in Immune Responses.....	90
The Lack of Recognition of the Discoveries of	
B and T Cells by a Nobel Prize.....	96
The Basic Structure of an Antibody.....	98
One Cell — One Antibody.....	103
One Antigen Selects a Swarm of Antibodies.....	107
The Richness of Antibodies Is Created by a Lottery System.....	110
Antibodies Cannot Penetrate into Cells.....	112
The Nobel Assembly and an Influential Secretary.....	113
An Embarrassed Newly Appointed Secretary.....	115

The Delayed Nobel Prize.....	117
The Cell-Bound Immunity Has an Unexpected Restriction.....	119
Innate Immunity Finally Recognized Again.....	122
Signalling Without Direct Cell Contacts.....	124

Chapter 4

Immunity, Infections and Transplantations.....	127
Inherited and Acquired Immune Defects.....	128
Personal Experiences of Major Health Challenges and Engagement in Research.....	130
The Evolutionary Interplay of Viruses and Their Hosts.....	132
General Remarks.....	133
Acute Virus Infections.....	134
Certain Viruses Can Evade an Immune Response.....	138
Persistent Virus Infections.....	140
The Eradication of a Virus Disease and a Virus Species.....	146
The Development in Tissue Transplantations in Humans.....	150
Transplantation of Solid Organs.....	151
Transplantation of Bone Marrow.....	153
A Committed Female Scientist.....	155
Complications of Medically Induced Immune Suppression.....	158
A Management of Bereavement.....	159

Chapter 5

Transgressing Borders in Science and Scenes of Life.....	161
The Assimilated Jew and the Budding Scientist.....	162
Rutherford's Laboratory.....	165
The Turmoil of the First World War.....	168
The First Stay with Bohr — The Hafnium Years.....	170
The Deliberations by the Nobel Committee on the Discovery of Hafnium.....	178
The Age of the Earth and the Rare Earth Elements.....	182
Years of Interlude in Freiburg.....	185
Return to Copenhagen — The Indicator Method Comes of Age.....	188
The Evaluation of the Indicator Method by the Nobel Committee.....	193
The Shadow of the Second World War.....	195
A Final Home Country.....	198

The Nobel Prize	203
Modern Tracer Techniques in Biology, Medicine and Archaeology	211
Life after the Nobel Prize	216

Chapter 6

Making Sense of Hearing	221
The Early Years of Studies	222
The Inner Ear Is So Beautiful that I Must Study It	224
The Swedish Connection	228
A Discovery that Caught the Ear of the Nobel Committee	231
The Decisive Year of 1961	236
The Prize Ceremony	238
A Different Kind of Nobel Lecture	241
A Meeting of Minds	243
Our Senses and Nobel Prizes	248
A Final Home in Hawaii; East Meets West	251
A Gracious Will	253

Chapter 7

Unraveling the Complexity of Protein Folding	257
The Great Sage	260
The Birth of a New Branch of Science	261
The Lady of Crystals	263
A Scientist Obsessed by Hemoglobin	265
Enter Kendrew	269
The Genius of Chemistry	271
Critical Turning Points in the Understanding of the Structure of Hemoglobin	273
Understanding the Structure of Myoglobin	276
The Delayed Nobel Prize to Hodgkin	277
Protein Crystallography Comes of Age	288
Towards the Finish Line	294
Life after the Nobel Prize	299
A Female Scientist and Humanist	299
A Great Science Administrator	300
A Scientist with Wide-Ranging Involvements	301

Chapter 8

"It's So Beautiful, You See, So Beautiful!"	307
The Great DNA Discovery	308
Biophysics at King's College	308
Watson's Arrival Upsets a Gentlemen's Agreement	311
The Rapid Developments of February 1953	315
Visitors Were Impressed	318
Time to Publish	319
The Role of Nucleic Acids Finally Appreciated	323
Amino Acid Changes Caused by Mutations May Lead to Disease	325
A Biochemist with a Particular Influence on the Nobel Work	326
Infectious Virus Nucleic Acid	327
Bragg Makes Strategic Nominations	332
The Review by a Crystallographer	333
The History of Crystallographic Studies of DNA	334
A Detour into the World of Virus Structures	336
Back to the Double Helix	337
Pauling Reflects on Nominations for the	
Discovery of the Structure of DNA	338
The Temperature Rises and a Powerful Nomination	339
Tiselius' Final Analysis	343
The Karolinska Institute — A Slow Starter that Won the Trophy	346
The First Review of the Discovery of the Structure of DNA	347
The Critical Year	351
Honest Jim and the Double Helix	352
The Short Life of a Devoted Scientist	353
The Background	354
Paris — Good Science and Good Life	355
From Coal to DNA	355
She Came So Close	357
The Attraction of Virus Structures	360
International Contacts	362
The Tragic End	366
Classification of Viruses	367
Wilkins or Franklin?	370
Crick and Klug Discuss Franklin's Qualifications as a Scientist	375
Three or Two?	377

Days of Festivities in December 1962.....	379
The Tallest Beacon among Molecular Biologists.....	382
Living for 60 Years with the Golden Helix.....	386
The Third Man Remained the Third Man.....	389
Franklin's Posthumous Recognition.....	389
What Is a Gene?.....	390
 <i>Chapter 9</i>	
Coda	395
Paradigmatic Discoveries.....	396
Genius Is a Fire that Lights Itself.....	400
The Importance of Lifestyle.....	405
The Driving Force in the Pursuit of Science.....	409
Internalism and Externalism.....	412
Science and Politics.....	414
Seeds and Deeds.....	416
 <i>References</i>	421
 <i>Index</i>	433
