

Contents

<i>Preface</i>	v
<i>Acknowledgments</i>	vii
1. Mathematics In-forms physics and physics Per-forms mathematics: comments <i>N. Kumar</i>	1
2. An incomplete summing up of Quantum Measurements <i>N.D. Hari Dass</i>	7
3. Predictive Information for Quantum Bio-Systems <i>Arun Kumar Pati</i>	19
4. Quantum Effects in Biological Systems <i>Sisir Roy</i>	27
5. Instabilities in sensory processes <i>J. Balakrishnan</i>	37
6. Active Cellular Mechanics and Information Processing in the Living Cell <i>M. Rao</i>	47

7. On the importance of length scales in determining the physics of biological systems 53
B. Ashok
8. q -Deformations and the dynamics of the larch bud-moth population cycles 65
Sudharsana V. Iyengar and J. Balakrishnan
9. Newtonian chimpanzees? A molecular dynamics approach to understanding decision-making by wild chimpanzees 81
Matthew Westley, Surajit Sen and Anindya Sinha
10. Quantum Probability — A New Direction for Modeling in Cognitive Science 103
Sisir Roy
11. Knowledge, its hierarchy and its direction 111
Apoorva Patel
12. Some remarks on Numbers and their Cognition 119
P. P. Divakaran
13. Conceptual Revolution of the 20th Century Leading to one Grand Unified Concept — The Quantum Vacuum 125
B. V. Sreekantan
14. Classical Coherence, Life and Consciousness 137
Partha Ghose
15. Consciousness — A Verifiable Prediction 145
N Panchapakesan

16. Gödel, Tarski, Turing and the Conundrum of Free Will <i>Chetan S. Mandayam Nayakar and R. Srikanth</i>	151
17. Mathematics and Cognition <i>Rajesh Kasturirangan</i>	167
<i>Index</i>	183
