Preface

xvii

1. Micromechanical Cues Converging on Fibroblasts, Cardiac Myocytes, and Stem Cells	1
<i>James R. Pinney, Golnar Doroudian, Patrick Chew, Tejal A. Desai, and Brenda Russell</i>	
1.1 Introduction	1
1.2 Fibroblasts	2
1.2.1 Microenvironmental Forces and Fibroblastic Remodeling	2
1.2.1.1 Mechanosensors in the cell membranes	4
1.2.1.2 Focal adhesion and integrin-mediated mechanotransduction	5
1.2.1.3 Cryptic ECM signaling domains	5
1.2.2 Fibroblasts and Topographical Cues	6
1.2.3 Fibroblasts in Tissue Engineering	8
1.3 Cardiomyocytes	9
1.3.1 Micromechanical Forces and Cardiomyocytes	9
1.3.1.1 Matrix stiffness and contraction	9
1.3.1.2 Costameres and focal adhesions	10
1.3.1.3 Cyclic and anisotropic strain and the sarcomere	10
1.3.2 Microtopography	11
1.3.3 Micromechanical Forces for Tissue Engineering	13
1.4 Stem Cells	13
1.4.1 Stem Cells and the Environment	13
1.4.2 Substrate Stiffness	14

1.4.3	Microtopography	14
1.4.4	Applied Micromechanical Forces	16
1.4.5	Stem Cells and Focal Adhesions	17
1.4.6	Proliferation	18
1.4.7	Stem Cells in the Cardiac Microenvironment	18
1.5	Summary and Conclusions	20
2.	How Microbes Sense and Respond to Force: A Single-Molecule View	35
	<i>Peter N. Lipke, Jürgen J. Heinisch, and Yves F. Dufrêne</i>	
2.1	Introduction	35
2.2	Atomic Force Microscopy of Live Cells	37
2.2.1	Live-Cell Imaging	37
2.2.2	Single-Molecule Detection and Manipulation	38
2.3	Protein Mechanics	39
2.3.1	Membrane Sensors	39
2.3.2	Cell Adhesion Proteins	42
2.4	Protein Clustering	44
2.4.1	Membrane Sensors	45
2.4.2	Cell Adhesion Proteins	46
2.5	Conclusions and Future Prospects	48
3.	Modulating Cell Adhesion by Non-Covalent Ligand Attachment	55
	<i>Andreas Müller, Christina Müller, and Tilo Pompe</i>	
3.1	Introduction	55
3.2	Viscous Properties of Cell Culture Substrates	57
3.2.1	Viscous Bulk Properties	57
3.2.2	Viscous Processes, Including Ligands	58
3.3	Non-Covalent Substrate-Ligand Interactions	58
3.3.1	Dissipation Processes during Ligand Sorption	58
3.3.2	Ligand Mobility	60

3.4	Cell Response to Non-Covalently Attached Adhesion Ligands	62
3.4.1	Characteristics of Cell Adhesion Sites in Response to Non-Covalently Attached Ligands in 2D	62
3.4.2	Fibronectin Matrix Remodeling during Cell Adhesion	63
3.4.3	Cell Force Balance on Gradually Mobile Ligands	64
3.4.4	Pattern Formation of Cell Adhesion Sites on Non-Covalently Attached Fibronectin	65
3.4.5	Influence of Ligand Attachment on Intracellular Signaling	68
3.5	Conclusion	69
4.	Traction Microscopy	75
	<i>Ramaswamy Krishnan, Dhananjay Tambe, Robert L. Steward, Corey C. Hardin, and James P. Butler</i>	
4.1	Introduction	75
4.2	What Are Traction?	76
4.3	How Are Traction Measured?	78
4.3.1	Wrinkling Assays	78
4.3.2	Beam-Bending Assays	78
4.3.3	Deformation Assays	79
4.4	How Are Traction Regulated?	81
4.4.1	Mechanical Stress Associated with Stiffness of the Extracellular Matrix	81
4.4.2	Mechanical Stress Associated with Thickness of the Extracellular Matrix	82
4.4.3	Mechanical Stress Associated with 3-D Deformation: Out-of-Plane Traction	83
4.4.4	Mechanical Stress Associated with Stretch of the Extracellular Matrix	83
4.4.5	Mechanical Stress Associated with Fluid Flow in the Extracellular Matrix	85

4.4.6	Mechanical Stress Associated with Neighboring Cellular Interactions	86
4.4.6.1	Cell-cell force measured from cell-substrate tractions	86
4.4.6.2	Plithotaxis: The principle of collective cell guidance	86
4.4.6.3	Kenotaxis: Traction regulation to fill unfilled space	88
4.5	Concluding Remarks	89
5.	Mechanical Regulation of Myofibroblasts: Mechanically Guided Matrix Remodeling and Prevention of Fibrosis in Regenerative Medicine	97
	<i>Jenna L. Balestrini and Boris Hinz</i>	
5.1	Introduction	97
5.2	What Fibroblasts Feel: Stretching Is Important Not to Get Stiff	98
5.3	The Myofibroblast—Dedicated to Produce and Remodel ECM	100
5.4	Mechanical Stretch in Wound Healing and Regenerative Medicine	104
5.4.1	Mechanical Intervention: Regulating Dermal Wound Healing through Stretch	104
5.4.2	Mechanical Stretch in Regenerative Medicine: Toward Building Functional Tissue Equivalents	104
5.4.3	Building Custom-Tailored Tissue Equivalents with Diverse Biomechanical Properties	105
5.4.4	Determining Optimal Loading Conditions for the Creation of Tissue Equivalents	106
5.4.5	Myofibroblasts in Tissue-Engineering: An Organ Specific Affair	107
5.5	Matrix Stiffness: Cues That Direct Both Cell Health and Dysfunction	109
5.5.1	Matrix Stiffness and Fibrosis: Artifact or Active Contributor to Pathology?	109

5.5.2	Controlling Stem Cell Fate: Utilizing Substrate Rigidity as a Tool in Regenerative Medicine	112
5.6	Conclusions and Perspective	113
6.	Interstitial Fluid Flow Mechanosensing: Mechanisms and Consequences	127
	<i>Arpit D. Shah and Adrian C. Shieh</i>	
6.1	Introduction	127
6.2	Basics of Interstitial Fluid Flow	128
6.2.1	Interstitial Flow Velocity	128
6.2.2	Starling's Equation	129
6.2.3	Darcy's Law and Brinkman's Equation	130
6.2.4	Shear Stress	131
6.2.5	Convective Mass Transport	132
6.3	Mechanisms of Interstitial Fluid Flow Mechanosensing	133
6.3.1	Glycocalyx Shear Stress Sensing	133
6.3.2	Autologous Gradient Formation	134
6.3.3	Matrix Tension and Integrin Activation	136
6.4	Effects of Interstitial Flow in Biological Systems	136
6.4.1	Blood Vessels	137
6.4.2	Lymphatic Vessels	138
6.4.3	Cancer	140
6.5	Conclusion	143
7.	Mechanical Properties of Cytoskeletal Structures and Their Response to Externally Applied Forces	155
	<i>Takahiro Watanabe-Nakayama, Shin'ichi Machida, Masakazu Saito, Rehana Afrin, and Atsushi Ikai</i>	
7.1	Introduction	155
7.2	Various Methods for Measurement of Mechanical Properties in Cells Using an AFM	157
7.2.1	Biochemically Modified Probes	158
7.2.2	Lateral Force Measurement	158

7.2.3	Hooking Probes	160
7.2.4	Bead-Glued Cantilevers	161
7.2.4.1	Introduction	161
7.2.4.2	Overview	161
7.2.4.3	Quantification of cellular mechanical response	163
7.2.4.4	Model for tension recovery	164
7.2.5	Micro Scoop Cantilever	166
7.3	Mechanosensing Proteins in Response to Mechanical Cues to Actin Cytoskeleton	169
7.3.1	Introduction	169
7.3.2	Transient Accumulation of Paxillin at Damaged Sites on SFs	169
8.	Shape and Mechanical Cues Underlying Cellular Homeostasis in Soft Organs	177
	<i>Jordi Alcaraz and Pere Roca-Cusachs</i>	
8.1	Introduction: Biochemical Cues Cannot Do It Alone	178
8.2	Overview of Tools to Study Cell Shape and Mechanics	179
8.2.1	Tools to Provide ECM Signaling to Cultured Cells: 2D versus 3D Cultures	179
8.2.2	Tools to Study Cell Shape	180
8.2.3	Tools to Study Mechanical Cues	181
8.3	Cell Shape: Regulatory Role and Mechanisms	183
8.3.1	Cell Shape and Proliferation	183
8.3.2	Cell Shape and Differentiation	184
8.3.3	Cell Shape, Chromatin Condensation, and Epigenetics	185
8.4	Tissue Mechanics: Mechanical Aspects and Molecular Regulators	186
8.4.1	ECM Mechanics and Turnover	187
8.4.2	Integrin ECM Receptors: Role in Force Transmission and Mechanoresponse	189

8.4.3	Mechanical Hallmarks of Cells	193
8.5	Integration of Form, Mechanics and Function: Emerging Molecular Players	196
8.5.1	$\alpha_3\beta_1$ Integrin and Differentiation	196
8.5.2	MMP14 and Collective Cell Invasion	197
8.5.3	TGF- β 1 and Repair	198
8.6	Aberrant Mechanical and Morphological Cues in Fibrosis and Cancer	199
8.6.1	Aberrant Features in Lung Fibrosis	200
8.6.2	Aberrant Features in Cancer	202
8.7	Translational Implications	204
9.	Muscle Contraction and Sarcomere Length Non-Uniformities	211
	<i>Walter Herzog</i>	
9.1	Background	211
9.2	The Cross-Bridge Theory	212
9.3	Limitations of the Cross-Bridge Theory	214
9.4	The Force–Length Relationship	215
9.5	Instability on the Descending Limb of the Force–Length Relationship	217
9.6	Sarcomere Length Non-Uniformity	218
9.7	Muscle Injury	219
9.8	Residual Force Enhancement and Sarcomere Length Non-Uniformity	220
9.9	The Smallest Contractile Unit of Muscle Contraction	224
9.10	Conclusions	227
10.	Microfluidic Modeling of Cancer Metastasis	235
	<i>Zeta Tak For Yu, Koh Meng Aw Yong, and Jianping Fu</i>	
10.1	Introduction	235
10.2	The Metastatic Process	237
10.2.1	Invasion	237
10.2.2	Circulating Tumor Cells	238

10.2.3	Colonization of Distal Sites	238
10.2.4	Conventional Technologies to Study Cancer Metastasis	239
10.3	Microfluidics for Studying Cancer Metastasis	241
10.3.1	Microfluidic Modeling of Epithelial-Mesenchymal Transition	242
10.3.2	Microfluidics for Capture and Informative Analysis of Circulating Tumor Cells	243
10.3.3	Microfluidics to Study Cancer Cell Migration	245
10.3.4	Microfluidic Tools to Study Interactions of Cancer Invasion, Intravasation, and Extravasation with the Microenvironment	246
10.3.5	Microfluidic Study of Cancer Cell Deformation	247
10.3.6	Microfluidic Modeling of Angiogenesis	248
10.3.7	Microfluidics for Cancer Imaging	248
10.4	Conclusion and Perspective	249
11.	Engineering Strategies to Recapitulate the Tumor Microenvironment	257
	<i>Andrew Rape and Sanjay Kumar</i>	
11.1	Introduction	258
11.2	Tumor-Microenvironment Interactions	260
11.2.1	Primary Tumor	260
11.2.2	Metastasis	262
11.3	Engineering the Cancer Microenvironment	263
11.3.1	Natural Matrices	264
11.3.2	Chemotaxis	266
11.3.3	Interstitial Pressure and Flow	268
11.3.4	Mechanical Properties of the Tumor	269
11.3.5	Tumor-Associated Fibroblasts	270
11.3.6	Angiogenesis	271
11.3.7	Extravasation	272

11.4	Future Directions and Conclusions	273
11.4.1	Next-Generation Matrices	273
11.5	Conclusions	276
12.	Micropost Methods for Cell Biomechanics of the Cardiovascular System	291
	<i>Kevin S. Bielawski and Nathan J. Sniadecki</i>	
12.1	Background on Cardiovascular System	292
12.2	Background on Microposts	292
12.2.1	Overview of Micropost Technology	293
12.2.2	Manufacturing Methods of Microposts	295
12.3	Cardiomyocytes Contract on Microposts	297
12.3.1	Power of Neonatal Cardiomyocytes Measured with Microposts	297
12.4	Endothelial Cells Produce Force on Microposts	299
12.4.1	Endothelial Cell Patterning on Microposts	299
12.4.2	Endothelial Cells in Pairs Studied Using a Bowtie Pattern	300
12.4.3	Transmigration of Leukocytes	301
12.4.4	Endothelial Cells Are Affected by the Type of Flow	302
12.5	Platelet Contraction with Microposts	304
12.5.1	Formation of Microclots on Microposts	305
12.5.2	Platelet Force Increases with Time and Thrombin Concentration	305
12.6	Future Directions in Micropost Methods for Cardiovascular Cell Studies	306
13.	Dynamic Mechanical Environments to Quantify and Control Cellular Dynamics	311
	<i>Luke MacQueen, Christopher Moraes, Yu Sun, and Craig A. Simmons</i>	
13.1	Introduction	312
13.2	Deformable Elastomeric Membranes	313

13.2.1	Biomechanics and Mechanobiology: There Is Plenty of Room in the Middle	314
13.2.2	Deformable Elastomeric Membranes: Operating Principles	316
13.2.3	Deformable Elastomeric Membranes: Microfabrication	317
13.2.4	Cell Stretching	318
13.2.5	Biomaterial Compression	321
13.3	Fluid Shear and Co-Cultures	323
13.3.1	Fluid Shear Forces and Endothelial Adhesion	325
13.3.2	Fluid Shear Forces and Endothelial Permeability	326
13.3.3	Cell-Cell Interactions and Fluid Flow	327
13.4	Conclusion	328
14.	Tip Growth in Walled Cells: Cellular Expansion and Invasion Mechanisms	335
	<i>Amir Sanati Nezhad and Anja Geltmann</i>	
14.1	Introduction	336
14.2	Tip Growth and Diffuse Growth: Two Examples on a Continuous Spectrum of Morphogenetic Patterns	336
14.2.1	The Geometry of Cellular Growth in Walled Cells	336
14.2.2	Spatial Regulation of Cell Wall Properties	340
14.2.3	Measuring Cell Wall Properties	342
14.2.4	Targeted Intracellular Transport: A Necessity for Cellular Morphogenesis	343
14.3	Tip Growth as a Tool for an Invasive Life Style	345
14.3.1	Plant Cell Growth within a Microenvironment	345
14.3.2	Driving Force for Invasion	347
14.3.3	Supplementary Tools to Overcome Mechanical Impedance	348

14.3.4	Target Finding	348
14.4	Conclusion	351
15.	Expansive Growth of Cells with Walls: Force Generation and Growth Regulation	357
	<i>Joseph K. E. Ortega, Jason T. Truong, Cindy M. Munoz, and Elena L. Ortega</i>	
15.1	Introduction	358
15.1.1	Expansive Growth and the Cell Wall	359
15.1.2	Turgor Pressure	361
15.1.3	Mechanical Behavior of the Wall and Relevant Molecular Mechanisms	364
15.1.4	Expansive Growth Process and Growth Zones	365
15.2	Mathematical Models	366
15.2.1	Augmented Growth Equations	367
15.2.2	Validation of the Augmented Growth Equations	369
15.2.3	Growth Rate Regulation	370
15.2.4	Utility and Limitations of the Augmented Growth Equations	371
15.2.5	System Models	371
15.2.6	Models for Morphogenesis	373
15.3	Summary, Future Research, and Conclusions	373
	<i>Index</i>	381
