<i>Preface</i>	xv
1 Dyneins: Ancient Protein Complexes Gradually Reveal Their Secrets	1
<i>Linda A. Amos and Keiko Hirose</i>	
1.1 Introduction	1
1.2 Dynein Molecular Structure Coming into View	2
1.2.1 Axonemal Arms	2
1.2.2 Dynein Molecules	8
1.2.3 Regulation of the Dynein Motility	12
1.2.4 Effect on the Heavy Chain of Vanadate and UV	13
1.2.5 Motility of Dynein	15
1.3 Evolution: Where Did Dyneins Come From?	16
1.3.1 AAA+ Proteins	16
1.3.2 Ancestors and Relatives of the Dynein Heavy Chain	17
1.3.3 CD-2 is Probably Similar to the Common Ancestor	18
1.3.4 Almost All Eukaryotic Organisms Express Dynein	20
1.4 Summary	21
2 Structural and Functional Analysis of the Dynein Motor Domain	37
<i>Tomohiro Shima and Takahide Kon</i>	
2.1 Introduction	37
2.2 AAA+ Ring as the Engine of Dynein	40
2.2.1 Dynein as a Member of the AAA+ Superfamily	40
2.2.2 ATPase Activities	42
2.2.3 Open and Closed Conformations	46

2.3	Movement of the Linker	46
2.3.1	Swing of the Linker	46
2.3.2	Role of the Linker in Dynein Movement	47
2.3.3	Structural Basis for the Linker Swing	50
2.4	Microtubule Binding at the Stalk	51
2.4.1	Binding Interface	51
2.4.2	Communication between the Stalkhead and the AAA+ Ring	51
2.4.3	Strut/Buttress	53
2.5	Coordination of the Linker Swing and On/Off from Microtubule	54
2.6	Perspectives	56
3	Electron Microscopy Studies of Dynein: From Subdomains to Microtubule-Bound Assemblies	67
	<i>Anthony J. Roberts, Katerina Toropova, and Hiroshi Imai</i>	
3.1	Introduction	67
3.2	Scale 1: The Dynein Heavy Chain	69
3.2.1	The Tail Domain	69
3.2.2	The Head Domain	71
3.2.2.1	The AAA+ ring	71
3.2.2.2	The C-terminal sequence	74
3.2.2.3	The linker domain	75
3.2.3	The Stalk Domain	77
3.3	Scale 2: Dynein Bound to Microtubules	79
3.3.1	The Stalkhead	80
3.3.2	Dynein Dimers	81
3.4	Scale 3: Regulatory Assemblies	84
3.4.1	Autoinhibition in Dynein Dimers	84
3.4.2	Activation by Dynactin and Cargo Adaptors	85
3.4.3	Regulation by Lis1	88
4	Subunit Architecture of the Cytoplasmic Dynein Tail	99
	<i>Muneyoshi Ichikawa, Yuta Watanabe, Takashi Murayama, Kei Saito, Takuya Kobayashi, Hitoshi Sakakibara, Takashi Ishikawa, and Yoko Y. Toyoshima</i>	
4.1	Introduction	100
4.2	Single Particle Analysis of the Cytoplasmic Dynein Tail Domain	101

4.3	Nanogold Labeling of the Tail Domain of Recombinant Human Dynein	105
4.4	New Model of the Subunit Architecture of the Cytoplasmic Dynein Tail	108
5	Measuring the Motile Properties of Single Dynein Molecules	117
	<i>Hideo Higuchi and Chikako Shingyoji</i>	
5.1	Axonemal Dynein	118
5.1.1	Structural Basis of Dynein Motile Activity	118
5.1.2	Roles of Mechanical Signal of Bending and the Central-Pair Microtubules in the Regulation of Dynein Activity in Beating Flagella	120
5.1.3	Effects of Bending on the Dynein Activity in Elastase-Treated Axonemes	123
5.1.4	Roles of Nucleotides in the Regulation of Dynein Activity in Beating Flagella	124
5.1.5	A Model for the Regulation of Dynein Activity in Beating Flagella	126
5.2	Force Generation of Axonemal Dynein and Microtubule Sliding	127
5.2.1	Measurement of Sliding Force	127
5.2.2	Coordinated Behavior of Dynein Molecules Under Mechanical Signals	130
5.3	Cytoplasmic Dynein	132
5.3.1	Processivity of Dynein Motility	132
5.3.2	Step Size of Dynein Movement on Microtubules	133
5.3.3	Force Measurement of Single Dynein Molecules via Optical Trapping	133
5.3.4	Activation of Inactive Dynein	135
5.3.5	Model of Dynein Walking	136
5.4	Vesicles Transport Driven by Dynein in Cells	137
5.4.1	Step Size of Dynein During Vesicles Transport in Cells	137
5.4.2	Motility of Vesicles Driven by Dynein in Cells	139
5.4.3	Force Generation by Dynein in Cells	140
5.4.4	In vivo Mechanical Measurement of Dynein	140
5.5	Summary of Motilities of Cytoplasmic Dynein	141

6 Mechanics of Dynein Motility	147
<i>Ahmet Yildiz</i>	
6.1 Introduction	147
6.2 Processive Movement of a Cytoplasmic Dynein Dimer	151
6.3 The Kinetics of a Dynein Step	153
6.4 The Role of AAA3 in the Stepping Cycle	156
6.5 Directional Movement Towards the Microtubule Minus End	158
6.6 Force Generation of Dynein	159
6.7 Dynein in Motor Tug-of-War	162
6.8 Future Directions	165
7 Interactions of Multiple Dynein Motors Studied Using DNA Scaffolding	175
<i>Nathan D. Derr</i>	
7.1 Introduction	175
7.2 DNA Scaffolding as a Method for Creating Dynein Ensembles	179
7.2.1 Introduction	179
7.2.2 DNA Origami Chassis	180
7.2.3 Oligonucleotide-Linked Dynein	183
7.2.4 Ensemble Formation	185
7.3 Ensembles of Dynein on DNA Scaffolds	185
7.3.1 Ensembles of Yeast Dynein	186
7.3.2 Ensembles of Mammalian Dynein	188
7.3.3 Effects of Cargo Compliance on Yeast Dynein Ensembles	190
7.4 Interactions of Dynein and Kinesin in Ensembles	192
7.4.1 Foundational Biophysics of Opposing Motors	193
7.4.2 Ensembles of Yeast Dynein and Kinesin	194
7.4.3 Ensembles of Mammalian Dynein and Kinesin	195
7.5 Outlook	196
8 Cytoplasmic Dynein Force Regulation in vitro and in vivo	205
<i>Caitlin L. Wynne and Richard B. Vallee</i>	
8.1 Introduction	205
8.2 Cytoplasmic Dynein Force Production	206
8.3 In vivo Force Production	209

8.4	Force Regulation by Lis1	210
8.4.1	Role of Lis1 in Dynein Force Regulation in vitro	211
8.4.2	Role of Lis1 in Dynein High-Load Function in vivo	213
8.4.3	Role of Lis1 in Force Adaptation in vivo	214
8.5	Role of Additional Force Regulators	215
8.6	Conclusions	216
9	Dynein in Endosome and Phagosome Maturation	225
	<i>Ashim Rai, Divya Pathak, and Roop Mallik</i>	
9.1	Introduction	226
9.2	Dynein Motility	227
9.2.1	Step Size and Processivity	227
9.2.2	Force	228
9.3	Dynein Teams	229
9.3.1	Dynein is Suited for Cooperative Function	229
9.3.2	How to Understand Collective Motor Function	229
9.4	Dynein in the Endocytic Pathway	231
9.4.1	Roles in Endocytosis	231
9.4.2	Recruitment to Endocytic Compartments	232
9.4.3	Implication for Pathogen Survival	235
9.5	Dynein in the Phagocytic Pathway	236
9.5.1	Phagosome Maturation Process	236
9.5.2	Phagosomes and Pathogens	237
9.5.3	Dynein and Membrane Lipids	237
9.5.4	Model Studies Using Latex Beads	238
9.6	Lipids, Bugs and Dynein: Happy to be Together?	240
10	Dynein in Intraflagellar Transport	251
	<i>Karl F. Lehtreck</i>	
10.1	Introduction	251
10.2	IFT Dynein during Intraflagellar Transport	253
10.2.1	The Assembly of IFT Trains	253
10.2.2	Protein Transport by IFT	256
10.3	Composition of IFT Dynein	257
10.4	Functional Studies on IFT Dynein	258
10.4.1	IFT Dynein in Ciliary Assembly and Disassembly	258

10.4.2	IFT Dynein in Ciliary Maintenance and Signaling	260
10.4.3	IFT Dynein in Flagellar Surface and Gliding Motility	262
10.4.4	Ciliobrevin as a Tool to Study IFT Dynein	263
10.5	IFT Dynein and Disease	264
10.6	Future Outlook	266
11	Diversity of <i>Chlamydomonas</i> Axonemal Dyneins	277
	<i>Toshiki Yagi and Ritsu Kamiya</i>	
11.1	Introduction	278
11.2	Biochemical Analyses	278
11.2.1	Separation of Individual Dyneins	278
11.2.2	Subunit Composition	279
11.2.2.1	Total gene assignment of axonemal dynein heavy chains	281
11.2.2.2	Phylogeny of axonemal dyneins	283
11.2.3	Available Mutants	284
11.2.4	Mutant Phenotypes	285
11.2.4.1	Mutants lacking any single type of dynein can swim slowly	285
11.2.4.2	Outer- and inner-arm dynein	285
11.2.4.3	Specific functions of certain types of dyneins	286
11.2.4.4	Function of individual heavy chains	287
11.2.4.5	Specific functions of certain types of dyneins	288
11.2.4.6	Regulation of dynein activity by tubulin modification	288
11.3	In vitro Motility Assays	289
11.3.1	General Features	289
11.3.2	ADP Sensitivity	291
11.3.3	Functional Interactions between Outer-Arm Heavy Chains	292
11.3.4	Novel Phenomena in Inner-Arm Dyneins	293
11.3.4.1	Microtubule bending	293
11.3.4.2	Ratchet-like properties	294
11.4	Conclusions and Outlook	294

12 Motility of Axonemal Dyneins	303
<i>Misaki Shiraga, Junya Kirima, Naoki Kanatani, Youské Shimizu, Hitoshi Sakakibara, and Kazuhiro Oiwa</i>	
12.1 Description of Axonemal Dyneins	304
12.2 Protein Preparations	309
12.2.1 Solutions for Preparation of <i>Chlamydomonas</i> Axonemal Dyneins	309
12.2.2 Preparation of <i>Chlamydomonas</i> Axonemal Dyneins	310
12.2.3 Preparation of Microtubules and Their Fluorescent Labeling	314
12.3 Motility of Axonemal Dyneins	315
12.3.1 Overview of in vitro Motility Assays	315
12.3.2 Preparation of a Flow Cell	319
12.3.3 In vitro Motility Assay of Inner-Arm Dyneins	320
12.3.4 Single-Molecule Measurements on Axonemal Dyneins	322
12.3.5 Preparation of Dynein-Coated Beads for Optical Trap Nanometry	323
12.3.6 Optical Trap Nanometry on Axonemal Dyneins	324
12.4 Findings About Axonemal Dyneins Obtained through Motility Assays	326
12.4.1 In vitro Motility Assays	326*
12.4.2 Optical-Trap Nanometry Studies on Dynein Motility	328
12.4.3 Alignment of Dynein Arms	330
12.4.4 Ensemble Behavior of Microtubules Driven by Dynein	333
12.4.5 In vitro Motility Assays for Study of Collective Behavior	336
12.5 Summary and Outlook	337
12.5.1 Levels of Coordination to Be Studied	339
13 Axonemal Dyneins in Cilia and Flagella	351
<i>Takashi Ishikawa</i>	
13.1 Introduction	351
13.2 Axoneme Structure	353

13.2.1	Microtubule Doublet	353
13.2.2	Methods for Axoneme Analysis	354
13.3	Outer and Inner Dynein Arrangement	355
13.3.1	96 nm Periodicity	355
13.3.2	Outer Arm	357
13.3.3	Inner Arm	358
13.3.4	Minor Dynein	359
13.3.5	Asymmetric Arrangement	360
13.4	Structure of the Regulators	361
13.4.1	Dynein f Intermediate and Light Chain Complex	361
13.4.2	Dynein and Radial Spokes	362
13.5	ATP-Induced Conformational Change	365
13.5.1	Linker Motion	365
13.5.2	Stalk Motion	365
13.5.3	Axonemal Dynein as Dimers	366
13.5.4	ODAs Along Microtubule Doublets	366
13.6	Outlook	367
14	Regulatory Mechanism of Axonemal Dynein	375
	<i>Kazuo Inaba</i>	
14.1	Introduction	375
14.2	Outer-Arm Dynein	377
14.2.1	<i>Chlamydomonas</i> and Other Unicellular Protists	377
14.2.1.1	Heavy chains	377
14.2.1.2	Intermediate chains	377
14.2.1.3	Light chains	378
14.2.1.4	Dynein docking complex	381
14.2.1.5	Proteins associated with outer-arm dynein	381
14.2.2	Outer-Arm Dynein from Sperm Flagella	382
14.2.2.1	Heavy chains	382
14.2.2.2	Intermediate chains	382
14.2.2.3	Light chains	383
14.2.2.4	Calaxin	383
14.2.2.5	Other outer-arm dynein related proteins	383

14.3	Inner-Arm Dyneins	385
14.3.1	<i>Chlamydomonas</i> Inner-Arm Dyneins	385
14.3.1.1	Subunits of dynein-f/I1	385
14.3.1.2	Subunits of other inner-arm dyneins	386
14.3.2	Inner-Arm Dyneins from Sperm Flagella	387
14.4	Regulatory Functions of Dynein Subunits in Ciliary and Flagellar Motility	387
14.4.1	Mechanical Feedback to Dynein Heavy Chain	388
14.4.2	Distribution of Dynein Heavy Chain Species with Different Properties Along the Axoneme	388
14.4.3	Protein Phosphorylation and Dephosphorylation	389
14.4.4	Ca ²⁺ -Dependent Regulation	390
14.4.5	Redox Poise	391
14.4.6	Nucleotide Metabolism	392
14.4.7	Post-translational Modification of Tubulins	392
14.4.8	Regulation by Structural Complexes Associated with Axonemal Dyneins	393
14.5	Comparison and Evolutionary Aspects of Axonemal Dynein Components	394
	<i>Index</i>	411
