<i>Preface</i>	xiii
I VIROLOGY: AN ECOLOGICAL PERSPECTIVE	1
1. What Is a Virus?	3
1.1. What Is a Virus?	3
1.2. Dimensions of Viral Biodiversity	7
1.3. Summary	22
2. Viral Life History Traits	24
2.1. Life History Traits in Ecology	24
2.2. Viral Life Cycle	25
2.3. Traits Associated with Lysis	28
2.4. Traits Associated with Lysogeny	39
2.5. Extracellular Traits	46
2.6. Summary	52
II POPULATION AND EVOLUTIONARY DYNAMICS OF VIRUSES AND THEIR MICROBIAL HOSTS	55
3. Population Dynamics of Viruses and Microbes	57
3.1. On Measurements and Models	57
3.2. Viruses and the "Control" of Microbial Populations	58
3.3. Viruses and Oscillatory Dynamics	74
3.4. Linking Microscopic Details with Dynamics	84
3.5. Summary	88
4. Evolutionary Dynamics of Viruses or Microbes, but Not Both	89
4.1. Viruses and the Nature of Mutation	89
4.2. The Effects of Viruses on Host Evolution	98
4.3. The Effects of Hosts on Viral Evolution	110
4.4. Summary	123

5. Coevolutionary Dynamics of Viruses and Microbes	125
5.1. From Sensitivity Relations to Coevolution	125
5.2. Toward "Novel" Coevolution: On the Probability of Compensating Mutations	129
5.3. The Effect of Coevolution on Host and Viral Population Dynamics	137
5.4. Ecological Effects on the Coevolutionary Dynamics of Types and Traits	146
5.5. Summary	159
 III VIRAL ECOLOGY IN THE OCEANS: A MODEL SYSTEM FOR MEASUREMENT AND INFERENCE	 161
6. Ocean Viruses: On Their Abundance, Diversity, and Target Hosts	163
6.1. Ways of Seeing	163
6.2. Counting Viruses in the Environment	165
6.3. Estimating Viral Diversity	175
6.4. Virus-Microbe Infection Networks	186
6.5. Summary	199
7. Virus-Host Dynamics in a Complex Milieu	201
7.1. Rosenblueth and Wiener's Cat	201
7.2. Many Viruses and Many Hosts	203
7.3. Nutrients and the Viral "Shunt"	213
7.4. Viruses and Grazers	219
7.5. Summary	235
8. The Future of Quantitative Viral Ecology	236
8.1. Current Challenges, in Theory	236
8.2. On the Future of Quantitative Viral Ecology	239
 TECHNICAL APPENDIXES	 245
A. Viral Life History Traits	247
A.1. Measuring Viral Life History Traits: A Quantitative Perspective	247
A.2. A Core Technique: The Plaque Assay	248
A.3. Protocols for Life History Trait Estimation	254
B. Population Dynamics of Viruses and Microbes	258
B.1. Host-Associated Life History Traits	258

B.2. Linear Stability Analysis of a Nonlinear Dynamical System	259
B.3. Implicit Resource Dynamics as a Limit of Explicit Resource Dynamics	269
B.4. On Poisson Processes and Mean Field Models	270
B.5. A Note on Simulating Dynamical Systems	272
B.6. Analysis of a Population Dynamics Model with Reinfection of Infected Hosts	276
C. Evolutionary Dynamics of Viruses or Microbes, but Not Both	278
C.1. Models of Independent Mutations Arising in the Growth of Populations	278
C.2. Invasion Criterion for Mutant Viruses with Distinct Life History Traits	280
C.3. Deriving the Canonical Equation of Adaptive Dynamics	281
C.4. Simulating Evolutionary Dynamics	283
D. Ocean Viruses: On Their Abundance, Diversity, and Target Hosts	286
D.1. Protocol for Automatic Estimation of Virus-Like Particles from Digital Images Derived from Epifluorescence Microscopy	286
E. Virus-Host Dynamics in a Complex Milieu	288
E.1. A Multitrophic Model to Quantify the Effects of Marine Viruses on Microbial Food Webs and Ecosystem Processes	288
<i>Bibliography</i>	293
<i>Index</i>	319
