Metabolic Regulation of pH in Plant Cells: Role of Cytoplasmic pH in Defense Reaction and Secondary Metabolism

Katsuhiko Sakano

I. Introduction	2
II. An Unquestioned Question: Why Proton System in Plants?	3
III. Metabolic Regulation of Intracellular pH	5
IV. Production and Consumption of Protons in Plant Metabolisms	21
V. Intracellular pH as Signal Transduction Component in Plant Cell-Pathogen Interaction	33
VI. Concluding Remarks and Prospects	37
References	38

Freeze-Substitution: Origins and Applications

Robert Shiurba

I. Introduction	45
II. Chemical Fixation—Interpretable Artifacts for Microscopy	47
III. History—From Freezing-Drying to Freeze-Substitution	49
IV. Freeze-Substitution	62
V. Future Strategies and Perspectives	75
Appendix	78
References	79

Myosins in Protists

R. H. Gavin

I. Introduction	97
II. Myosin Structure	99
III. Rhizopoda	102
IV. Dictyostelida	110
V. Other Protists	121
VI. Concluding Remarks	126
References	126

Genetic Regulation of Gravitropism in Higher Plants

Masao Tasaka, Takehide Kato, and Hidehiro Fukaki

I. Introduction	135
II. Gravitropic Mutants in <i>Arabidopsis thaliana</i>	137
III. Genetic Regulatory Mechanisms of Gravitropism	146
IV. Concluding Remarks	149
References	150

Biology of Kidney Cells: Ontogeny-Recapitulating Phylogeny

Vladimir R. Pantić

I. Introduction	156
II. Regulation of Genes Expression	157
III. Vascularization and Angiogenesis of Kidney	165
IV. Specificity of Kidney Cells	171
V. Responses of Defensive Mechanisms on Risk Factors	178
VI. Autoimmunity and Nephropathy	182
VII. Tumorigenesis as a Phenomenon of Cell Biology	194
VIII. Concluding Remark and Perspectives	203
References	204

Circadian Rhythms in Microalgae

Maria Mittag

I. Introduction	213
II. Circadian Programs in Cyanobacteria (Blue-Green Algae)	217

III. <i>Gonyaulax polyedra</i> , the Glowing Model Alga for Examination of Circadian Rhythms in Dinophyta	221
IV. <i>Euglena gracilis</i> , an Exemplary Alga for the Investigation of Circadian Biology in Euglenophyta	232
V. <i>Chlamydomonas reinhardtii</i> , the "Green Yeast" for Studying Circadian Clocks in Eukaryotic Algae	233
VI. Is There an Independent Oscillator in the Chloroplasts of Eukaryotic Microalgae?	237
VII. Molecular Mechanisms of Circadian Gene/Protein Expression: Common and Different Features	237
VIII. Concluding Remarks	240
References	241

Proadrenomedullin-Derived Peptides in the Paracrine Control of the Hypothalamo-Pituitary-Adrenal Axis

Gastone G. Nussdorfer

I. Introduction	250
II. Biology of Proadrenomedullin-Derived Peptides	251
III. ADM and PAMP and Their Receptors in the Hypothalamo-Pituitary-Adrenal Axis	255
IV. Effects of ADM and PAMP on the Hypothalamo-Pituitary-Adrenal Axis	259
V. Physiological and Pathophysiological Relevance of the Paracrine Actions of pADM-Derived Peptides on the Hypothalamo-Pituitary-Adrenal Axis	271
VI. Concluding Remarks	274
References	276
Index	285
