

ACKNOWLEDGMENTS

We wish to express our thanks to all our colleagues from France and abroad who contributed to this volume as well as to Mrs. S. Derouette and N. Rennard for the typing.

The experiments carried out in the editors' laboratory were supported by the Centre National de Recherche Scientifique over the past 30 years. The Research Committee of the Université Paris XII also contributed substantially over the past 15 years as well as several governmental and private agencies (DGRST, INSERM Fondation pour la Recherche Médicale Française, Ministère pour la Recherche et les Universités). Without their help neither the experiments nor this volume could have been completed.

We also wish to thank the staff of CRC Press and Ms. M. Baker for their help and the quality of this edition.
