

ACKNOWLEDGMENTS

Many people have helped with this book. Katie and Sarah Soltis read the chapters and provided input. Sarah also helped research topics and located important figures; her insights into art were also very important for Chapter 1, *Tree of Life in Ancient Human Culture and Art*. Special thanks to Evgeny Mavrodiev for researching selected topics, finding much-needed references, and assisting with some of the figures. Elena Mavrodieva drew one of the figures for Chapter 2, *History of the Modern Concept of the Tree of Life*. Many people provided valuable discussions and ideas. David Blackburn and Akito Kawahara provided information on cryptic species. Jack Payne provided the inspiration regarding the work of Kozlovsky. Ken Sassaman provided helpful discussions on Mayan and other cultures and their use of Tree of Life imagery. Sangtae Kim provided images of *Amborella*. Jeremy Lichstein helped with ecological references, figures, and ideas relating to ecological cascades. Brett Scheffers helped with information and a figure on the huge footprint of global climate change. Heather Rose Kates provided a figure as well as input on crop improvement. Robert Thacker provided information on sponges. David Steadman was invaluable in his help with information on bird extinction and conservation and provided an image used here. David Reed provided input and a tree figure on lice. Julie Allen and Kurt Neubig provided images for the study of biodiversity of Florida. Ryan Folk was instrumental in research and images for Saxifragales. James Rosindell provided high-resolution images of OneZoom. Stephen Smith read part of the text for Chapter 3, *Building the Tree of Life: A Biodiversity Moonshot*, and also provided Tree of Life images used here. Ross Purnell helped inspire the text on sport fishing and conservation in Chapter 5. Naziha Mestaoui, James Rosindell, Matt Gitzendanner, and Rob Guralnick have been amazing collaborators on the Tree of Life projection, *One Tree, One Planet*. Similarly, thanks to James Oliverio, Tim Difato, and others at the University of Florida's Digital Worlds Institute for showing the importance of animation in teaching the Tree of Life. Our research has been funded for nearly four decades by the National Science Foundation, and we truly appreciate this support. Thanks also to the University of Florida for funding. Many others have also been of great

help, including our students, postdocs, and lab visitors. Finally, a special thanks to the many colleagues with whom we have worked over many years in building and using the Tree of Life. That journey inspired this book.
