

Acknowledgments

We would like to dedicate this book to the memory of Dr. Hirotsugu Tsuruta (Hiro), a collaborator, mentor, and friend. Without him, this book would not have happened. He gave his time and knowledge, guiding our first steps in the field, and always pointing us forward. He was helped during that process by his colleagues at Stanford Synchrotron Radiation Lightsource (SSRL), Drs. Anne Martel, Tsutomu Matsui, and Thomas Weiss. We miss Hiro, his impact on us, and his impact on the field.

Closer to home, we would like to acknowledge the help and support of the staff at the Hauptman-Woodward Medical Research Institute in pursuing this research, in particular, Joseph Luft, who accompanied us on many SAXS trips, and the initial financial support of Dr. George DeTitta, with this enabling our first efforts. We thank Dr. Gaetano Montelione for providing many of our initial samples and Drs. Eric Phizicky and Elizabeth Grayhack as collaborators on structural studies incorporating small angle scattering. Outside of our institute, we have benefited from many useful discussions, including those with Drs. Richard Gililan, Angela Criswell, Robert Rambo, Michal Hammel, Greg Hura, and Arwen Pearson. We thank them and, in the case of Dr. Pearson, thank her students for so many comments and questions that we hope we have answered here. We thank Drs. Thomas Weiss, Lois Pollack, and Arwen Pearson for constructive comments along the way. We have been very appreciative of the Small Angle Scattering community in general for sharing much of their knowledge, advice, and encouragement. Our work has been enabled by funding from the Oishei Foundation and support from the National Institutes of Health and National Science Foundation.
