

## PREFACE

---

The chapters in this volume are based upon talks given at the symposium entitled, "Genes, species, and the threat of extinction: DNA and genetics in the conservation of endangered species," held at Princeton University on October 4, 1996 in honor of Princeton's Bicenquingenary. We are very grateful to the university, particularly to the 250th Anniversary fund, and to the Jane H. Fortune Distinguished Lectureship in Conservation Biology for providing funds for the symposium. The editors would also like to express their thanks to Tom Hagedorn for his help in producing this volume.
