

INTERNATIONAL
REVIEW OF CELL AND
MOLECULAR BIOLOGY

Volume 304

Edited by

KWANG W. JEON

University of Tennessee, Knoxville, TN, U.S.A.

International Review of Cell and Molecular Biology presents current advances and comprehensive reviews in cell and molecular biology—both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Praise for the Series

"Should be on the shelf of any biomedical library"

DOODY'S

"Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology...a valuable acquisition to any library."

THE NUCLEUS

Contents include

- Unisexual Cucumber Flowers, Sex and Sex Differentiation
- Energization of Vacuolar Transport in Plant Cells and its Significance Under Stress
- Roles of Substance P and ATP in the Subepithelial Fibroblasts of Rat Intestinal Villi
- Roles of Arginine Vasotocin Receptors in the Brain and Pituitary of Submammalian Vertebrates
- Roles of Poly (ADP-Ribose) Glycohydrolase in DNA Damage and Apoptosis
- Prospective Potency of TGF- β 1 on Maintenance and Regeneration of Periodontal Tissue
- Calcium Signaling in Extraembryonic Domains During Early Teleost Development
- New Insights into the Mechanism of Force Generation by Kinesin-5 Molecular Motors
- New Insights into the Functions of Histidine-Rich Glycoprotein
