

## Contents

### **A Backdrop: Principles of Plant Genome Organization**

*Andrew H. Paterson*

### **Evolution of Plant Genome Analysis**

*Daniel G. Peterson*

### **The Evolution of Plant Gene and Genome Sequencing**

*Stephen A. Goff, James C. Schnable, and Kenneth A. Feldmann*

### **The First Plant Genome Sequence – *Arabidopsis thaliana***

*Kenneth A. Feldmann and Stephen A. Goff*

### **The First Monocot Genome Sequence: *Oryza sativa* (Rice)**

*Hiroaki Sakai, Tsuyoshi Tanaka, Baltazar A. Antonio, Takeshi Itoh, and Takuji Sasaki*

### **Insights into the Common Ancestor of Eudicots**

*Jingping Li, Haibao Tang, John E. Bowers, Ray Ming, and Andrew H. Paterson*

### **Insights into the Common Ancestor of Cereals**

*Xiyin Wang, Hui Guo, and Jingpeng Wang*

### **Early History of the Angiosperms**

*Haibao Tang, Eric Lyons, and James Schnable*

### **Prehistory of the Angiosperms: Characterization of the Ancient Genomes**

*Yuannian Jiao and Hui Guo*

### **Decoding the Epigenomes of Herbaceous Plants**

*Robert J. Schmitz and Xiaoyu Zhang*

### **The Plant Microbiome**

*Marnie E. Rout*

### **Population Genomics of Plant Species**

*Khaled M. Hazzouri, Michael D. Purugganan, and Jonathan M. Flowers*

### **A Short Course on the Impact of Gene Duplications on the Evolution of Novelty**

*Michael Freeling*

### **Synthetic Haplotypes, Species, Karyotypes, and Protoorganisms?**

*Andrew H. Paterson*
