University of Tennessee, Knoxville, TN, U.S.A.

International Review of Cell and Molecular Biology presents current advances and comprehensive reviews in cell and molecular biology — both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Praise for the Series

"Should be on the shelf of any biomedical library" **DOODY'S**

"Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology... a valuable acquisition to any library."

THE NUCLEUS

Contents include

- The Nuclear Physique
- The Crowded Nucleus
- Crowding in Polymer-Nanoparticle Mixtures
- Crowding-Induced Formation and Structural Alteration of Nuclear Compartments: Insights from Computer Simulations
- Phase Separation as a Possible Means of Nuclear Compartmentalization
- Formation of Multi-Protein Assemblies in the Nucleus: The Spindle Assembly Checkpoint
- Characteristic Behavior of Crowding Macromolecules Confined in Cell-Sized Droplets
- Noncanonical Structures and their Thermodynamics of DNA and RNA Under Molecular Crowding: Beyond the Watson-Crick Double Helix
- Computational Models of Large-Scale Genome Architecture
- How Chromatin Looping and Nuclear Envelope Attachment Affect Genome Organization in Eukaryotic Cell Nuclei
- Crowding, Diffusion, and Biochemical Reactions
- Importance of Crowding in Signaling, Genetic, and Metabolic Networks
- Relevance and Limitations of Crowding, Fractal, and Polymer Models to Describe Nuclear Architecture
