LORENZO GALLUZZI

Weill Cornell Medical College, New York, NY, U.S.A.

International Review of Cell and Molecular Biology presents current advances and comprehensive reviews in cell and molecular biology — both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Praise for the Series

"Should be on the shelf of any biomedical library"

DOODY'S

"Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology... a valuable acquisition to any library."

THE NUCLEUS

Contents include

- Compartmentalization and Regulation of Sulfate Assimilation Pathways in Plants
- Insight Into the Role of Long Non coding RNA in Cancer Development and Progression
- Endogenous Mechanisms of Cardiac Regeneration
- NF- κ B Signaling as a Driver of Ageing
- Metabolic and Signaling Functions of Cancer Cell-Derived Extracellular Vesicles
- Mutually Supportive Mechanisms of Inflammation and Vascular Remodelling
- Pharmacological Actions of Glucagon-Like Peptide -1, Gastric Inhibitory Polypeptide, and Glucagon
- Interferon Beta: From Molecular Level to Therapeutic Effects
