University of Rome, Italy*

**International Review of Cell and Molecular Biology** presents current advances and comprehensive reviews in cell and molecular biology—both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

***Praise for the Series***

“Should be on the shelf of any biomedical library”

DOODY’S

“Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology...a valuable acquisition to any library.”

THE NUCLEUS

***Contents include***

- Regulation of autophagy by miRNAs
- Impact of miRNAs in cellular senescence
- miRNAs in hematopoiesis, stem cell biology and hematological disorders
- Impact of miRNAs on longevity
- miRNA deregulation in cardiovascular aging and associated disorders
- miRNA deregulation in aging-associated pathologies of the skeletal muscle
- miRNAs and neurodegeneration
