University of Rome, Italy*

International Review of Cell and Molecular Biology presents current advances and comprehensive reviews in cell and molecular biology—both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Praise for the Series

"Should be on the shelf of any biomedical library"

DOODY'S

"Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology...a valuable acquisition to any library."

THE NUCLEUS

Contents include

- MicroRNAs in DNA Damage Response, Carcinogenesis, and Chemoresistance
- MicroRNAs as Key Effectors in the p53 Network
- Impact of MicroRNAs in the Cellular Response to Hypoxia
- Understanding the Genomic Ultraconservations: T-UCRs and Cancer
- Following MicroRNAs Through the Cancer Metastatic Cascade
- MicroRNAs in Oncogenesis and Tumor Suppression
- MicroRNAs as Multifaceted Players in Glioblastoma Multiforme
