

INTERNATIONAL
REVIEW OF CELL AND
MOLECULAR BIOLOGY

Volume 329

Edited by
MASSIMO SANDAL

German Research School for Simulation Sciences, Aachen, Germany

International Review of Cell and Molecular Biology presents current advances and comprehensive reviews in cell and molecular biology—both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Praise for the Series

"Should be on the shelf of any biomedical library"

DOODY'S

"Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology...a valuable acquisition to any library."

THE NUCLEUS

Contents include

- From the Evolution of Protein Sequences Able to Resist Self-Assembly to the Prediction of Aggregation Propensity
- Protein Aggregation and Molecular Crowding: Perspectives From Multiscale Simulations
- Structural Characteristics of α -Synuclein Oligomers
- Effects of Intrinsic and Extrinsic Factors on Aggregation of Physiologically Important Intrinsically Disordered Proteins
- The Nucleation of Protein Aggregates - From Crystals to Amyloid Fibrils
- What Makes a Prion: Infectious Proteins From Animals to Yeast
- The Structure of Mammalian Prions and Their Aggregates
