

INTERNATIONAL REVIEW OF CELL AND MOLECULAR BIOLOGY

Volume 330

Edited by

LORENZO GALLUZZI

Weill Cornell Medical College, New York, NY, U.S.A.

International Review of Cell and Molecular Biology presents current advances and comprehensive reviews in cell and molecular biology—both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Praise for the Series

"Should be on the shelf of any biomedical library"

DOODY'S

"Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology...a valuable acquisition to any library."

THE NUCLEUS

Contents include

- New Insights Into the Roles of Retinoic Acid Signaling in Nervous System Development and the Establishment of Neurotransmitter Systems
- AMBRA1, a Novel BH3-Like Protein: New Insights Into the AMBRA1-BCL2-Family Proteins Relationship
- Rationale for the Combination of Dendritic Cell-Based Vaccination Approaches with Chemotherapy Agents
- Sinac Mimetics to Therapeutically Target IAP Proteins in Cancer
- Consequences of Keratin Phosphorylation for Cytoskeletal Organization and Epithelial Functions
- Plastid Protein Targeting: Preprotein Recognition and Translocation
- Immunomodulatory Activity of VEGF in Cancer
